

Risk Factors

We wish to caution readers that the following important factors, and those important factors described in other reports submitted to, or filed with, the Securities and Exchange Commission, among other factors, could affect our actual results and could cause our actual results to differ materially from those expressed in any forward-looking statements made by us or on our behalf. In particular, as we are a non-U.S. company, there are risks associated with investing in our American Depositary Shares, or ADS, that are not typical for investments in the shares of U.S. companies. Prior to making an investment decision, you should carefully consider all of the information contained in this document, including the following risk factors.

Risks Related to our Operations and the Airline Industry

Our performance is heavily dependent on economic conditions in the countries in which we do business and negative economic conditions in those countries could have an adverse impact on our business.

Passenger and cargo demand is heavily cyclical and highly dependant on global and local economic growth, economic expectations and foreign exchange rate variations, among other things. In the past our business has been negatively affected by global economic recessionary conditions, weak economic growth in Chile, recession in Argentina and poor economic performance in certain emerging market countries in which we operate. The occurrence of similar events in the future could adversely affect our business. We plan to continue to expand our operations based in Latin America and our performance will, therefore, continue to depend heavily on economic conditions in the region. Any of the following factors could adversely affect our business, financial condition and results of operations in the countries in which we operate:

- changes in economic or other governmental policies;
- weak economic performance, including, but not limited to, low economic growth, low consumption and/or investment rates, and increased inflation rates; or
- other political or economic developments over which we have no control.

The success of our business depends upon key regulatory issues and these issues may adversely affect our business and results of operations.

Our business is highly regulated and depends substantially upon the regulatory environment in the countries in which we operate or intend to operate. For example, price controls on fares may limit our ability to effectively apply customer segmentation profit maximization techniques ("passenger revenue management") (management techniques utilizing passenger demand forecasting and fare mix optimization techniques to maximize profit for an airline) and adjust prices to reflect cost pressures. High levels of government regulation may limit the scope of our operations and our growth plans, especially in the event of deterioration of the relations between the countries in which we operate or the public perception of foreign companies in local markets. Accordingly, regulatory issues could adversely affect our business and result of operations.

Our business, financial condition and results of operations could be adversely affected if we or certain aviation authorities (among them, those from Argentina, Brazil, Chile, Ecuador, Mexico, Peru and the United States) fail to maintain the required foreign and domestic governmental authorizations. In order to maintain the necessary authorizations issued by the Chilean *Junta Aeronáutica Civil*, which we refer to as the JAC, and technical operative authorizations issued by the Chilean *Dirección General de Aeronáutica Civil*, which we refer to as the DGAC, and other corresponding local authorities of the countries in which we operate, we must continue to comply with applicable statutes, rules and regulations pertaining to the airline industry, including any rules and regulations that may be adopted in the future.

Table of Contents

We depend on strategic alliances or commercial relationships in many of the countries in which we operate and our business may suffer if any of our strategic alliances or commercial relationships terminates.

In many of the jurisdictions in which we operate, we have found it in our interest, to maintain a number of alliances and other commercial relationships. These alliances or commercial relationships allow us to enhance our network and, in some cases, to offer our customers services that we could not otherwise offer. If any of our strategic alliances or commercial relationships and, in particular, with American Airlines, Iberia, Qantas or **oneworld**[®] deteriorates, or any of these agreements are terminated, our business, financial condition and results of operations could be negatively affected.

Our business and results of operation may suffer if we fail to obtain and maintain routes, suitable airport access, slots and other operating permits.

Our business depends upon our access to key routes and airports. Our operations could be constrained by any delay or inability to gain access to key routes or airports, including:

- limitations on our ability to process more passengers;
- the imposition of flight capacity restrictions;
- the inability to secure or maintain route rights in local markets or under bilateral agreements; or
- the inability to maintain our existing slots and obtain additional slots.

We operate numerous international routes, subject to bilateral agreements and also internal flights within Chile, Argentina, Peru and other countries, subject to local route and airport access approvals. Bilateral aviation agreements as well as local aviation approvals frequently involve political and other considerations outside of our control. Recently, we faced a reduction in international “fifth freedom” routes in Peru, which we do not expect to have a material adverse effect on our business, but which exemplifies the route changes to which we may be subject. See “Information on the Company—Business of the Company—Regulation—Route Rights” under Item 4.

There can be no assurance that existing bilateral agreements between the countries in which our companies are based and permits from foreign governments will continue. A modification, suspension or revocation of one or more bilateral agreements could have a material adverse effect on our business, financial condition and results of operations. The suspension of our permission to operate in certain airports or destinations or the imposition of other sanctions could also have a material adverse effect. We cannot assure that a change in a foreign government’s administration of current laws and regulations or that the adoption of new laws and regulations will not have a material adverse effect on our business, financial condition and results of operations.

If we are unable to obtain favorable take-off and landing authorizations at certain high-density airports, our business, financial condition and results of operations could be adversely affected. There can be no assurance that we will be able to obtain all requested authorizations and slots in the future because, among other factors, government policies regulating the distribution of the authorizations and slots are subject to change.

A failure to successfully implement our growth strategy would harm our business and the market value of the ADSs and our common shares.

Our growth strategy involves increasing the frequency of flights to the markets we currently serve and expanding our service to new markets. In order to carry out this strategy, we must be able to identify the appropriate geographic markets upon which to focus and to gain suitable airport access and route approval in these markets. There can be no assurance that the new markets we enter or in which we are seeking to expand our operations will provide passenger and cargo traffic that is sufficient to make our operations in those new markets profitable.

The expansion of our business will also require additional skilled personnel, equipment and facilities. An inability to hire and retain skilled personnel or secure the required equipment and facilities efficiently and cost-effectively may adversely affect our ability to execute our growth strategy. Expansion of our markets and flight frequencies may also strain our existing management resources and operational, financial and management information systems to the point that they may no longer be adequate to support our operations, requiring us to make significant expenditures in these areas.

Our short-haul business model could lead to lower results of operations than expected.

Our short-haul business model involves, among other things, reducing our costs and lowering fares on many short-haul routes. We have reduced our costs primarily through higher Internet penetration and sales, reduced agency commissions and increased self check-in service through Internet check-in and airport kiosks. If we are unable to control costs or if lower fares significantly reduce the yield on short-haul routes, our results of operations could be negatively affected.

Table of Contents

Our business may be adversely affected by a downturn in the airline industry caused by exogenous events that affect travel behavior or increase costs, such as outbreak of disease, war or terrorist attacks.

Demand for air transportation may be adversely impacted by exogenous events, such as natural disasters, epidemics, terrorist attacks, war or political and social instability. Situations such as these in one or more of the markets in which we operate could have a material impact on our business, financial condition and results of operations. Furthermore, these types of situations could have a prolonged effect on air transportation demand and on certain cost items.

For example, the terrorist attacks in the United States on September 11, 2001 had a severe adverse impact on the airline industry, particularly on foreign air carriers operating international service to and from the United States. Throughout South America, passenger traffic also decreased substantially, although the decrease was less severe than that in the United States. The airline industry has experienced increased costs following the September 11, 2001 terrorist attacks. Airlines have been required to adopt additional security measures and may be required to comply with more rigorous security guidelines in the future.

In addition, fuel prices and supplies, which constitute a significant cost for us, may increase as a result of any future terrorist attacks, a general increase in hostilities or a reduction in output of fuel, voluntary or otherwise, by oil-producing countries. Such increases may result in both higher airline ticket prices and decreased demand for air travel generally, which could have an adverse effect on our revenues and results of operations.

A significant portion of our cargo revenues comes from relatively few product types and may be impacted by events affecting their production or trade.

Our cargo demand, especially from Latin American exporters, is concentrated in a small number of product categories, such as salmon and produce exports from Chile and Peru, and fresh flowers from Ecuador and Colombia. Events that negatively affect the production or trade of these goods may adversely affect the volume of goods that we transport and may have a significant impact on our results of operations. Some of our cargo products are sensitive to foreign-exchange rates and, therefore, traffic volumes could be impacted by the appreciation or depreciation of local currencies.

Our operations are subject to fluctuations in the supply and cost of jet fuel, which could negatively impact our business.

Higher jet fuel prices or a shortage in the supply of fuel could cause a reduction in our scheduled service and could have a materially negative effect on our business, financial condition and results of operations. Jet fuel costs have historically accounted for a significant amount of our operating expenses, and accounted for 30.0% of our operating expenses in 2007. Both the cost and availability of fuel are subject to many economic and political factors and events that we can neither control nor predict. We have entered into fuel hedging arrangements, but there can be no assurance that such arrangements will be adequate to protect us from a significant increase in fuel prices in the near future or in the long term. Also, while these hedging arrangements are designed to limit the effect of an increase in fuel prices, some of our hedging methods may also limit our ability to take advantage of any decrease in fuel prices. Although we have implemented measures to pass a portion of incremental fuel costs to our customers, our ability to lessen the impact of any increase using this type of mechanisms may also be limited.

We rely on maintaining a high daily aircraft utilization rate to increase our revenues, which makes us especially vulnerable to delays.

One of the key elements of our business strategy is to maintain a high daily aircraft utilization rate, which measures the number of flight hours we use our aircraft per day. High daily aircraft utilization allows us to maximize the amount of revenue we generate from our aircraft and is achieved, in part, by reducing turnaround times at airports and developing schedules that enable us to fly more hours on average per day. Our rate of aircraft utilization could be adversely affected by a number of different factors that are beyond our control, including air traffic and airport congestion, adverse weather conditions and delays by third-party service providers relating to matters such as fueling and ground handling.

Furthermore, high aircraft utilization rates increase the risk that, if an aircraft falls behind schedule, it could remain behind schedule for up to two days. Such delays could result in a disruption in our operating performance, leading to customer dissatisfaction due to any resulting delays or missed connections.

We fly and depend upon Airbus and Boeing aircraft, and our business is at risk if we do not receive timely deliveries of aircraft, if aircraft from these companies becomes unavailable or if the public negatively perceives our aircraft.

As our fleet has grown, our reliance on Airbus and Boeing has also grown. As of March 31, 2008, we operated a fleet of 44 Airbus and 37 Boeing aircraft. These risks include:

- our failure or inability to obtain Airbus or Boeing aircraft, parts or related support services on a timely basis because of high demand or other factors;

Table of Contents

- the interruption of fleet service as a result of unscheduled or unanticipated maintenance requirements for these aircraft;
- the issuance of FAA or other directives restricting or prohibiting the use of Airbus or Boeing aircraft, or requiring time-consuming inspections and maintenance;
- the adverse public perception of a manufacturer as a result of an accident or other negative publicity; or
- delays between the time we realize the need for new aircraft and the time it takes us to arrange for Airbus and Boeing or from a third-party provider to deliver this aircraft.

The occurrence of any one or more of these factors could restrict our ability to use aircraft to generate profits, respond to increased demands, or could otherwise limit our operations and adversely affect our business.

We are often affected by certain factors beyond our control, including weather conditions, which can affect our operations.

Revenues for airlines depend on the number of passengers carried, the fare paid by each passenger and service factors, such as the timeliness of flight departures and arrivals. During periods of fog, ice, low temperatures, storms or other adverse weather conditions, some or all of our flights may be cancelled or significantly delayed, reducing our revenues.

Losses and liabilities in the event of an accident involving one or more of our aircraft could materially affect our business.

We are exposed to potential catastrophic losses in the event of an aircraft accident, terrorist incident or any other similar event. There can be no assurance that, as a result of an aircraft accident or significant incident:

- we will not need to increase our insurance coverage;
- our insurance premiums will not increase significantly;
- our insurance coverage will fully cover all of our liability; or
- we will not be forced to bear substantial losses.

Substantial claims resulting from an accident or significant incident in excess of our related insurance coverage could have a material adverse effect on our business, financial condition and results of operations. Moreover, any aircraft accident, even if fully insured, could cause the negative public perception that our aircraft are less safe or reliable than those operated by other airlines, which could have a material adverse effect on our business, financial condition and results of operations.

Insurance premiums may also increase due to an accident or incident affecting one of our airline affiliates or alliance partners or affecting other airlines.

High levels of competition in the airline industry may adversely affect our level of operations.

Our business, financial condition and results of operations could be adversely affected by high levels of competition within the industry, particularly the entrance of new competitors into the markets in which we operate. Airlines compete primarily over fare levels, frequency and dependability of service, brand recognition, passenger amenities (such as frequent flyer programs) and the availability and convenience of other passenger or cargo services. New and existing airlines could enter our markets and compete with us on any of these bases. Several of our competitors are larger than us and have greater brand recognition and greater resources than we do. Competing carriers include investor-owned, government-subsidized and national flag carriers of foreign countries. The U.S. Chile and other open skies agreements may subject us to further competition from international carriers. In addition to traditional competition among airline companies, we face competition from companies that provide ground transportation, especially in our domestic cargo and passenger businesses, as well as sea transportation for our cargo business. Competition could reduce our passenger traffic and cargo demand, forcing us to reduce our fare levels, which could have a material adverse effect on our revenues and level of operations.

Table of Contents

Some of our competitors may receive external support which could negatively impact our competitive position.

Some of our competitors may receive support from external sources, such as their national governments, which may be unavailable to us. Support may include, among others, subsidies, financial aid or tax waivers. This support could place us at a competitive disadvantage and adversely affect our operations and financial performance.

We may face increasing competition from low-cost carriers offering discounted fares, which could negatively impact our results of operations.

We have faced substantial and increasing competitive pressure from low-cost carriers offering discounted fares. The low-cost carriers' operations are typically characterized by point-to-point route networks focusing on the highest demand city pairs, high aircraft utilization, single class service and fewer in-flight amenities. As evidenced by the operations of Gol Intelligent Airlines Inc., or Gol, in Brazil and other markets, the low-cost carrier business model appears to be gaining acceptance in Latin America. As a result, we may continue to face new and substantial competition from low-cost carriers in the future, which could result in significant and lasting downward pressure on the fares we charge for flights on our routes and, consequently could negatively impact our results of operations.

If we are unable to incorporate leased aircraft into our fleet at acceptable rates and terms in the future, our business could be adversely affected.

A large portion of our aircraft are subject to long-term operating leases. Our operating leases typically run from three to 12 years from the date of delivery. We may face more competition for, or a limited supply of, leased aircraft, making it difficult for us to negotiate on competitive terms upon expiration of our current operating leases or to lease additional capacity required for our targeted level of operations. If we are forced to pay higher lease rates in the future to maintain our capacity and the number of aircraft in our fleet, our profitability could be adversely affected.

We are incorporating various new technologies and equipment and their phase-in may have a negative impact on our service and operating standards.

In recent years we have decided to incorporate a number of new aircraft, equipment and systems. The decision to incorporate these new elements has been based on their potential to enhance customer satisfaction, increase efficiency and/or streamline processes. However, the phase-in of these elements may temporarily result in lower service and operating standards which could affect how our customers perceive us and have a negative impact in our results of operations.

Our business may be adversely affected if we are unable to meet our significant future financing requirements.

We require significant amounts of financing to meet our aircraft capital requirements, and may require additional financing to fund our other business needs. We cannot guarantee that we will have access to or be able to arrange for financing in the future on favorable terms. If we are unable to obtain financing for a significant portion of our capital requirements, our ability to acquire new aircraft or to expand operations could be impaired and our business negatively affected.

Our business may be adversely affected by our high degree of debt and aircraft lease obligations compared to our equity capital.

We have a high degree of debt and payment obligations under our aircraft operating leases compared to equity capital. In order to finance our debt, we depend in part on our cash flow from operations. We cannot assure you that in the future we will be able to meet our payment obligations. In addition, the majority of our property and equipment is subject to liens securing our indebtedness. In the event that we fail to make payments on the secured indebtedness, creditors' enforcement of liens could limit or end our ability to use the affected property and equipment to fulfill our operational needs and thus generate revenue.

Increases in insurance costs and/or significant reductions in coverage would harm our financial condition and results of operations.

Following the 9/11 terrorist attacks, insurance companies dramatically increased airline insurance premiums and significantly reduced the maximum amount of insurance coverage available to airlines for liability to persons (other than passengers) for claims resulting from acts of terrorism, war or similar events. Although insurance costs have decreased since 2004, we cannot assure that these costs will continue to decrease or will not increase in the future.

Table of Contents

In the event of additional terrorist attacks, hijackings, airline crashes or other events adversely affecting the airline industry in the markets in which we operate, airline insurers could reduce their coverage or increase their premiums. Increases in insurance costs and/or significant reductions in coverage would harm our financial condition and results of operations.

Problems with air traffic control systems or other technical failures could interrupt our operations and have a material adverse effect on our business.

Our operations, including our ability to deliver customer service, are dependent on the effective operation of our equipment, including our aircraft, maintenance systems and reservation systems. Our operations are also dependent on the effective operation of domestic and international air traffic control systems and the air traffic control infrastructure in the markets in which we operate. Equipment failures, personnel shortages, air traffic control problems and other factors that could interrupt operations could adversely affect our operations and financial results as well as our reputation.

Our financial success depends on the availability and performance of key personnel, who are not subject to non-competition restrictions.

Our success depends to a significant extent on the ability of our senior management team and key personnel to operate and manage our business effectively. Our employment agreements with key personnel do not contain any non-competition provisions applicable upon termination. Competition for highly qualified personnel is intense. If we lose any executive officer, senior manager or other key employee and are not able to obtain an adequate replacement, or if we are unable to attract and retain new qualified personnel, our business, financial condition and results of operations could be materially adversely affected.

Our business may experience adverse consequences if we are unable to reach satisfactory collective bargaining agreements with our unionized employees.

Approximately 35% of our employees, including administrative personnel, cabin crews, flight attendants, pilots and maintenance technicians are members of unions and have contracts and collective bargaining agreements which expire on a regular basis. Our business, financial condition and results of operations could be materially adversely affected by a failure to reach agreement with any labor union representing such employees or by an agreement with a labor union that contains terms that are not in line with our expectations or that prevent us from competing effectively with other airlines.

Pressure by employees could cause operating disruptions and negatively impact our business.

Certain employee groups such as pilots, flight attendants, mechanics and our airport personnel have highly specialized skills. As a consequence, actions by these groups, such as strikes, walk-outs or stoppages, could severely disrupt our operations and negatively impact our operating and financial performance, as well as how our customers perceive us.

For example, during the third quarter of 2001, members of one of our pilot unions implemented a series of actions that disrupted our services prior to the negotiation of their collective bargaining agreement, which had a negative impact on our operations and our profitability.

Increases in our labor costs, which constitute a substantial portion of our total operating costs, would directly impact our earnings.

Labor costs constitute a significant percentage of our total operating costs, and at times in our operating history we have experienced pressure to increase wages and benefits for our employees. A significant increase in our labor costs above the assumed costs could result in a material reduction in our earnings.

We may experience difficulty finding, training and retaining employees.

Our business is labor intensive. We employ a large number of pilots, flight attendants, maintenance technicians and other operating and administrative personnel. The airline industry has, from time to time, experienced a shortage of qualified personnel, specifically pilots and maintenance technicians. In addition, as is common with most of our competitors, we may, from time to time, face considerable turnover of our employees. Should the turnover of employees, particularly pilots and maintenance technicians, sharply increase, our training costs will be significantly higher. We cannot assure you that we will be able to recruit, train and retain the qualified employees that we need to continue our current operations or replace departing employees. A failure to hire and retain qualified employees at a reasonable cost could materially adversely affect our business, financial condition and results of operations.

Failure to comply with applicable environmental regulations could adversely affect our business and reputation.

Our operations are covered by environmental regulations at local, national and international levels. These regulations cover, among other things, emissions to the atmosphere, disposal of solid waste and aqueous effluents, aircraft noise and other activities incident to our business. Future operations and financial results may vary as a result of such regulations. Compliance with these regulations and new or existing regulations that may be applicable to us in the future could increase our cost base and adversely affect our operations and financial results. In addition, failure to comply with these regulations could adversely affect us in a variety of ways, including adverse effects on our reputation.

Risks Related to Chile and Other Emerging Market Countries

Developments in Latin American countries and other emerging market countries may adversely affect the Chilean economy, negatively impact our business and results of operations and cause the market price of our common shares and ADSs to decrease.

We conduct a significant portion of our operations in emerging market countries, particularly in Latin America. As a result, economic and political developments in these countries, including future economic crises and political instability, could impact the Chilean economy or the market value of our securities and have a material adverse effect on our business, financial condition and results of operations. Although economic conditions in other emerging market countries may differ significantly from economic conditions in Chile, we cannot assure that events in other countries, particularly other emerging market countries, will not adversely affect the market value of, or market for, our common shares or ADSs.

Fluctuations in the value of the Chilean peso and other currencies in the countries in which we operate may adversely affect our revenues and profitability.

Changes in the exchange rate between the Chilean peso and the U.S. dollar or other currencies in the countries in which we operate could adversely affect our business, financial condition and results of operations. We operate in numerous countries and face the risk of variation in foreign currency exchange rates against the U.S. dollar or between the currencies of these various countries. A significant part of our indebtedness is denominated in U.S. dollars, while 16% of our revenues and 29% of our operating expenses in 2007 are denominated in currencies other than the U.S. dollar, mainly the Chilean peso. If the value of the peso or of other currencies in which revenues are denominated declines against the U.S. dollar, we will need more pesos or other local currency to repay the same amount of U.S. dollars. The Chilean peso has experienced volatility in recent years, including a nominal appreciation of 6.6% against the U.S. dollar in 2004, a nominal appreciation of 8.1% against the U.S. dollar in 2005, a nominal devaluation of 3.9% against the U.S. dollar in 2006 and a nominal appreciation of 1.6% against the U.S. dollar in 2007. The exchange rate of the Chilean peso and other currencies against the U.S. dollar may fluctuate significantly in the future. Changes in Chilean and other governmental economic policies affecting foreign exchange rates could also adversely affect our business, financial condition, results of operations and the return to our shareholders on their common shares or ADSs.

We are not required to disclose as much information to investors as a U.S. issuer is required to disclose and, as a result, you may receive less information about us than you would receive from a comparable U.S. company.

The corporate disclosure requirements that apply to us may not be equivalent to the disclosure requirements that apply to a U.S. company and, as a result, you may receive less information about us than you would receive from a comparable U.S. company. We are subject to the reporting requirements of the Securities Exchange Act of 1934, as amended, or the Exchange Act. The disclosure required of foreign issuers under the Exchange Act is more limited than the disclosure required of U.S. issuers. Publicly available information about issuers of securities listed on Chilean stock exchanges also provides less detail in certain respects than the information regularly published by listed companies in the United States or in certain other countries. Furthermore, there is a lower level of regulation of the Chilean securities markets and of the activities of investors in such markets as compared with the level of regulation of the securities markets in the United States and in certain other developed countries.

Risks Related to our Common Shares and ADSs

Our controlling shareholders may have interests that differ from those of our other shareholders.

As of March 31, 2008 our controlling shareholders, together, beneficially owned 51.84% of our voting common shares. These controlling shareholders are in a position to elect a majority of the members of our board of directors, direct our management and control substantially all matters that are to be decided by a vote of shareholders, including fundamental corporate transactions. In addition, under the terms of the deposit agreement governing the ADSs, if holders of ADSs do not provide The Bank of New York, in its capacity as depository for the ADSs, with timely instructions on the voting of the common shares underlying their ADRs, the depository will be deemed to have been instructed to give a person designated by the board of directors the right to vote those common shares.

Trading of our ADSs and common shares in the securities markets is limited and could experience further illiquidity and price volatility.

Chilean securities markets are substantially smaller, less liquid and more volatile than major securities markets in the United States. In addition, Chilean securities markets may be materially affected by developments in other emerging markets, particularly other countries in Latin America. Accordingly, although you are entitled to withdraw the common shares underlying the ADSs from the depository at any time, your ability to sell the common shares underlying ADSs in the amount and at the price and time that you wish to do so may be substantially limited. This limited trading market may also increase the price volatility of the ADSs or the common shares underlying the ADSs.

Holders of ADSs may be adversely affected by currency devaluations and foreign exchange fluctuations.

If the peso exchange rate falls relative to the U.S. dollar, the value of the ADSs and any distributions made thereon from the depository, could be adversely affected. Cash distributions made in respect of the ADSs are received by the depository (represented by the custodian bank in Chile) in pesos, converted by the custodian bank into U.S. dollars at the then prevailing exchange rate and distributed by the depository to the holders of the ADRs evidencing those ADSs. In addition, the depository will incur foreign currency conversion costs (to be borne by the holders of the ADRs) in connection with the foreign currency conversion and subsequent distribution of dividends or other payments with respect to the ADSs.

Future changes in Chilean foreign investment controls and withholding taxes could negatively affect non-Chilean residents that invest in our shares.

Equity investments in Chile by non-Chilean residents have been subject in the past to various exchange control regulations that govern investment repatriation and earnings thereon. Although not currently in effect, regulations of the Central Bank of Chile have in the past and could again require foreign investors acquiring securities in the secondary market in Chile to maintain a cash reserve or to pay a fee upon conversion of foreign currency to purchase such securities. Further, future changes in withholding taxes could negatively affect non-Chilean residents that invest in our shares.

When we established our ADS facility as part of our initial public offering in 1997, there were foreign exchange controls in Chile. At that time, in order to allow the depository and investors to be able to enter into foreign exchange transactions to repatriate from Chile amounts they received in connection with the deposited shares of common stock (including dividends and proceeds from the sale in Chile of the underlying shares of common stock and any rights with respect thereto), we entered into a foreign investment contract (the "Foreign Investment Contract") with the Central Bank and the depository. The Foreign Investment Contract guaranteed ADS investors and the depository access to the Formal Exchange Market to convert amounts from Chilean pesos into U.S. dollars and to repatriate such amounts.

In 2001, a new Compendium of Foreign Exchange Regulations (the "New Compendium") removed exchange controls and many other barriers to investment. However, even though there are no longer foreign exchange controls in Chile, all foreign investment contracts (including the Foreign Investment Contract), continue to remain in full force.

We cannot assure that additional Chilean restrictions applicable to the holders of ADRs, the disposition of the common shares underlying ADSs or the repatriation of the proceeds from an acquisition, a disposition or a dividend payment, will not be imposed or required in the future, nor could we make an assessment as to the duration or impact, were any such restrictions to be imposed or required. For further information, see "Item 10-Additional Information- Foreign Investment and Exchange Controls in Chile."
