

## RISK FACTORS

### Risks Related to Our Operations

***Our revenues are highly dependent on levels of passenger and cargo traffic volumes and air traffic, which depend in part on factors beyond our control.***

Our revenues are closely linked to passenger and cargo traffic volumes and the number of air traffic movements at our airports. These factors directly determine our revenues from aeronautical services and indirectly determine our revenues from non-aeronautical services. Our principal source of aeronautical service revenues is passenger charges. Passenger charges are payable for each passenger (other than diplomats, infants and transit and transfer passengers, if the transfer of the passenger occurs within 24 hours of the passenger's arrival at the airport) departing from the airport terminals we operate and are collected by the airlines and paid to us. In 2011, 2012 and 2013 passenger charges represented 51.8%, 57.1% and 58.8%, respectively, of our total revenues (in 2011, 2012 and 2013, passenger charges represented 65.5%, 64.5% and 64.2%, respectively, of the sum of our aeronautical and non-aeronautical revenues).

Passenger and cargo traffic volumes and air traffic movements depend in part on many factors beyond our control, including economic conditions in Mexico and the United States, the political situation in Mexico and elsewhere in the world, public health crises, the attractiveness of the destinations that our airports serve relative to those of other competing airports, fluctuations in petroleum prices, disruptions of global debt markets and changes in regulatory policies applicable to the aviation industry. Any decreases in air traffic to or from our airports as a result of factors such as these could adversely affect our business, results of operations, prospects and financial condition.

***A global economic and financial crisis may affect our business.***

The global economic and financial crisis that began in 2007 and continued through 2009, led to high volatility and lack of liquidity in the global credit and other financial markets. The downturn in the U.S. and global economies led to increased commercial and consumer delinquencies, lack of consumer confidence, decreased market valuations, increased market volatility, high financial risk premiums and a widespread reduction of business activity generally. These conditions also limited the availability of credit and increased financial costs for companies around the world, including companies in Mexico and the United States. Although economic conditions improved starting in 2010 and the availability of credit has increased while interest rates remained stable, another recession could significantly affect our ability to access credit to finance our future projects, therefore adversely affecting our business.

***Negative economic developments in Mexico could reduce domestic passenger traffic at our airports, which would adversely affect our business and results of operations.***

Although a substantial portion of our revenues is derived from foreign tourism, Mexican domestic passengers in recent years have represented approximately two-thirds of the passenger traffic volume at our airports. In addition, all of our assets are located, and all of our operations are conducted, in Mexico. Because our revenues are largely dependent on the level of passenger traffic at our airports, any decline in domestic traffic could have an adverse effect on our business, results of operations, prospects and financial conditions. Therefore, if inflation or interest rates increase significantly or the Mexican economy is otherwise adversely impacted, our business, financial condition and results of operations could be materially and adversely affected because, among other things, domestic demand for transportation services may decrease. For more information on the potential impact of negative economic developments in Mexico, see “- Risks Related to Mexico - Adverse economic conditions in Mexico may adversely affect our financial condition or results of operations” in this section.

***Our business is particularly sensitive to economic conditions and other developments in the United States.***

Our business is particularly sensitive to trends in the United States relating to leisure travel, consumer spending and international tourism. In 2011, 2012 and 2013, 88.5%, 88.0% and 89.7%, respectively, of the international terminal passengers served by our airports arrived and departed on flights originating in or departing to the United States.

Thus, our business is highly dependent on the condition of the U.S. economy, and events affecting the U.S. economy may adversely affect our business, results of operations and financial condition. In 2011, the U.S. gross domestic product ("GDP") increased at an annualized rate of 1.7%. In 2012 and 2013, the U.S. GDP grew 2.2% and 1.9%, respectively. Therefore, although the U.S. economy has grown every year since the economic crisis that lasted from the end of 2007 until the middle of 2009, if the U.S. economy falls back into a recession, it would likely have a material adverse effect on our results of operations due to decreased passenger traffic travel to and from the United States.

Other trends and developments in the United States may also adversely impact the frequency and pattern of our international passenger traffic. For example, any development that could make travel to and from the United States less attractive to our passengers, including legislative developments related to immigration policy in the United States, could negatively affect the level of passenger traffic in our airports, which may adversely affect our business, financial condition or results of operations.

***Levels of passenger and cargo traffic volumes and air traffic at our airports are highly sensitive to the impact on airlines of international petroleum prices and access to credit.***

Our revenues are closely linked to passenger and cargo traffic volumes and air traffic movements at our airports, which are determined by the operating levels of airlines at our airports. Airlines' costs are highly sensitive to the price of petroleum and their access to credit to finance their operations. Increased costs may increase ticket prices and reduce fleets, thereby decreasing flight frequencies and negatively impacting passenger and cargo traffic volumes.

International petroleum prices have experienced significant volatility in the recent past, reaching record highs in the third quarter of 2008. Although prices have remained below the highs of 2008, the price of fuel may be subject to further fluctuations resulting from a reduction or increase in output of petroleum, voluntary or otherwise, by oil-producing countries, other market forces, a general increase in international hostilities, or any future terrorist attacks. Increases in airlines' costs as a result of higher petroleum prices may lead to airline bankruptcies, higher ticket prices, cancellations of routes and decreases in frequencies of flights, and may decrease demand for air travel generally, which may reduce passenger and cargo traffic at our airports.

Most airlines also depend on reliable access to credit at interest rates they can afford to finance their fleet of aircraft and make other large investments. As evidenced by the recent global recession and financial crisis, high interest rates and disruptions in the global debt markets had an adverse effect on airlines' ability to operate their fleets, forcing many to raise ticket prices, cancel routes, decrease the frequencies of flights or forego scheduled investments. Such reductions in operations by airlines led to lower passenger and cargo traffic volumes at our airports, which has had an adverse impact on our results of operations.

See "-The loss of or suspension of operations by one or more of our key customers could result in a loss of a significant amount of our revenues" in this section for a more detailed description of which of our major airline customers have recently reduced or cancelled operations at our airports.

[Table of Contents](#)

***Our business is highly dependent upon revenues from four of our airports and could be adversely impacted by any condition affecting those airports.***

In 2013, approximately 82.4% of the sum of aeronautical and non-aeronautical revenues was generated from four of our 12 airports. The following table lists the percentage of the sum of aeronautical and non-aeronautical revenues generated at our airports in 2013:

Airport	For year ended
	December 31, 2013
Guadalajara International Airport	35.4%
Los Cabos International Airport	19.6%
Tijuana International Airport	14.3%
Puerto Vallarta International Airport	13.1%
Eight other airports	17.6%
Total	100.0%

As a result of the substantial contribution to our aeronautical and non-aeronautical revenues from these four airports, any event or condition affecting these airports could have a material adverse effect on our business, results of operations, prospects and financial condition.

***Competition from other tourist destinations could adversely affect our business.***

The principal factor affecting our results of operations and business is the number of passengers using our airports. The number of passengers using our airports (particularly our Los Cabos International Airport and our Puerto Vallarta International Airport) may vary as a result of factors beyond our control, including the level of tourism in Mexico. In addition, our passenger traffic volume may be adversely affected by the attractiveness, affordability and accessibility of competing tourist destinations in Mexico, such as Acapulco and Cancun, or elsewhere, such as Hawaii, Puerto Rico, Florida, Cuba, Jamaica, the Dominican Republic and other Caribbean islands and destinations in Central America. The attractiveness of the destinations we serve is also likely to be affected by perceptions of travelers as to the safety and political and social stability of Mexico, particularly as a result of the uncertainty and safety concerns resulting from the government's ongoing effort against drug cartels. There can be no assurance that tourism levels, and therefore the number of passengers using our airports, in the future will match or exceed current levels. A reduction in tourism to the destinations served by our airports could directly and indirectly affect our revenues from aeronautical and non-aeronautical services.

***International events, including acts of terrorism, wars and global epidemics, could have a negative impact on international air travel.***

International events such as the terrorist attacks on the United States on September 11, 2001, wars such as the one in Iraq and public health crises such as the Influenza A/H1N1 epidemic have negatively affected the frequency and pattern of air travel worldwide in recent years.

The terrorist attacks on the United States on September 11, 2001 had a severe adverse impact on the air travel industry, particularly on U.S. carriers and on carriers operating international service to and from the United States. Airline traffic in the United States fell precipitously after the attacks. Our terminal passenger volumes declined 1.4% in 2001 and an additional 5.3% in 2002 (in each case as compared to the prior year). Any future terrorist attacks, whether or not involving aircraft, will likely adversely affect our business, results of operations, prospects and financial condition. Moreover, we cannot predict what effect any future terrorist attacks or threatened attacks on the United States or any retaliatory measures taken by the United States in response to these events may have on the U.S. economy or leisure travel trends, which may negatively affect our results of operations.

## Table of Contents

In April 2009, Mexico, as well as several other countries, was affected by an outbreak of Influenza A/H1N1. As a result of the outbreak, a number of countries, including the United States, Great Britain and France, advised against nonessential travel to Mexico, although these advisories had been lifted by the end of May 2009. While we cannot completely isolate the impact on travel of the advisories and restrictions imposed by national and international governments from other potential factors such as the economy, our domestic passenger traffic and international passenger traffic declined by 33.3% and 43.7%, respectively, during May 2009 (in each case compared to May 2008). A new outbreak could once again disrupt our operations and significantly affect passenger and cargo traffic levels.

Because our revenues are largely dependent on the level of passenger traffic in our airports, any general increase of hostilities relating to reprisals against terrorist organizations, further armed conflict around the world, outbreaks of health epidemics or other events of general international concern (and any related economic impact of such events) could result in decreased passenger traffic and increased costs to the air travel industry and, as a result, could cause a material adverse effect on our business, results of operations, prospects and financial condition.

***Security enhancements and requirements may require additional investments or result in additional expenses.***

The air travel business is susceptible to, and has experienced, increased costs resulting from enhanced security and higher insurance. Following the events of September 11, 2001, we reinforced security at our airports, and our general liability insurance premiums increased substantially. Since August 1, 2003, we have carried a Ps. 500 million insurance policy covering damages to our property resulting from terrorist acts. We carry a U.S.\$150 million insurance policy covering personal and property damages to third parties resulting from terrorist acts. Because our insurance policies do not cover all losses and liabilities resulting from war or terrorism, we could incur significant costs if we were to be directly affected by events of this nature. Any such increase in our operating costs would have an adverse effect on our results of operations.

The users of airports, principally airlines, also have been subject to increased costs following the events of September 11, 2001. Airlines have been required to adopt additional security measures and may be required to comply with more rigorous security rules or guidelines in the future. Premiums for aviation insurance increased substantially in the years following 2001 and could rise further in the future. While governments in other countries have agreed to indemnify airlines for liabilities they might incur resulting from terrorist attacks, the Mexican government has not done so and has given no indication of any intention to do the same. In addition, fuel prices, supplies and interest rates for airlines' aircraft lease agreements, which constitute a significant cost for airlines using our airports, may be subject to increases resulting from any future terrorist attacks, a general increase in international hostilities or a reduction in output of fuel, voluntary or otherwise, by oil producing countries. Such increases in airlines' costs have resulted in higher airline ticket prices and decreased demand for air travel generally, thereby having an adverse effect on our revenues and results of operations. In addition, because a substantial majority of our international flights involve travel to the United States, we may be required to comply with security directives of the U.S. Federal Aviation Authority, in addition to the directives of Mexican aviation authorities.

If authorities require security enhancements or require us to adopt additional security measures, we may be required to undertake significant additional expenses and capital expenditures, and we cannot guarantee that those expenses and/or capital expenditures will be taken in to account in our Maximum Tariff and Master Development Programs negotiations. Therefore, these additional expenses could negatively affect our cash flows and affect our results of operations.

***The operation of new baggage screening equipment could increase our expenses and may expose us to greater liability.***

In 2005, the Mexican government issued a policy letter (*carta de política*) calling for all checked baggage on all commercial flights to undergo a new comprehensive screening process. The new screening process required the installation of dedicated screening equipment and the manual inspection of baggage if such equipment signals the potential presence of prohibited items. Because of uncertainty over the policy letter's implementation, the new screening process was initially delayed. Although the Mexican Airport Law expressly provides that airlines bear the responsibility for baggage screening, the fact that the policy letter is silent as to responsibility caused some of our airline customers to contend that the policy letter's intent is for airport concessionaires, such as us, to bear responsibility for the new screening process. In addition, certain questions have been raised regarding the constitutionality of the new screening process. Since the issuance of the policy letter, the Mexican Bureau of Civil Aviation has been expected to issue implementing regulations. On November 23, 2012, the Mexican Bureau of Civil Aviation (*Dirección General de Aeronáutica Civil*, or "DGAC") published a recommendation, titled a "*Circular Obligatoria*," on the Ministry of Communications and Transportation website that, instead of modifying the legal responsibilities set forth in the Mexican Airport Law, attempted to facilitate contracts between parties through certain recommendations regarding issues of responsibility that have been raised. These recommendations are not binding and would have no legal effect unless incorporated into a valid contract.

The checked baggage screening equipment has been operational in our 10 busiest airports since 2011; only the Aguascalientes and Los Mochis airports continue to perform manual inspection. As of December 31, 2013, we had signed agreements to operate the baggage screening equipment with all of our airline customers with a significant volume of traffic, except Viva Aerobus, Copa and AirCanada. As a result, as of the end of 2013, approximately 90% of the passengers travelling through our airports were using the baggage screening system, compared to approximately 30% at the end of 2012.

We are incurring ongoing expenses to maintain and operate this equipment. Currently, the operational costs of the screening system have been limited to the level necessary to provide the required services to airlines, and we expect to continue recovering those costs, which could increase if more airlines sign a contract to use our equipment. We also expect to incur ongoing expenses to maintain any equipment purchased, and we could be required to undertake significant additional capital expenditures for items such as a new screening technology or additional equipment if screening guidelines are expanded further and require that additional steps be taken to comply with the requirements. These additional expenses could restrict our liquidity and adversely affect our results of operations. In addition, if it is determined that we are responsible for all or a portion of the cost or that we are liable for certain issues arising from our operation of the screening systems, our exposure to liability could increase significantly. These operational costs will be reviewed during our negotiation of the Master Development Programs for the years 2015-2019, which will take place during 2014. For more information on screening equipment, see "Item 4, Regulatory Framework – Scope of Concessions".

***Our revenues and profitability may be adversely affected if we fail in our business strategy.***

Our ability to increase our revenues and profitability depends in part on our business strategy, which consists of setting prices as close as possible to our regulatory maximum rates for any given year, reducing operating costs, controlling our capital expenditure commitments under our Master Development Programs with the Mexican government, increasing passenger and cargo traffic at our airports and increasing revenues from commercial activities.

## Table of Contents

Our ability to increase our commercial revenues is significantly dependent, among other factors, upon increasing passenger traffic at our airports and on our ability to renegotiate rental agreements with our tenants to provide for contractual terms more favorable to us and for the ability for us to directly operate business lines. In addition, our ability to increase revenues from commercial activities depends on our ability to continue the remodeling, expansion and modernization of the commercial areas we operate within our airports and on the introduction of new business lines. Further, we are in the process of expanding the amount and types of business lines that we operate directly within our airports. Revenues from business lines operated directly by us represented 6.7% of total revenues during 2013, as compared with 5.7% of total revenues during 2012 (7.3% of the sum of aeronautical and non-aeronautical revenues generated in our airports in 2013, as compared to 6.4% in 2012).

We cannot provide assurance that we will be successful in implementing our strategy of increasing our passenger traffic or our revenues from commercial activities, including commercial activities that we operate directly. The passenger traffic volume in our airports depends on factors beyond our control, such as the attractiveness of the commercial, industrial and tourist centers that the airports serve. Additionally, our new commercial strategy of increasing revenues by operating lines of businesses in our airports directly could result in the loss of a significant amount of revenues, or not generate the level of profitability sufficient to increase our results of operations. Accordingly, there can be no assurance that the passenger traffic volume in our airports will increase or that our profitability will increase.

***If a change in relations with our labor force should occur, such a change could have an adverse impact on our results of operations.***

Although we currently believe we maintain good relations with our labor force, if any conflicts with our employees were to arise in the future, including with our unionized employees (which accounted for approximately 50% of our total employees as of December 31, 2013), resulting events such as strikes or other disruptions that could arise with respect to our workforce could have a negative impact on our results of operations.

***The loss of or suspension of operations by one or more of our key customers could result in a loss of a significant amount of our revenues.***

A majority of our revenues are driven by the operations of a few key customer airlines. Concesionaria Vuela Compañía de Aviación, S.A. de C.V., or Volaris; Grupo Aeroméxico, S.A.B. de C.V., or Grupo Aeroméxico, a holding company that owns Aeroméxico and Aeroméxico Connect; and ABC Aerolíneas, S.A. de C.V., or Interjet, accounted—excluding revenues from passenger charges—for 1.2%, 0.4% and 0.1%, respectively, of total revenues in our airports in 2013 (1.3%, 0.4% and 0.1%, respectively, of the sum of aeronautical and non-aeronautical revenues generated in our airports in 2013). However, these airlines transport a significant amount of our passenger traffic; during 2013, the passenger charges collected by these three airlines accounted for 20.4%, 10.9% and 5.6%, respectively, of total revenues in our airports (22.3%, 12.0% and 6.1%, respectively, of the sum of aeronautical and non-aeronautical revenues generated in our airports in 2013).

None of our contracts with our airline customers obligate them to continue providing service to our airports, and we can offer no assurance that, if any of our key customers reduce their use of our airports, competing airlines would add flights to their schedules to replace any flights no longer handled by our principal airline customers.

For example, on August 2, 2010, Mexicana de Aviación, S.A. de C.V. (“Mexicana”), one of Mexico’s two largest carriers and previously an airline which was among our three largest customers in terms of passenger traffic, filed for bankruptcy protection in Mexico and in the United States. On August

## [Table of Contents](#)

28, 2010, Mexicana, Mexicana Click (formerly known as Aerovías Caribe) and Mexicana Link (formerly known as Mexicana (Inter) (collectively “Grupo Mexicana”) ceased operations. Mexicana Click and Mexicana Link filed for bankruptcy protection on September 7, 2010. In 2010, Grupo Mexicana was still our third largest carrier and accounted for 8.9% of the sum of aeronautical and non-aeronautical revenues generated in our airports. It was not until 2012 that all seats previously flown by Grupo Mexicana were taken over by other airlines. We can offer no assurance that competing airlines would seek to increase their flight schedules if any of our key customers reduced their use of our airports. In addition, Mexican law prohibits an international airline from transporting passengers from one Mexican location to another, except if the passenger originated travel outside Mexico, thus limiting the number of airlines providing domestic service in Mexico. Accordingly, we expect to continue to generate a significant portion of our revenues from domestic travel from a limited number of airlines.

Additionally, on November 29, 2011, AMR Corporation (“AMR”), parent of American Airlines Inc. (“American”) and AMR Eagle Holding Company (“American Eagle”), filed voluntary petitions for Chapter 11 reorganization in a U.S. bankruptcy court. The Chapter 11 process permitted American and American Eagle to continue operating flights normally during the reorganization. To date, AMR Corporation, through its two subsidiaries American and American Eagle, operates at 7 of our 12 airports (Aguascalientes, Guanajuato, Guadalajara, Hermosillo, Morelia, Puerto Vallarta and Los Cabos). From January to December 2013, AMR Corporation, through its subsidiaries, transported 899,116 passengers at our airports, which represents 3.9% of our passenger traffic in 2013. During the Chapter 11 process, neither American nor American Eagle has suspended payments for the services provided by us. Although as of December 31, 2013, the current balance of payments owed to us by AMR Corporation was Ps. 9.4 million, the amount of the bond granted to us by AMR Corporation as a guarantee of such payments was Ps. 41.0 million as of December 31, 2013. On December 9, 2013, AMR Corporation emerged from Chapter 11 bankruptcy protection upon the conjunction of AMR Corporation’s “Plan of Reorganization” and merged with U.S. Airways. Upon closing of the merger, AMR Corporation was renewed American Airlines Group, Inc.

Furthermore, passenger charges, which accounted for 58.8% of our revenues in 2013 (64.2% taking into account only the sum of aeronautical and non-aeronautical revenues), are collected by airlines from passengers on our behalf and are later paid to us, depending on the airline, within no more than 60 days following the date of each flight. During 2013, the average collection term of passenger charges was 59 days. If any of our key airline customers were to become insolvent or seek bankruptcy protection, we would be an unsecured creditor with respect to any unpaid passenger charges, and we might not be able to recover the full amount of such charges.

During 2009, we renegotiated our passenger charges collection agreements with all of our airline customers. See “Item 4, *Business Overview – Our Sources of Revenues – Aeronautical Services – Passenger Charges*”. According to the new agreements that took effect on November 1, 2009, an airline may obtain a grace period of up to a maximum of 60 days for payment on a case by case basis (not all airlines received the same grace period). If an airline wants to obtain a grace period of any amount up to the 60-day limit, the airline is required to secure the grace period and the equivalent of 30 additional days with cash, bonds or other collateral equal to the charges the airline would incur during that period by taking into account the peak operational days for that specific airline during the previous 12-month period. Thus, in the event of insolvency or suspension of operations by an airline, we are able to collect passenger charges invoiced to that airline up to the value of the collateral. Although we would also have a 30-day buffer beyond the grace period, our cash flows from operations or our results of operations could be negatively affected if such collateral were not sufficient to cover the outstanding debt. Thus, in the event of any suspension of operations by an airline, such as in the case of Grupo Mexicana in 2010, or insolvency, we would not be assured of collecting 100% of the amounts invoiced to that airline for passenger charges, nor could we be assured that we would recover, in the short term, the traffic they would stop transporting, as a consequence of an airline’s ongoing bankruptcy process. Both scenarios could negatively affect our cash flows from operations or our results of operations.

Additionally, in previous years, some of our commercial clients have had difficulty making their payments to our airports. As a result, we have tried to renegotiate terms with many clients to keep them at our airports. Despite our efforts, some clients have decided to leave our commercial spaces and cancel their contracts. This could potentially have a negative effect on our revenues.

***Our business is dependent on international regulations that affect Mexican airlines.***

Airline regulations promulgated by international bodies or regulatory agencies in other countries could affect our operations and potentially affect our revenues or results of operations. For instance, on July 30, 2010, the United States Federal Aviation Administration ("FAA") announced that, following an assessment of Mexico's civil aviation authority, it had determined that Mexico was not in compliance with international safety standards set by the International Civil Aviation Organization ("ICAO"), and, as a result, downgraded Mexico's aviation safety rating from "Category 1" to "Category 2".

Under FAA regulations, because of this downgrade, Mexican airlines were not permitted to expand or change their current operations between the United States and Mexico except under certain limited circumstances; code-sharing arrangements between Mexican and U.S. airlines were suspended; and operations by Mexican airlines flying to the United States were subject to greater FAA oversight. These additional regulatory requirements resulted in reduced service between our airports and the United States by Mexican airlines, which resulted in a decrease in demand for travel between our airports and the United States. Approximately 7.6% of the passengers that traveled through our airports traveled on flights to or from the United States operated by Mexican airlines in 2013.

The FAA restored Mexico's Category 1 rating on December 1, 2010. The FAA, however, may downgrade Mexico's air safety rating in the future. We cannot predict what impact such a downgrade would have on our passenger traffic or results of operations, or on the public perception of the safety of Mexican airports.

***The main domestic airlines operating at our airports have in the past refused to pay certain increases in our specific prices for aeronautical services and could refuse to pay additional increases in the future.***

In the past, certain of the domestic airlines operating at our airports refused to pay certain increases in the specific prices we charge for aeronautical services.

Although these prior disputes were resolved by 2006, because only a few airlines contribute a substantial portion of our revenues, our results of operations could be adversely impacted if any of these (or any of our other) airlines should refuse to make payments in the future. Moreover, during periods of economic downturn, the airlines that operate at our airports may be more likely to oppose increases in our charges for aeronautical services in future years, which could adversely impact our results of operations. See "Item 4, Business Overview - Principal Customers - Principal Aeronautical Services Customers - Airline Customers".

***The airlines at our airports may refuse to continue collecting passenger charges on our behalf or we may decide to collect passenger charges ourselves, which would result in increased costs for us.***

We collect a passenger charge for each departing passenger on an aircraft (other than diplomats, infants and transfer and transit passengers, if the transfer of the passenger occurs within 24 hours of the passenger's arrival at the airport). Currently, we have entered into collection agreements with the airlines that operate at our airports to collect those passenger charges on our behalf. As a result, passenger charges are automatically included in the cost of passengers' tickets, and we issue invoices for those charges to each airline. See "Item 4, Business Overview - Our Sources of Revenues - Aeronautical Services - Passenger Charges".

---

## Table of Contents

We and the airlines with which we have these collection agreements have the right to cancel them with prior notice to the other party. If we or one of our airline customers were to cancel a collection agreement, we would have to implement a collection system of our own to collect passenger charges from passengers directly. The installation and operation of such a collection system would result in additional costs for us, which would negatively impact our results of operations.

***The operations of our airports may be disrupted due to the actions of third parties, which are beyond our control.***

As is the case with most airports, the operation of our airports is largely dependent on the services of third parties, such as air traffic control authorities, airlines and ground transportation providers. We also depend upon the Mexican government or entities of the government for provision of services, such as electricity, supply of fuel for aircraft, air traffic control and immigration and customs services for our international passengers. Additionally, the disruption or stoppage of taxi or bus services at one or more of our airports could also adversely affect our operations. We are not responsible for and cannot control the services provided by these parties. Any disruption in, or adverse consequence resulting from, their services, including a work stoppage or other similar event, may have a material adverse effect on the operation of our airports and on our results of operations.

In addition, we are dependent on third-party providers of certain complementary services such as catering, baggage handling, and operation of airbuses and passenger walkways. If these service providers were to halt operations at any of our airports, we would be required to seek a new service provider or provide services ourselves, either of which would likely result in increased capital expenditures or costs and have an adverse impact on our cash generation and results of operations.

***Actions by the former holders of land comprising certain of our airports may disrupt the operations of these airports.***

A portion of the lands comprising some of our airports were expropriated by the Mexican government pursuant to its power of eminent domain. Prior to their expropriation, some of these lands had been held by groups of individuals through a system of communal ownership of rural land known as an *ejido*. Certain of these former *ejidos*' participants have asserted indemnity claims against the Mexican government challenging the expropriation decrees. See "Item 8, *Financial Information - Legal Proceedings - Ejido Participants at Tijuana, Guadalajara and Puerto Vallarta Airports*".

Our concessions guarantee access to the land by the Ministry of Communications and Transportation and any interruption caused to our operations by any of the *ejidos* is the responsibility of the Mexican Government. Although the Mexican Government must provide restitution for any economic loss resulting from a disruption in access to our airports, there can be no assurance that the former *ejido* participants will not seek to disrupt the airport's operations if their legal claims against the Mexican Government are not resolved to their satisfaction. There also can be no assurance that the legal proceedings will be resolved in our favor, which may negatively impact our results of operations.

In addition to challenging the expropriation, certain of the former *ejido* participants are also currently occupying portions of the Tijuana International Airport property. While these persons are not currently interfering with the airport's operations, their presence could limit our ability to expand the airport into the areas they occupy. There can also be no assurance that the former *ejido* participants will not seek to disrupt the airport's operations if their legal claims against the Mexican government are not resolved to their satisfaction, which may negatively impact our results of operations.

***The actions of squatters on certain portions of the land on which our Guadalajara International Airport operates could disrupt operations and security of the airport.***

The Mexican government owns the land on which the Guadalajara International Airport operates and has granted us the right to use that land for the purpose of operating the airport pursuant to our concession. Currently, there are squatters residing on or claiming rights to a portion of the property, at least one of whom has attempted to subdivide and sell off certain portions of the property. As owner of the property, the Mexican government must initiate any actions directed at removing these persons from the property. We are reviewing the actions these persons have taken and are cooperating with the Mexican government to ensure that the actions of these squatters do not adversely affect the operations of the Guadalajara International Airport. However, if the Mexican government or we are unable to successfully remove these persons from the property, their presence could have an adverse impact on our operations and security at the airport and could restrict our ability to expand our operations at the airport.

***We may be liable for property tax claims asserted against us by certain municipalities.***

We remain subject to ongoing property tax claims that have been asserted against us by the municipal authorities of Mexicali, Tijuana, Guadalajara, Hermosillo and Manzanillo for the payment of property taxes with respect to the property on which we operate our airports in those cities, and similar claims have been and may be asserted by other municipal authorities where we operate our airports. We believe that under the law, the Mexican government, as the owner of the property upon which we operate our airports, would currently be responsible for paying these taxes directly if a court were to determine that these taxes must be paid. See "Item 8, Financial Information - Legal Proceedings - Property tax claims by certain municipalities" for a full discussion of these property tax proceedings.

In addition, on May 28, 2010, the State Legislature of Jalisco sent to the Mexican Congress a legislative initiative in which they requested that Congress consider changing the current Mexican Airport Law so that privately held airports operating on federal land would be subject to municipal taxes. As of the date of this report, this initiative remains under review by Congress.

If the Mexican government changes the current laws or if we do not prevail in the aforementioned proceedings, these tax liabilities could have a material adverse effect on our financial condition and results of operations.

***Our business could be adversely affected by the penalty imposed by the Mexican tax authority on some of our airports.***

The Mexican tax authority (*Servicio de Administración Tributaria*, or "SAT"), in connection with its review of the year 2005, sent us official notices in 2008 and 2009 stating that, under its criteria, the fiscal amortization rate used for each of the La Paz, Morelia and Los Mochis airports' concession values was incorrect. We initiated legal proceedings in a federal tax court to challenge SAT's findings, based on our contention that SAT did not take into consideration all the relevant legal matters concerning our position on amortization. See "Item 8, Financial Information - Legal Proceedings - Federal tax proceedings against La Paz, Morelia and Los Mochis airports".

During 2013, several of these legal proceedings determined that our airports had applied an incorrect rate. Consequently, those airports were required to modify their tax calculations as of 2005. These modified tax calculations, however, did not have a significant effect on our results of operations. However, the legal proceeding regarding the La Paz airport is still pending, and any modification of tax calculations that may be required as a result could negatively affect our net income.

***Our business could be adversely affected by other claims by certain municipalities***

Certain of our airports are subject to claims by the municipality in which they operate regarding our failure to obtain certain municipal licenses. Although we do not believe that we are subject to the license requirements at issue, if the municipalities require additional licenses or make changes to the current laws and we are unable to obtain the necessary licenses or if we do not prevail in proceedings challenging these requirements, our failure to obtain these licenses could have a material adverse effect on the operations of certain of our airports and consequently on our financial condition and results of operations.

**Risks Related to the Regulation of Our Business**

***We provide a public service regulated by the Mexican government, and our flexibility in managing our aeronautical activities is limited by the regulatory environment in which we operate.***

Our aeronautical fees charged to airlines and passengers are regulated, like those of most airports in other countries. In 2011, 2012 and 2013, approximately 62.3%, 68.1%, and 69.2%, respectively, of our total revenues were earned from aeronautical services, which are subject to price regulation under our maximum rates (in 2011, 2012 and 2013, 78.9%, 76.9%, and 75.5%, respectively, of the sum of aeronautical and non-aeronautical revenues were earned from aeronautical services). These regulations may limit our flexibility in operating our aeronautical activities, which could have a material adverse effect on our business, results of operations, prospects and financial condition. In addition, several of the regulations applicable to our operations that affect our profitability are authorized (as in the case of our Master Development Programs) or established (as in the case of our maximum rates) by the Ministry of Communications and Transportation for five-year terms. Except under limited circumstances, we generally do not have the ability to unilaterally change our obligations (such as the investment obligations under our Master Development Programs or the obligation under our concessions to provide a public service) or increase our maximum rates applicable under those regulations should the passenger traffic or other assumptions on which the regulations were based change during the applicable term. In addition, there can be no assurance that this price regulation system will not be amended in a manner that would cause additional sources of our revenues to be regulated.

***We cannot predict how the regulations governing our business will be applied.***

Many of the laws, regulations and instruments that regulate our business were adopted or became effective in 1999, and there is limited precedent that would allow us to predict the impact of these legal requirements on our future operations. In addition, although Mexican law establishes ranges of sanctions that might be imposed should we fail to comply with the terms of one of our concessions, the Mexican Airport Law and its regulations or other applicable laws, we cannot predict the sanctions that are likely to be assessed for a given violation within these ranges. We cannot provide assurance that we will not encounter difficulties in complying with these laws, regulations and instruments. Although our maximum rates through 2014 have been set, we cannot predict what our Master Development Programs for the next five-year period from 2015 to 2019 will establish. We also cannot provide assurance that other regulatory agencies or the Mexican legislature will not impose regulations adverse to our operations in the future or that the laws and regulations governing our business, including the Master Development Programs, the maximum rate-setting process and the Mexican Airport Law, will not change in the future or be applied or interpreted in a way that could have a material adverse effect on our results of operations. For instance, on December 14, 2011, a bill was introduced in Mexico's Congress to amend the Mexican Airport Law. The bill proposes that the Ministry of Communications and Transportation gain additional authority to plan

and apply the standards, policies and programs for the Mexican airport system, to oversee the correct operation of civil aviation in Mexico and to establish rules for airport service providers and the general basis for flight schedules, so as to guarantee the competitiveness of Mexico's airports. On December 19, 2012, the bill was approved and sent to the Mexican Senate for review. As of the date of this report, the Senate has not voted on the bill. We cannot predict whether this amendment will be adopted or, if adopted, the impact it would have on us.

***The regulations pursuant to which the maximum rates applicable to our aeronautical revenues are established do not guarantee that we or any of our airports will be profitable.***

The regulations applicable to our aeronautical activities establish an annual maximum rate for each airport, which is the maximum annual amount of revenues per workload unit that we may earn at that airport from services subject to price regulation. The maximum rates for our airports have been determined for each year through 2014. For a discussion of the framework for establishing our maximum rates and the application of these rates, see "Item 4, Information on the Company - Regulatory Framework - Aeronautical Services Regulation". Under the terms of our concessions, there is no guarantee that our consolidated results of operations or the results of operations of any airport will be profitable.

Our concessions provide that an airport's maximum rates will be adjusted periodically for inflation determined by reference to the Mexican Producer Price Index (*Índice Nacional de Precios al Productor*), excluding petroleum. Although we are entitled to request additional adjustments to an airport's maximum rates under certain circumstances, including the amendment of certain provisions of the Mexican laws and regulations that structure and influence our business, our concessions provide that such a request will be approved only if the Ministry of Communications and Transportation determines that certain events specified in our concessions have occurred. The circumstances under which we are entitled to an adjustment are described under "Item 4, Information on the Company - Regulatory Framework - Special Adjustments to Maximum Rates". Therefore, there can be no assurance that any such request would be made or granted.

***Our results of operations may be adversely affected by required efficiency adjustments to our maximum rates.***

In addition, our maximum rates are subject to annual efficiency adjustments, which have the effect of reducing the maximum rates for each year to reflect projected efficiency improvements. For the five-year term ending 2014, an annual efficiency adjustment factor of 70 basis points was established by the Ministry of Communications and Transportation. Future annual efficiency adjustments will be determined by the Ministry of Communications and Transportation in connection with the setting of each airport's maximum rates every five years. For a description of these efficiency adjustments, see "Item 4, Information on the Company - Regulatory Framework - Methodology for Determining Future Maximum Rates". We cannot provide assurance that we will achieve efficiency improvements sufficient to allow us to maintain or increase our operating income as a result of the progressive decrease in each airport's maximum rate.

***If we exceed the maximum rate at any airport at the end of any year, we could be subject to sanctions.***

Historically, we have set the prices we charge for aeronautical services at each airport to come as close as possible to the authorized maximum rate for that airport in any given year. We expect to continue to pursue this pricing strategy in the future. For example, in 2011, 2012 and 2013 our revenues subject to maximum rate regulation represented 99.9%, 100.0%, and 100.0%, respectively, of the amount we were entitled to earn under the maximum rates for all of our airports. However, there can be no assurance that we will be able to establish prices in the future that allow us to collect virtually all of the revenues we are entitled to earn from services subject to price regulation.

---

## [Table of Contents](#)

The specific prices we charge for aeronautical services are determined based on various factors, including projections of passenger traffic volumes, the Mexican Producer Price Index excluding petroleum, and the value of the peso relative to the U.S. dollar. These variables are outside of our control. Our projections could differ from the applicable actual data, and if these differences occur at the end of any year, they could cause us to exceed the maximum rate at any one or more of our airports during that year.

If we exceed the maximum rate at any airport at the end of any year, the Ministry of Communications and Transportation may assess a fine and may reduce the maximum rate at that airport in the subsequent year. The imposition of sanctions for violations of certain terms of a concession, including for exceeding an airport's maximum rate, can result in termination of the concession if the relevant term has been violated and sanctions have been imposed at least three times for the same cause. In the event that any one of our airport concessions is terminated, our other airport concessions may also be terminated.

In prior years, in order to ensure our compliance with the maximum rate at a particular airport when the possibility of exceeding that maximum rate has arisen, we have taken actions in the latter part of the year, such as reducing our specific prices and offering discounts. We can offer no assurance that, should external factors cause us to risk exceeding our maximum rates close to or at the end of any given year, we will have sufficient time to take the actions described above in order to avoid exceeding our maximum rates prior to year-end.

***If we fail to fulfill the requirements of our Master Development Programs during a given five-year period, we could be subject to sanctions from the Mexican government.***

Historically, our capital expenditure commitments under our Master Development Programs are determined by reference to the Mexican Producer Price Index, construction sector, materials, equipment rental and fees segment (*Índice Nacional de Precios al Productor, sector construcción, materiales, alquiler de maquinaria y remuneraciones*). Using the index we aim to be as close as possible to the five-year period capital expenditure commitments at any time. We expect to continue this capital expenditure control strategy in the future. Using this strategy, our capital expenditure during 2011, 2012 and 2013 was 100.4%, 101.1%, and 102.8%, respectively, of the commitment for all of our airports during that period. However, there can be no assurance that our capital expenditure control strategy will be sufficiently accurate and that we will not fall below our capital expenditure commitments. If as a consequence of the annual maximum tariff fulfillment review the Ministry of Communications and Transportation determines that we are not in compliance with the committed investments, the Ministry of Communications and Transportation may assess a fine and may reduce the maximum rate of that airport in the subsequent year. Non-compliance with committed investments could also result in the termination of the concession if the relevant term has been violated and sanctions have been imposed at least three times for the same cause. In the event that any one of our concessions is terminated, our other concessions may also be terminated.

Although in prior years, in order to ensure compliance with our Master Development Programs, we have taken actions in the latter part of the year, such as increasing the amount or pace of certain construction projects, we can give no assurance that, should external factors cause us to risk failing to meet our investment levels, we will have sufficient time to take actions to comply with our Master Development Programs.

***The Mexican government may terminate or reacquire our concessions under various circumstances, some of which are beyond our control.***

Our concessions are our principal assets, and we would be unable to continue operations without them. A concession may be revoked by the Mexican government for certain prescribed reasons, including failure to comply with our Master Development Programs, a temporary or permanent halt in our operations, actions affecting the operations of other concession holders in Mexico, failure to pay damages resulting from our operations, exceeding our maximum rates or failure to comply with any other material term of our concessions. Violations of certain terms of a concession (including violations for exceeding the applicable maximum rate) can result in revocation of a concession only if sanctions have been imposed for violations of the relevant term at least three times. Violations of other terms of a concession can result in the immediate termination of the concession. Our concessions may also be terminated upon our bankruptcy or insolvency.

We would face similar sanctions for violations of the Mexican Airport Law or the regulations thereunder. Under applicable Mexican law and the terms of our concessions, our concessions may also be made subject to additional conditions, including under our renewed Master Development Programs, which we may be unable to meet. Failure to meet these conditions may also result in fines, other sanctions and the termination of the concessions.

The Mexican government may also revoke one or more of our concessions at any time through reversion, if, in accordance with applicable Mexican law, it determines that it is in the public interest to do so. The Mexican government may also assume the operation of any airport in the event of war, public disturbance or a threat to national security. In addition, in the case of a *force majeure* event, the Mexican government may require us to implement certain changes in our operations. In the event of a reversion of the public domain assets that are the subject of our concessions, the Mexican government under Mexican law is required to compensate us for the value of the concessions or added costs based on the results of an audit performed by appraisers. In the case of a mandated change in our operations, the Mexican government is required to compensate us for the cost of that change. Similarly, in the event of an assumption of our operations, other than in the event of war, the government is required to compensate us and any other affected parties for any resulting damages. There can be no assurance that we would receive compensation equivalent to the value of our investment in, or any additional damages related to, our concessions and related assets in the event of such action.

In the event that any one of our airports' concessions is terminated, whether through revocation or otherwise, our other concessions may also be terminated. Thus, the loss of any concession would have a material adverse effect on our business and results of operations.

***The Mexican government could grant new concessions that compete with our airports.***

The Mexican government could grant additional concessions to operate existing government-managed airports, authorize the construction of new airports or allow existing privately held domestic airports to change into international airports and permit them to receive regular domestic and international flights, all of which could lead to increased competition for our airports.

One factor that may significantly increase competition from other airports is the expansion of the permits of existing private airports that are currently not permitted to operate regular commercial routes. Under Mexican law, any privately held airport that has operated with a permit to give public service for at least five years automatically acquires the right to also operate regularly scheduled commercial flights and to receive a concession to operate as a public service airport. In addition, through an amendment proposed by the Ministry of Communications and Transportation and confirmed by the Presidency, an airport operating with a permit to provide public service could become an international airport. For example, the

## [Table of Contents](#)

owner of a small private airport near Cabo San Lucas received a permit to offer public service in March 2008 from the Ministry of Communications and Transportation. On November 4, 2009, in response to a petition submitted to the Ministry of Communications and Transportation, this airport was authorized to operate regular commercial routes for domestic and international flights. Accordingly, this airport could eventually begin operating commercial flights, domestic or international, and compete with our Los Cabos International Airport. Until now, we have not experienced any material adverse effect on our business or results of operations from this airport, but it is possible that we may in the future.

Any competition from other such airports could have a material adverse effect on our business and results of operations. Under certain circumstances, the grant of a concession for a new or existing airport must be made pursuant to a public bidding process. In the event that a competing concession is offered in a public bidding process, we cannot provide assurance that we would participate in such process, or that we would be successful if we were to participate. Please see “Item 4, Information on the Company – Regulatory Framework – Penalties and Termination and Revocation of Concessions and Concession Assets – Grants of New Concessions”.

***The Ministry of Communications and Transportation could require us to monitor certain aircraft movements at our airports that we do not currently control, which could result in increased costs.***

The Mexican Air Traffic Control Authority (*Servicios a la Navegación en el Espacio Aéreo Mexicano*) currently requires us to manage and control aircraft movements in and out of our arrival and departure gates and remote boarding locations directly at our Guadalajara and Puerto Vallarta International Airports. At our other airports, these aircraft movements are monitored directly by the Mexican Air Traffic Control Authority. Should the Mexican Air Traffic Control Authority require us to control these aircraft movements directly at any or all of our other ten airports in the future, our results of operations could be negatively impacted by increased operating insurance and liability costs resulting from taking on these obligations.

### **Risks Related to Our Controlling Shareholder**

***AMP controls our management, and AMP’s interests may differ from those of other shareholders. In the past, disputes among AMP’s shareholders have affected us.***

AMP holds Series BB shares currently representing 15% of our outstanding capital stock. The Series BB shares have certain special rights that allow AMP to exercise significant control over our management. Through its right to appoint and remove members of our senior management, AMP has the ability to direct the actions of our management in areas such as business strategy, operations, financing, acquisitions and dispositions of assets or business.

Pursuant to our bylaws, AMP (as holder of our Series BB shares) has the right to appoint and remove our top-level executive officers, (upon consultation with our Nominations and Compensation Committee), to elect four members of our board of directors and their alternates and to designate three of the members of our Operating Committee and 20% of the members of each other board committee (or one member of any committee consisting of fewer than five members), except for the Audit Committee whose members are selected according to Mexican and U.S. independence standards. AMP (as holder of our Series BB shares) also has the right pursuant to our bylaws to veto certain actions requiring the approval of our shareholders (including the approval of our financial statements, increases or decreases of our capital stock, the payment of dividends, the amendment of our bylaws and any decision that has the objective to modify or annul its right to appoint our top-level executive officers). These rights are not conditioned on whether or not the technical assistance agreement and the participation agreement remain in force. Pursuant to our bylaws, if at any time AMP (as the holder of our Series BB shares) were to hold less than 7.65% of our capital stock in the form of Series BB shares, it would lose its veto rights (but not

other special rights). If at any time after August 25, 2014, AMP were to hold less than 7.65% of our capital stock in the form of Series BB shares, such shares would be mandatorily converted into Series B shares, which would cause AMP to lose all of its special rights. Shareholders of AMP have allocated among themselves certain veto rights relating to the exercise by AMP of its veto and other rights, which increases the risk of impasse at the shareholders' meeting of AMP and ultimately at our shareholders' meetings. Differences in points of view among AMP's shareholders with respect to our management could affect our results of operations. The interests of AMP may differ from those of our other shareholders, and we can offer no assurance that AMP and the officers appointed by AMP will exercise their rights in ways that favor the interests of our other shareholders.

In 2010 and 2011, disputes among AMP's shareholders affected our shareholders' meetings and trading of our shares on the Mexican Stock Exchange and the NYSE, as well as involving us in litigation. Notwithstanding those disputes, on December 1, 2011, we were advised by AMP's shareholders that they had entered into an agreement to end their dispute and to terminate their legal proceedings. As a result, during 2012, all proceedings among AMP's shareholders including proceedings brought against us were terminated. Additionally, we were informed that AMP's shareholders agreed to a comprehensive mechanism for decision-making (primarily by consensus, but with specific mechanisms aimed at avoiding deadlocks that could affect our operations), and AMP's shareholders will continue developing our business. They also affirmed their intent to defend the rights granted to them by the Mexican Government. The agreement further confirms the original ownership percentage in AMP of each of its three shareholders.

Stemming from the dispute among AMP's shareholders, on April 25, 2011, we received a formal notice from the *Comisión Nacional Bancaria y de Valores* (National Banking and Securities Commission, or the "CNBV") by which it initiated an administrative proceeding against us for alleged violations of Mexican disclosure statutes primarily in connection with the disputes among AMP's shareholders during 2010. The formal notice was the first stage in an administrative proceeding by the CNBV to impose economic sanctions on us. On June 3, 2011, we exercised our right to appeal the CNBV's determination and presented evidence to respond to the notification. On April 24, 2013, we were notified by the CNBV about the imposition of administrative penalties. We challenged these penalties via an administrative proceeding filed on June 27, 2013, before the Fiscal Federal and Administrative Justice Court. This lawsuit has not yet been concluded. See "Item 8, Financial Information - Legal Proceedings - Infractions of the Mexican Securities Law alleged by the CNBV".

If any further disputes among AMP's shareholders were to occur in the future, it is not possible to predict if they would result in deadlock at our shareholders' meetings or distract our management, or what effects such events might have on the price of our stock, its liquidity or our market value and the effects that these conflicts could have on our business or results of operations.

In addition, AMP's veto, appointment and other rights could adversely impact our operations and constitute an obstacle for us to bring in a new strategic shareholder and/or operator.

***If AMP should decide to sell all or a portion of its interest in us, our operations could be adversely affected.***

AMP currently exercises a substantial influence over our management, as described above. Our bylaws and certain of the agreements executed in connection with the privatization process prohibited AMP from transferring any of its Series BB shares before August 25, 2004. Since that date, AMP has been permitted to transfer up to 49% of its Series BB shares without restriction. After August 25, 2009, AMP may additionally sell in any year up to 20% of its remaining 51% interest in our Series BB shares. Presently, therefore, AMP is able to sell nearly all of the shares that it owns. Our bylaws provide that, subject to certain exceptions, Series BB shares must be converted into Series B shares prior to transfer. Should AMP divest its interest in us or cease to hold Series BB shares, our management could change and our operations could be adversely and significantly affected as a result.

***Our operations could be adversely affected if the technical assistance agreement is not renewed with AMP.***

As described above, AMP exercises a substantial influence over our management through the technical assistance agreement, through which AMP provides our airports with expertise in operating in the aeronautical sector and strategic planning guidance to increase aeronautical and non-aeronautical revenues, in addition to knowledge of the Mexican government and business sectors and assistance with the negotiation of our Master Development Programs. Therefore, if either we or AMP decides not to renew the technical assistance agreement, it would require time and potentially higher costs for us to replace AMP's strategic expertise through contracts with new external advisors; apart from the possible higher costs, the need to replace AMP could have an impact on our business strategy and ongoing projects, such as the successful negotiation of tariffs, investments and other elements of our Master Development Programs for the next 5 years. As a result, our results of operations could be negatively affected. We were recently involved in a lawsuit regarding the renewal of the technical assistance agreement. For more detailed information, see "Item 8, Financial Information - Legal Proceedings - Grupo México, S.A.B. de C.V. convokes Extraordinary Shareholders' Meeting via irregular channels" and "Item 4, Information on the Company - History and Development of the Company - Investment by AMP".

***Official inquiries relating to certain requirements of the privatization guidelines and the participation agreement relating to our privatization could have a material and adverse effect on our operations or the value of our securities.***

In 1999, as part of the first stage in the process of opening Mexico's airports to private investment, the Mexican government sold a 15% equity interest in us to AMP pursuant to a public bidding process.

Pursuant to the guidelines published by the Mexican government during the first phase of our privatization and the participation agreement setting forth the rights and obligations of each of the parties involved in our privatization, AMP assumed certain rights and obligations.

In 2004 and 2005, various reports in the Mexican press alleged that AMP did not comply with certain of its obligations under the privatization guidelines and the participation agreement, specifically the requirements related to the nationality of AMP's Mexican partner. In June 2005, the Permanent Commission of the Mexican Federal Congress (*Comisión Permanente del Congreso Federal*) requested that the Ministry of Communications and Transportation and other agencies of the federal government investigate these allegations and report on our share ownership structure and certain related matters.

In January 2006, the previous Mexican partner sold its 25.5% interest in AMP to Controladora Mexicana de Aeropuertos, S.A. de C.V., or Controladora Mexicana, a Mexican company 50% owned by Pal Aeropuertos, S.A. de C.V., and 50% owned by Promotora Aeronáutica del Pacífico, S.A. de C.V. The Ministry of Communications and Transportation approved the sale to Controladora Mexicana, including its role as AMP's Mexican partner pursuant to the privatization guidelines and the participation agreement relating to our privatization.

Although we believe AMP satisfies all their requirements under the privatization guidelines and the participation agreement, there can be no assurance that allegations or official inquiries relating to AMP's compliance with its obligations under those requirements will not take place. In the event of future inquiries or an official finding that AMP is or was not in compliance with the requirements of the privatization guidelines or the participation agreement, AMP could be subject to fines and the technical

assistance agreement between us and AMP could be terminated, which could have a material effect on our operations. In addition, there can be no assurance that any such developments would not result in a material decrease in the market value of our shares or ADSs or their liquidity.

***Certain actions by Grupo México, S.A.B. de C.V. may affect our management, financial condition or results of operations.***

On June 13, 2011, Grupo México, S.A.B. de C.V. (“Grupo México”) announced that its board of directors had approved the acquisition, directly or indirectly, of at least 30%, and up to 100%, of our shares outstanding at that time, excluding treasury shares, through a public tender offer. At that time, Grupo México had disclosed that it owned 20% of our total outstanding capital stock, all in the form of Series B shares. On March 29, 2012, Grupo México informed its shareholders that it had withdrawn its request for the authorization for a public tender offer from the Mexican National Banking and Securities Commission (*Comisión Nacional Bancaria y de Valores*).

In its most recent filing on Form 13D with the SEC on April 1, 2014, Grupo México disclosed that it owned 25.4% of our total outstanding capital stock.

Articles X and XII of our bylaws, among others, limit the ability of Series B shareholders, directly or with related parties, other than AMP, to hold more than 10% of our outstanding capital stock, and any shares held in excess of that amount must be sold in a public offering. In accordance with our bylaws, until the public offering of such shares takes place, such excess shares have no voting power and cannot be represented in any Shareholders’ Meeting.

Grupo México commenced two legal proceedings, among others, seeking (i) to modify our bylaws to eliminate the foregoing limitations and (ii) to terminate AMP’s special rights that stem from AMP’s ownership of our Series BB shares. The proceeding regarding AMP’s special rights is currently pending. If successful, these proceedings could affect AMP’s special rights (for additional information, see “— AMP controls our management, and AMP’s interests may differ from those of other shareholders” in this section). The proceeding regarding the modification of our bylaws is also pending. Initially, Grupo México obtained a favorable decision from a civil court in Mexico City. We appealed this decision; however, on February 25, 2013 we were notified that the decision was affirmed on appeal by the appellate court. We filed a direct *amparo* appeal on March 19, 2013, which will be resolved by a federal court. On April 10, 2013, we were informed that the court ordered the suspension of the civil courts’ decisions, pending the resolution of our appeal. On February 19, 2014, the Mexican Supreme Court agreed to review the legal proceeding regarding ownership limits contained in the Company’s by-laws.

Although Grupo México prevailed in the lower courts in the proceeding regarding our bylaws, these decisions have been suspended while the Supreme Court proceeding continues to be pending. Consequently, until a final decision is issued, our by-laws remain valid and binding upon our shareholders, including the obligation to dispose of shares held by Grupo México above the 10% threshold specified in our by-laws. Nonetheless, we cannot predict the content and scope of any judicial decision, and a decision by the Supreme Court that is adverse to our bylaws could materially and adversely affect AMP’s special rights and our future management, policies, strategies and results of operations. See “Item 8, Financial Information – Legal Proceedings – Litigation related to Grupo México, S.A.B. de C.V. and suits seeking to void certain of our bylaws”.

On November 16, 2013, an Extraordinary Shareholders Meeting was convoked by means of a judicial order issued on November 12, 2013, by the 38th Judge for Civil Matters in the Federal District, in response to a petition submitted by Grupo México. This Extraordinary Shareholders’ Meeting was to take place on December 3, 2013. The stated objective of the meeting was the possible approval of the non-renewal of the technical assistance agreement with AMP. We filed an *amparo* proceeding before the

---

## [Table of Contents](#)

federal 6th Civil District Court for the First Circuit in order to halt the carrying out of the shareholders' meeting, and a provisional suspension of the shareholders' meeting was granted on November 27, 2013. In addition, we filed for an injunction against the meeting before the 10th Judge for Commercial Matters for the city of Guadalajara, Jalisco, from which we also received a favorable decision on November 29, 2013. Grupo México appealed this latter injunction, and they were successful in getting this injunction lifted on December 2, 2013. However, Grupo México did not appeal the November 27, 2013 injunction. Nonetheless, the extraordinary Shareholders' Meeting did take place, in contravention of the court orders issued in respect of the *amparo* proceedings. On February 21, 2014, a Mexican federal final court of appeals declared the shareholders' meeting that took place on December 3, 2013 fully null and void; as a result, all resolutions approved at this meeting were similarly declared null and void. This resolution is definitive and not appealable. See "Item 8, *Financial Information - Legal Proceedings - Grupo México, S.A.B. de C.V. convokes Extraordinary Shareholders' Meeting via irregular channels*".

It is not possible to predict the extent to which these disputes with Grupo México will distract our management, the effects that future developments in this dispute might have on the price of our stock, its liquidity or our market value or the effects that these conflicts could have on our business or results of operations.

***We filed a suit against all Mexican stock brokers requiring them to adhere to our bylaws and to enjoin them from acquiring our capital stock for Grupo México and its subsidiaries. Actions by the Mexican stock brokers in response to this suit may affect us.***

In accordance with a decision of a Mexican court that instructs us and our directors and officers to take all necessary legal measures to maintain and protect our bylaws, on February 15, 2012 we initiated a lawsuit against all Mexican stock market brokers seeking that the stock market brokers strictly adhere to our bylaws and to restrict the sale of our shares to Grupo México and its subsidiaries if, in violation of our bylaws, they hold, individually or in the aggregate, more than 10% of our total outstanding capital stock.

On February 29, 2012, we were informed that a court issued preliminary injunctions that constrained Mexican stock brokers to, among other things, refrain from trading our shares for an individual, group or group of related entities, that could result in any way in the acquisition of an ownership position that exceeds the 10% maximum allowed by Article X of our bylaws. On December 14, 2012, the State of Jalisco's Fifth Mercantile Court issued a new ruling that lifted the injunctions. We appealed that order through an indirect *amparo* on January 3, 2013. On October 30, 2013, a final appellate court ratified the injunctions, overturning the order issued in December 2012. See "Item 8, *Financial Information - Legal Proceedings - We filed legal action against all the Mexican stock market brokers, seeking adherence to our bylaws*".

We cannot predict the consequences from this proceeding or the future actions of the Mexican stock brokers, including any limitations on our access to financing. It is also not possible to predict what effects future developments in this dispute might have on the price of our stock, its liquidity or our market value and the effects that this conflict could have on our business or results of operations.

### **Risks Related to Mexico**

***Adverse economic conditions in Mexico may adversely affect our financial condition or results of operations.***

All of our operations are conducted in Mexico and are dependent upon the performance of the Mexican economy. As a result, our business, financial condition or results of operations may be affected by the general condition of the Mexican economy, over which we have no control. In the past, Mexico has experienced economic crises, caused by internal and external factors, characterized by exchange rate

---

## [Table of Contents](#)

instability (including large devaluations), high inflation, high domestic interest rates, economic contraction, a reduction of international capital flows, a reduction of liquidity in the banking sector and high unemployment rates. We cannot assure that such conditions will not return or that such conditions will not have a material adverse effect on our business, financial condition or results of operations.

Mexico began to enter a recession in the fourth quarter of 2008, during which GDP fell by approximately 1.6% and inflation increased by 2.5%. According to the Mexican National Institute for Statistics and Geography (INEGI), GDP fell by an additional 6.5% and inflation increased by an additional 3.6% in 2009. The Mexican economy has since rebounded, and gross domestic product increased 3.9% in 2011, 3.9% in 2012 and 1.1% in 2013, in each case compared with the previous year.

While interest rates in Mexico have remained at historical lows, Mexico has had, and in the future may have, high real and nominal interest rates. The annualized interest rates for Mexican Treasury Bills (*Cetes*), issued for 28-day period averaged approximately 4.3%, 4.2%, and 3.7% for 2011, 2012 and 2013, respectively. As of April 10, 2014, the Interbank Equilibrium Interest Rate (*Tasa de Interés Interbancaria de Equilibrio*, or "TIIE") issued for the 28-day period was 3.81%. To the extent that we incur peso-denominated debt in the future, it could be at high interest rates.

If the Mexican economy does not continue to recover, if inflation or interest rates increase significantly or if the Mexican economy is otherwise adversely impacted, our business, financial condition or results of operations could be materially and adversely affected.

### ***Depreciation or fluctuation of the peso relative to the U.S. dollar could adversely affect our results of operations and financial condition.***

Any future significant appreciation or depreciation of the peso could impact our aggregate passenger traffic volume, which could have a material adverse effect on our results of operations. Following the devaluation of the peso and the economic crisis beginning in 1994, the aggregate passenger traffic volume in our airports in 1995 (then operated by our predecessor) decreased as compared to prior years, reflecting a decrease in Mexican passenger traffic volume that more than offset an increase in international passenger traffic volume. Another substantial decrease in value could occur, and it could (notwithstanding other factors) lead to a decrease in domestic passenger traffic that may not be offset by any increase in international passenger traffic. In 2011, the peso depreciated 12.7% against the dollar as compared to the previous year. In 2012, the peso appreciated 7.1% against the dollar. In 2013, the peso depreciated 1.0% against the dollar. Any future significant appreciation of the peso could impact our aggregate passenger volume by increasing the cost of travel for international passengers. Depreciation of the peso could impact our aggregate passenger traffic volume by increasing the cost of travel for domestic passengers.

Although all of our current indebtedness is denominated in pesos, depending on economic and credit market conditions in Mexico, we may incur dollar-denominated debt to finance investments we make in the future. Under this scenario, a devaluation of the peso would increase the debt service cost of such dollar-denominated indebtedness and result in foreign exchange losses.

In addition, fluctuations in the exchange rate between the peso and the U.S. dollar, particularly depreciations, may adversely affect the U.S. dollar equivalent of the peso price of the Series B shares on the Mexican Stock Exchange. As a result, such peso depreciations will likely affect the market price of the ADSs. Exchange rate fluctuations would also affect the ADS depositary's ability to convert into U.S. dollars, and make timely payment of, any peso cash dividends and other distributions paid in respect of the Series B shares.

***The value and prices of securities issued by Mexican companies may be adversely affected by developments in other countries.***

The Mexican economy may be, to varying degrees, affected by economic and market conditions in other countries. Although economic conditions in other countries may differ significantly from economic conditions in Mexico, investors' reactions to adverse developments in other countries may have an adverse effect on the market value of securities of Mexican issuers. For instance, the credit freeze and global recession that began in 2007 and continued into 2009 had a significant impact in Mexico. Mexico's stock market fell 48% during that period. Similarly, the European debt crisis that began in Greece and then spread to other countries such as Italy and Spain as well as European financial institutions, affected financial markets around the world and in Mexico.

In addition, economic conditions in Mexico are strongly correlated with economic conditions in the United States as a result of NAFTA and increased economic activity between the two countries. Therefore, adverse economic conditions in the United States, the termination of NAFTA or other related events could have a material adverse effect on the Mexican economy. We cannot provide assurance that events in other emerging market countries, in the United States or elsewhere, will not materially adversely affect our business, financial condition or results of operations.

***Political conditions in Mexico could materially and adversely affect Mexican economic policy or business conditions and, in turn, our operations.***

The Mexican government has exercised, and continues to exercise, significant influence over the Mexican economy. Mexican governmental actions concerning the economy could have a significant impact on Mexican private sector entities in general, as well as on market conditions and prices and returns on Mexican securities, including our securities.

Enrique Peña Nieto, a member of the Institutional Revolutionary Party ("PRI"), began a six-year term as president of Mexico on December 1, 2012, after being elected to office on July 1, 2012. As with any governmental change, this change to the country's administration may lead to significant changes in laws, public policies or regulations, may affect the political and economic environment in Mexico, and consequently, they may contribute to economic uncertainty and to heightened volatility of the Mexican capital markets and in securities issued by Mexican companies. In addition, because in the July 1, 2012 election for Congress, no single party obtained a clear majority, governmental gridlock and political uncertainty may occur.

We cannot provide any assurances that changes in the policies of Mexico's federal government will not have an adverse effect on our business, financial conditions and results of operations. Consequently we cannot provide assurances that Mexican political or social developments, over which we have no control, will not adversely affect our financial conditions, results of operations, our ability to make dividend payments to our shareholders or the market price of our securities.

***Federal tax legislation reforms in Mexico may have an adverse effect on our financial condition and results of operations.***

The Mexican government has in recent years implemented various changes to the tax laws applicable to Mexican companies, including us. The terms of our concessions do not exempt us from any changes to the Mexican tax laws. Should the Mexican government implement changes to the tax laws that result in our having significantly higher tax liability, we would be required to pay the higher amounts due pursuant to any such changes, which could have a material adverse impact on our results of operations.

Recently, tax reforms were enacted in Mexico that came into force on January 1, 2014. Among other changes, these reforms maintained the income tax rate on corporations of 30% despite the previously planned reduction; imposed withholding tax in respect of dividends paid to Mexican and foreign shareholders; eliminated deductions previously allowed in respect of payments between related parties or certain foreign corporations; limited the tax deductions for certain benefits paid to employees; and increased the value-added tax in certain areas of Mexico.

We have analyzed the scope and implications of the tax reform 2014 on us. In part based on our analysis, we filed an *amparo* in February 2014 to protect certain rights that we believe were violated by the implementation of the tax reform. Nonetheless, we cannot predict the impact that the tax reform will have, if fully implemented and applied to us, on our business, financial condition and results of operations, as a result of higher payroll taxes and higher costs due to additional compliance measures. In addition, we cannot predict the indirect impact that this legislation could have on our customers and shareholders; as one possible effect, our shareholders may be required to pay more taxes than they would have paid prior to the implementation of these tax reforms.

***Changes to Mexican laws, regulations and decrees applicable to us could have a material adverse impact on our results of operations.***

The Mexican government has in recent years implemented various changes to the laws applicable to Mexican companies, including us. The terms of our concessions do not exempt us from any changes to Mexican laws. Changes to the Mexican constitution or to any other Mexican laws could have a material adverse impact on our results of operations.

For instance, in July 2013, the Federal Law for the Prevention and Identification of Transactions with Proceeds of Illicit Origin was enacted. Its overriding goal is to build up prevention systems as part of the government strategies to combat criminal organizations and their activities, such as money laundering, terrorism financing, carjacking, robbery and kidnapping; enhance detection of activities in which illegal proceeds are engaged; and also enforce certain restrictions regarding cash transactions. This new law imposes additional obligations and responsibilities on companies' legal representatives, establishing significant fines and even criminal liability for those who do not comply with the law or who withhold relevant information.

In addition, the Mexican Bureau of Civil Aviation (*Dirección General de Aeronáutica Civil*) is responsible for establishing the official operating schedules of our airports. Outside of our airports' official hours of operation, we are permitted to double our airport charges for services that we provide. Currently, our airports at Guadalajara, Puerto Vallarta and Morelia have official operating schedules of 24 hours per day. The Mexican Bureau of Civil Aviation can issue a decree extending the official operating schedule of one or more of our other airports from its current schedule, which would deprive us of the ability to double our airport charges for off-hour services at airports for which such a decree has been issued. For instance, as of January 17, 2014, the Mexican Bureau of Civil Aviation expanded the operating schedule of our Aguascalientes airport from 6:00 a.m. to 8:00 p.m. to 6:00 a.m. to 12:00 a.m. There can be no assurance that upon issuance we will be successful in avoiding the consequences of such a decree.

***High incidences of crime in Mexico and violence related to drug trafficking could adversely affect our business.***

Travel alerts issued by the U.S. Department of State (Bureau of Consular Affairs), the most recent as of January 9, 2014 (the "Travel Warnings"), informed of the risks of traveling in Mexico due to threats to safety and security posed by transnational criminal organizations in the country and the increased violence in many towns and cities across Mexico but mostly occurring in certain cities in northern

---

## [Table of Contents](#)

Mexico, including Ciudad Juarez, Tijuana, Chihuahua City, Nogales, Matamoros, Reynosa and Monterrey, and in the central regions of Zacatecas, Morelia, Cuernavaca and San Luis Potosi. According to the Travel Warnings, while millions of U.S. citizens safely visit Mexico each year, some are victims of violence.

According to the Travel Warnings, a number of states along the border and south-western Mexico continue to experience high levels of many types of crimes with notable spikes in Chihuahua, Sinaloa, Guerrero, Michoacan, and northern Baja California.

Higher incidences of crime throughout Mexico and drug trafficking related violence could have an adverse effect on our business as it may decrease the international passenger traffic directed to Mexico.

### ***Natural disasters could adversely affect our business.***

From time to time, the Pacific and Central regions of Mexico experience torrential rains and hurricanes (particularly during the months of July through September), as well as earthquakes. Natural disasters may impede operations, damage infrastructure necessary to our operations or adversely affect the destinations served by our airports. For example, in September 2013, our Puerto Vallarta and Manzanillo airports suffered the effects of Hurricane Manuel. Although the two airports experienced only minor damage, our Manzanillo airport was closed for three days, due instead to damage to the roads to and from the airport. Any of these events could reduce our passenger traffic volume. The occurrence of natural disasters in the destinations we serve could adversely affect our business, results of operations, prospects and financial condition. We have insured the physical facilities at our airports against damage caused by natural disasters, accidents or other similar events, but do not have insurance covering losses due to resulting business interruption. Moreover, should losses occur, there can be no assurance that losses caused by damages to the physical facilities will not exceed the pre-established limits on any of our insurance policies.

### ***Increased environmental regulation and enforcement in Mexico may affect us.***

The level of environmental regulation in Mexico is increasing and the enforcement of environmental laws has become more common. There can be no assurance that environmental regulations or their enforcement will not change in a manner that could have a material adverse effect on our business, results of operations, prospects or financial condition.

### ***Minority shareholders may be less able to enforce their rights against us, our directors, or our controlling shareholders in Mexico.***

Under Mexican law, the protections afforded to minority shareholders are different from those afforded to minority shareholders in the United States. For example, because provisions concerning fiduciary duties of directors have only recently been incorporated into the new Securities Market Law, it may be difficult for minority shareholders to bring an action against directors for breach of this duty and achieve the same results as in most jurisdictions in the United States. In addition, the procedures for class action lawsuits were incorporated into Mexican law and became effective in March 2012; however, certain rules and procedures could be different than the ones in the United States. Therefore, in some cases it may be more difficult for minority shareholders to enforce their rights against us, our directors, or our controlling shareholders than it would be for minority shareholders of a U.S. company.
