

EXCHANGE RATES

The following table provides the noon buying rates for Japanese yen, expressed in Japanese yen per \$1.00 in New York City for cable transfers in foreign currencies. As of June 17, 2016, the noon buying rate for Japanese yen was ¥104.20 = \$1.00. No representation is made that the yen or dollar amounts referred to herein could have been or could be converted into dollars or yen, as the case may be, at any particular rate or at all.

	Year Ended March 31,				
	2012	2013	2014	2015	2016
	(Yen per dollar)				
Yen per dollar exchange rates:					
High	¥85.26	¥96.16	¥105.25	¥121.50	¥125.58
Low	75.72	77.41	92.96	101.26	111.30
Average of the last days of the months	78.86	83.26	100.46	110.78	120.13
At period-end	82.41	94.16	102.98	119.96	112.42

The following table provides the high and low noon buying rates for yen, expressed in yen per \$1.00, during the months indicated.

	High	Low
2015		
December	¥123.52	¥120.27
2016		
January	¥121.05	¥116.38
February	121.06	111.36
March	113.94	111.30
April	112.06	106.90
May	110.75	106.34

RISK FACTORS

Investing in our securities involves risks. You should carefully consider the risks described below as well as all the other information in this annual report, including, but not limited to, our consolidated financial statements and related notes and "Item 11. Quantitative and Qualitative Disclosures about Market Risk." Our business activities, financial condition and results of operations and the trading prices of our securities could be adversely affected by any of the factors discussed below or other factors. This annual report also contains forward-looking statements that involve uncertainties. Our actual results could differ from those anticipated in these forward-looking statements as a result of various factors, including, but not limited to, the risks faced by us described below and elsewhere in this annual report. See "Forward-Looking Statements." Forward-looking statements in this section are made only as of the filing date of this annual report.

1. Risks Related to our External Environment

(1) Global economic weakness and instability could adversely affect our business activities, financial condition and results of operations

Our business is affected by general economic conditions and financial conditions in Japan and in foreign countries.

The world economy has been suppressed with low level of growth due primarily to falling commodity prices such as the price of crude oil and fluctuations in financial markets. Moderate economic growth is expected

among developed countries. Meanwhile, economic growth in emerging and developing countries is expected to be weak overall and disparity in economic growth among such countries continues to widen. In addition, political and geopolitical tensions in certain regions need to be monitored carefully.

The Japanese economic outlook is becoming increasingly unclear due primarily to economic slowdown in emerging countries and the adoption of negative interest rate policy by the Bank of Japan in the second half of the fiscal year despite positive corporate earnings during the first half.

Despite our attempts to minimize our exposure to an unstable economic climate through, for example, improving risk management procedures, future instability in the global economy could adversely affect our business activities, financial condition and results of operations.

(2) We may lose market share or suffer reduced profitability as a result of competition based on pricing and other terms

We compete on the basis of pricing, transaction structure, service quality and other terms. It is possible that our competitors may seek to compete aggressively on the basis of pricing and other terms through their advantageous funding costs or without regard to their profitability. As a result of such aggressive competition by our competitors, our market share or our profitability may decline.

(3) Negative rumors could affect our business activities, financial condition, results of operations and share price

Our business is built upon the confidence of our customers and market participants. Whether based on facts or not, negative rumors about our activities, our industries or the parties with whom we do business could harm our reputation and diminish confidence in our business. In such an event, we may lose customers or business opportunities, which could adversely affect our business activities, financial condition and results of operations, as well as our share price.

(4) Our business may be adversely affected by economic fluctuations and political disturbances

We conduct business operations in Japan as well as in the United States, Asia excluding Japan, Oceania, the Middle East and Europe. Outside Japan, we have large operations in the United States, Asia, Oceania and Europe. Shifts in commodity market prices and consumer demand, political instability or religious strife in these and other regions could adversely affect our business activities, financial condition and results of operations.

(5) Our business activities, financial condition and results of operations may be adversely affected by unpredictable events

Our business activities, financial condition and results of operations may be adversely affected by unpredictable events or any continuing effects caused by such events. Unpredictable events include man-made events, such as accidents, war, terrorism and insurgency, and natural events, such as earthquakes, storms, tsunamis, fires and outbreaks of infectious diseases. If any such event occurs, it may, among other things, cause unexpectedly large market price movements or an unexpected deterioration of economic conditions in a country or region. If such a sudden and unpredictable event occurs, our business activities, financial condition and results of operations may be adversely affected.

(6) Dispositions of Shares may adversely affect market prices for our Shares

As of June 21, 2016, four of our shareholders have filed large shareholder reports pursuant to the Financial Instruments and Exchange Act ("FIEA") indicating, at the time of filing, beneficial ownership, as that term is used in the FIEA, of more than five percent of the total number of our outstanding Shares by the relevant

[Table of Contents](#)

shareholder. Additionally, our shareholders may, for strategic, investment or other reasons, decide to reduce their shareholdings in ORIX. Dispositions of Shares, particularly dispositions of large numbers of Shares by major shareholders, may adversely affect market prices for our Shares. For information on major shareholders, see “Item 7. Major Shareholders and Related Party Transactions.”

If foreign investors reduce their investment in Japanese stocks due to changes in the global economy or political conditions, our share price could be adversely affected because a large percentage of our shares are owned by investors outside of Japan.

2. Credit Risk

Our credit-related costs might increase

We maintain an allowance for doubtful receivables on direct financing leases and probable loan losses. However, we cannot be sure that the allowance will be adequate to cover future credit losses. This allowance may be inadequate due to unexpected adverse changes in the Japanese and overseas economies in which we operate, or deterioration in the conditions of specific customers, industries or markets.

We constantly strive to improve our portfolio management, however, we may be required to make additional provisions in the future depending on the economic trends.

Furthermore, if adverse economic or market conditions affect the value of underlying collateral and guarantees, our credit-related costs other than the allowance might increase. If we need to increase our allowance for doubtful receivables on direct financing leases and probable loan losses, or our credit-related costs other than the allowance increase as a result of these changes or events, our business activities, financial condition and results of operations could be adversely affected.

3. Business Risk

(1) We are exposed to risks from our diverse and expanding range of products and services, acquisitions of companies and assets, and entry into joint ventures and alliances

We continue to expand the range of our businesses in Japan and overseas, including through acquisitions of companies and businesses. Such expansion may expose us to new and complex risks that we may be unable to fully control or foresee, and, as a result, we may incur unexpected and potentially substantial costs or losses. In addition, we may not achieve targeted results if business opportunities do not develop or increase as expected or if competitive pressures undermine profitability.

As part of our business expansion, we may acquire companies or businesses. If the results of operations of an acquired company or business are lower than what we expected at the time we made such acquisition, we could be required to make large write-downs of goodwill or other assets.

Our subsidiaries and affiliates have a wide range of business operations, including operations that are very different from our financial services business. If we fail to manage our investee companies effectively, we may experience financial losses as well as losses of future business opportunities. In addition, we may not be able to sell or otherwise dispose of investments at times or prices we initially expected or at all. We may also need to provide financial support, including credit support or equity investments, to some investee companies if their financial condition deteriorates.

From time to time we also enter into joint ventures and other alliances, and the success of these alliances is often dependent upon the operational capabilities, the financial stability and the legal environment of our counterparties. If an alliance suffers a decline in financial condition or is subject to operational instability because of a change in applicable laws or regulations, we may be required to pay in additional capital, reduce our investment at a loss, or terminate the alliance.

If any such events occur, our business activities, financial condition and results of operations may be adversely affected.

(2) We are exposed to risks related to asset value volatility

We invest in ships, aircraft, real estate and other assets in Japan and overseas. The market values of our investments are volatile and may decline substantially in the future.

Valuation losses of our assets are recorded based on the fair market values at the time when revaluation is conducted in accordance with applicable accounting principles. However, losses from the sale of these assets, including as a result of a sudden need for liquidity, may exceed the amount of recorded valuation losses.

We estimate the residual value for certain operating leases at the time of contract. Our estimates of the residual value of equipment are based on current market values of used equipment and assumptions about when and to what extent the equipment will become obsolete; however, we may need to recognize additional valuation losses if our estimates differ from actual trends in equipment valuation and the secondhand market, and we may incur losses if we are unable to collect such estimated residual amounts.

If any event described above occurs, our business activities, financial condition and results of operations may be adversely affected.

(3) Risks related to our other businesses

We operate a wide range of diversified businesses in Japan and overseas, including financial services business.

Entry into new businesses, and the results of operations following such entry, are accompanied by various uncertainties, and if any unanticipated risk does occur, it may adversely affect our business activities, financial condition and results of operations.

4. Market Risk

(1) Changes in market interest rates and currency exchange rates could adversely affect our assets and our business activities, financial condition and results of operations

Our business activities are subject to risks relating to changes in market interest rates and currency exchange rates in Japan and overseas. Although we conduct asset-liability management ("ALM"), changes in the yield curve could adversely affect our results of operations.

When fund procurement costs increase due to actual or perceived increases in market interest rates, financing lease terms and loan interest rates for new transactions may diverge from the trend in market interest rates.

Changes in market interest rates could have an adverse effect on the credit quality of our assets and our asset structure. For example, with respect to floating-rate loan assets, if market interest rates increase, the repayment burdens of our customers may also increase, which could adversely affect the financial condition of such customers and their ability to repay their obligations to us. Alternatively, a decline in interest rates could result in increased prepayments of loans and a decrease in our assets.

Though we enter into derivative investments to hedge our market interest and currency risks, we may not be able to perfectly hedge against all risks arising from our business operations in foreign currencies and overseas investments. As a result, a significant change in interest rates or currency exchange rates could have an adverse impact on our business activities, financial condition and results of operations.

(2) Our use of derivatives may adversely affect our business activities, financial condition and results of operations

We use derivative instruments mainly to reduce fluctuations in the value of our investment portfolio and to hedge against interest rate and currency risks. However, it is possible that this risk management strategy may not be fully effective in all circumstances due to our operations failing to grasp their value or executing them properly or at all, or our failure to achieve the intended results of such hedging results due to the unavailability of offsetting or roll-over transactions under sudden turbulence in the market. Furthermore, our derivatives counterparties could fail to honor the terms of their contracts with us. Our derivative transactions may also be adversely affected in case our credit ratings are downgraded.

Our use of derivatives may adversely affect our business activities, financial condition and results of operations.

(3) Fluctuations in market prices of stocks and bonds may adversely affect our business activities, financial condition and results of operations

We hold investments in shares of private and public company stock, including shares of our equity method affiliates, and bonds, in Japan and overseas. The market values of our investment assets are volatile and may decline substantially in the future. A significant decline in the value of our investment assets could adversely affect our business activities, financial condition and results of operations.

5. Liquidity Risk (Risk Relating to Fund Procurement)

Our access to liquidity and capital may be restricted by economic conditions, instability in the financial markets or changes in our credit ratings

Our primary sources of financing include: borrowings from banks and other institutional lenders, funding from capital markets (such as through issuances of bonds, medium-term notes or commercial paper ("CP") and securitization of leases, loans receivables and other assets) and deposits. Such sources include a significant amount of short-term debt, such as CP and other short-term borrowings from various institutional lenders, and the portion of our long-term debt maturing in the current fiscal year. Some of our committed credit lines require us to comply with financial covenants.

Adverse economic conditions or financial market instability, among other things, may adversely affect our ability to raise new funds or to renew existing funding sources, and may subject us to increased funding costs or credit market volatility. If our access to liquidity is restricted, or if we are unable to obtain our required funding at acceptable costs, our business activities, financial condition and results of operations may be significantly and adversely affected.

We obtain credit ratings from ratings agencies. Downgrades of our credit ratings could result in increases in our interest expenses and could have an adverse effect on our fund-raising ability by increasing costs of issuing CP and corporate debt securities, decreasing investor demand for our securities, increasing our bank borrowing costs or reducing the amount of bank credit available to us. As a result, our business activities, financial condition and results of operations may be significantly and adversely affected.

6. Legal Risk

(1) A failure to maintain adequate controls to comply with regulations may harm our reputation and adversely affect our business activities, financial condition and results of operations

Our business and employees in Japan are subject to laws, as well as regulatory oversight by government authorities who implement those laws, relating to the various sectors in which we operate. These include laws and regulations applicable to specific industries, such as the Moneylending Business Act, the Installment Sales

[Table of Contents](#)

Act, the Insurance Business Act, the Banking Act, the Trust Business Act, the Building Lots and Buildings Transaction Business Act and the Building Standards Act, as well as laws applicable to our business activities, such as the Companies Act, the Financial Instruments and Exchange Act, the Act on Prohibition of Private Monopolization and Maintenance of Fair Trade and the Act on the Protection of Personal Information.

Our businesses outside of Japan are also subject to the laws and regulations of the jurisdictions in which they operate and are subject to oversight by the regulatory authorities of those jurisdictions. For example, in addition to being subject to U.S. securities laws, we are also subject to the USA Patriot Act, which prohibits us from entering into any transactions with countries listed as state sponsors of terrorism, and the U.S. Foreign Corrupt Practices Act, which prohibits us from offering bribes to foreign public servants.

In addition, certain of our businesses are subject to industry-specific laws and regulations requiring, among other things, that each company conduct independent operations and maintain financial soundness and appropriateness of business activities. A total or partial suspension of operations or the revocation of one or more of our licenses may adversely affect our business activities, financial condition and results of operations.

Our efforts to implement thorough internal controls for compliance and legal risk management to prevent violations of applicable laws and regulations, may not be fully effective in preventing all violations. In addition, we engage in a wide range of businesses, and our expansion into new businesses through acquisitions may require us to revise or cause our current internal controls to cease to function adequately. In such cases, we may be subject to sanctions or penalties, which could apply to our officers or employees, if we fail to revise them properly or at all. Such events could adversely affect our business activities, financial condition, results of operations and reputation.

Regardless of whether we have violated any laws, if we become the subject of a governmental investigation, litigation or other proceeding in connection with our businesses, our business activities, financial condition and results of operations may be adversely affected.

(2) Enactment of, or changes in, laws, regulations and accounting standards may affect our business activities, financial condition and results of operations

Enactment of, or changes in, laws and regulations may affect the way that we conduct our business, the products or services that we may offer, as well as our customers, borrowers, invested companies and funding sources. Such enactment or changes may cause our costs to increase, or if relating to accounting standards, may significantly affect how we record and report our financial condition and results of operations, even if our underlying business fundamentals remain the same. As a result of such enactment or changes, our business activities, financial condition and results of operations could be adversely affected.

7. Operational Risk

(1) Failures in our computer and other information systems could interfere with our operations and damage our business activities, financial condition and results of operations

We use information systems for financial transactions, personal information management, business monitoring and processing and as part of our business decision-making and risk management activities. Some of these information systems may be outsourced.

System shutdowns, malfunctions or failures, the mishandling of data or fraudulent acts by employees, vendors or other third parties, or infection by a computer virus, could have adverse effects on our operations, by causing, for example, delays in the receipt and payment of funds, the leak or destruction of confidential or personal information of our customers or employees, the generation of errors in information used by our management for business decision-making and risk management evaluation and planning, or the suspension of certain products or services we provide to our customers. In such event, our liquidity or the liquidity of customers who rely on us for financing or payment could be adversely affected.

Our information system equipment could suffer damage from a large-scale natural disaster or from terrorism, such as hacking or other unauthorized access. If networks or information systems fail, we could experience interruption of business activity, delay in the receipt and payment of funds, or substantial costs for recovery of functionality. As a result, our business activities, financial condition and results of operations may be adversely affected.

(2) We may not be able to hire or retain qualified personnel

Our businesses require a considerable investment in human resources and the retention of qualified personnel in order to successfully compete in markets in Japan and overseas. If we cannot develop, hire or retain the necessary qualified personnel, our business activities, financial condition and results of operations may be adversely affected.

(3) If our internal control over financial reporting is insufficient, our share price, reputation and business activities may be adversely affected

We have established and assessed our internal control over financial reporting in a manner intended to ensure compliance with the requirements of various laws and regulations. However, in future periods we or our independent registered public accounting firm may identify material weaknesses in our internal control over financial reporting, and such finding may cause us or our accountants to disclose that our internal control over financial reporting are ineffective, which could cause a loss of investor confidence in the reliability of our financial statements and cause our share price to fall. As a result, our business activities, financial condition and results of operations may be adversely affected.

(4) Our risk management may not be effective

We continuously seek to improve our risk management function. However, due to the rapid expansion of our business or significant changes in the business environment, our risk management may not be effective. As a result, our business activities, financial condition and results of operations could be adversely affected.

(5) Other operational risks

Our business entails many types of operational risks. Examples include inappropriate sales practices; inadequate handling of client and customer complaints; inadequate internal communication of necessary information; misconduct of officers, employees, agents, franchisees, trading associates, vendors or other third parties; errors in the settlement of accounts and conflicts with employees concerning labor and workplace management.

When we offer new products or services, we must ensure that we have the capacity to properly undertake and perform such operations. If we are unable to do so successfully, we may lose the confidence of the market and our customers which may cause us to suffer decreased profitability or force us to withdraw from such operations.

Our management attempts to control operational risk and maintain it at a level that we believe is appropriate. However, operational risk is part of the business environment in which we operate, and despite our control measures, our business activities, financial condition and results of operations may be adversely affected at any time due to this risk. Even if we do not incur direct pecuniary loss, our reputation may be adversely affected.

8. Risks Related to Holding or Trading our Shares and ADRs

(1) Rights of shareholders under Japanese law may be different from those under the laws of other jurisdictions

Our Articles of Incorporation, the regulations of our board of directors and the Companies Act govern our corporate affairs. Legal principles relating to matters such as the validity of corporate procedures, directors' and

officers' fiduciary duties and shareholders' rights are different from those that would apply if we were incorporated elsewhere. Shareholders' rights under Japanese law are different in some respects from shareholders' rights under the laws of jurisdictions within the United States and other countries. You may have more difficulty in asserting your rights as a shareholder than you would as a shareholder of a corporation organized in a jurisdiction outside Japan. For a detailed discussion of the relevant provisions of the Companies Act and our Articles of Incorporation, see "Item 10. Additional Information—Memorandum and Articles of Incorporation."

(2) It may not be possible for investors to affect service of process within the United States upon ORIX or ORIX's directors or executive officers, or to enforce against ORIX or those persons judgments obtained in U.S. courts predicated upon the civil liability provisions of the federal securities laws of the United States

ORIX is a joint stock corporation formed in Japan. Most or all of ORIX's directors and executive officers are residents of countries other than the United States. Although some of ORIX's subsidiaries have substantial assets in the United States, substantially all of ORIX's assets and the assets of ORIX's directors and executive officers are located outside the United States. As a result, it may not be possible for investors to affect service of process within the United States upon ORIX or ORIX's directors and executive officers or to enforce against ORIX or those persons, in U.S. courts, judgments of U.S. courts predicated upon the civil liability provisions of U.S. securities laws. ORIX has been advised by its Japanese counsel that there is doubt, in original actions or in actions to enforce judgments of U.S. courts, as to the enforceability in Japan of civil liabilities based solely on U.S. securities laws. A Japanese court may refuse to allow an original action based on U.S. securities laws.

The United States and Japan do not currently have a treaty providing for reciprocal recognition and enforcement of judgments, other than arbitration awards, in civil or commercial matters. Therefore, if you obtain a civil judgment by a U.S. court, you will not necessarily be able to enforce such judgment directly in Japan.

(3) We may be a passive foreign investment company, which could result in adverse U.S. federal income tax consequences to U.S. investors

We believe that we may have been a passive foreign investment company (a "PFIC") under the U.S. Internal Revenue Code of 1986, as amended, for the year to which this report relates because of the composition of our assets and the nature of our income. In addition, we may be a PFIC in the foreseeable future. Assuming this is the case, U.S. investors in our Shares or ADSs will be subject to special rules of taxation in respect of certain dividends or gains on such Shares or ADSs, including the treatment of gains realized on the disposition of, and certain dividends received on, the Shares or ADSs as ordinary income earned pro rata over a U.S. investor's holding period for such Shares or ADSs, taxed at the maximum rate applicable during the years in which such income is treated as earned, with the resulting tax liability subject to interest charges for a deemed deferral benefit. In addition, in the case of any dividends that are not subject to the foregoing rule, the favorable rates of tax applicable to certain dividends received by certain non-corporate U.S. investors would not be available. See "Item 10. Additional Information—Taxation—United States Taxation." Investors are urged to consult their own tax advisors regarding all aspects of the income tax consequences of investing in our Shares or ADSs.

(4) If you hold fewer than 100 Shares, you will not have all the rights of shareholders with 100 or more Shares

One "unit" of our Shares is comprised of one hundred Shares. Each unit of the Shares has one vote. A holder who owns Shares other than in multiples of one hundred will own less than a whole unit (i.e., for the portion constituting of fewer than one hundred Shares.) The Companies Act imposes significant restrictions on the rights of holders of shares constituting less than a whole unit, which include restrictions on the right to vote. Under the unit share system, a holder of Shares constituting less than a unit has the right to require ORIX to purchase its Shares and the right to require ORIX to sell it additional Shares to create a whole unit. However, a holder of ADRs is not permitted to withdraw underlying Shares representing less than one unit, which is

equivalent to 20 ADSs, and, as a practical matter, is unable to require ORIX to purchase those underlying Shares. The unit share system, however, does not affect the transferability of ADSs, which may be transferred in lots of any number of whole ADSs.

(5) Foreign exchange fluctuations may affect the value of our securities and dividends

Market prices for our ADSs may decline if the value of the yen declines against the dollar. In addition, the dollar amount of cash dividends or other cash payments made to holders of ADSs will decline if the value of the yen declines against the dollar.

(6) A holder of ADRs has fewer rights than a shareholder and must act through the depositary to exercise those rights

The rights of shareholders under Japanese law to take various actions, including voting shares, receiving dividends and distributions, bringing derivative actions, examining a company's accounting books and records and exercising dissenters' rights, are available only to holders of record on a company's register of shareholders. The Shares represented by our ADSs are registered in the name of a nominee of the depositary, through its custodian agent. Only the depositary is able to exercise those rights in connection with the deposited Shares. The depositary will make efforts to vote the Shares represented by our ADSs as instructed by the holders of the ADRs representing such ADSs and will pay to those holders the dividends and distributions collected from us. However, a holder of ADRs will not be able to directly bring a derivative action, examine our accounting books and exercise dissenters' rights through the depositary unless the depositary specifically undertakes to exercise those rights and is indemnified to its satisfaction by the holder for doing so.

Item 4. Information on the Company

GENERAL

ORIX is a joint stock corporation (*kabushiki kaisha*) formed under Japanese law. Our principal place of business is at World Trade Center Building, 2-4-1 Hamamatsu-cho, Minato-ku, Tokyo 105-6135, Japan, and our phone number is: +81 3 3435 3000. Our general contact URL is https://ssl.orix-form.jp/ir/inquiry_e/ and our corporate website URL is: <http://www.orix.co.jp/grp/en>. The information on our website is not incorporated by reference into this annual report. ORIX USA Corporation ("ORIX USA") is ORIX's agent in the United States, and its principal place of business is at 1717 Main Street, Suite 1100, Dallas, Texas 75201, USA.

CORPORATE HISTORY

ORIX was established in April, 1964 in Osaka, Japan as Orient Leasing Co., Ltd. by three trading companies and five banks that included Nichimen Corporation, Nissho Corporation and Iwai Corporation (presently Sojitz Corporation), the Sanwa Bank (presently The Bank of Tokyo-Mitsubishi UFJ, Ltd.), Toyo Trust & Banking (presently Mitsubishi UFJ Trust and Banking Corporation), the Industrial Bank of Japan and Nippon Kangyo Bank (presently Mizuho Bank, Ltd.), and the Bank of Kobe (presently Sumitomo Mitsui Banking Corporation).

Our initial development occurred during the period of sustained economic growth in Japan during the 1960s and the early 1970s. We capitalized on the growing demand in this period by expanding our portfolio of leasing assets.

During this time, our marketing strategy shifted from a focus on using the established networks of the trading companies and other initial shareholders to one that concentrated on independent marketing as the number of our branches expanded. In April 1970, we listed our Shares on the second section of the Osaka
