C. Reasons for the Offer and Use of Proceeds

Not applicable.

D. Risk Factors

This section is intended to be a summary of the more detailed discussion included elsewhere in this annual report. Our business, results of operations, financial condition or prospects could be adversely affected if any of these risks occurs, and as a result, the trading price of our common shares and ADSs could decline. The risks described below are those known to us and those that we currently believe may materially affect us.

Risks Relating to Our Business and to the Brazilian Real Estate Industry

Our business, results of operations and the market price of our common shares or the ADSs may be adversely affected by weaknesses in general economic, real estate and other conditions.

The residential homebuilding and land development industry is cyclical and is significantly affected by changes in general and local economic conditions, such as:

- employment levels;
- population growth;
- consumer demand, confidence, stability of income levels and interest rates;
- availability of financing for land home site acquisitions and the availability of construction and permanent mortgages;
- inventory levels of both new and existing homes;
- supply of rental properties; and

- conditions in the housing resale market.

Furthermore, the market value of undeveloped land, buildable lots and housing inventories held by us can fluctuate significantly as a result of changing economic and real estate market conditions. If there are significant adverse changes in economic or real estate market conditions, we will have to sell homes at a loss or hold land in inventory longer than planned.

For example, in 2008, the global financial crisis adversely impacted Brazil's gross domestic product resulting in a decrease in both the number of developments launched and the rate of sales of our units. Worldwide financial market volatility may adversely impact government plans for the Brazilian real estate industry, which may have a material adverse effect on our business, our financial condition and the results of operations.

The Brazilian real estate industry is highly competitive and fragmented. We compete with several developers on availability and location of land, price, funding, design, quality, and reputation as well as for partnerships with other developers. Because our industry does not have high barriers to entry, new competitors, including international companies working in partnerships with Brazilian developers, may enter into the industry, further intensifying this competition. Some of our current potential competitors may have greater financial and other resources than we do. Furthermore, a significant portion of our real estate development and construction activity is conducted in the states of São Paulo and Rio de Janeiro, areas where the real estate market is highly competitive due to a scarcity of properties in desirable locations and the relatively large number of local competitors. If we are not able to compete effectively, our business, our financial condition and the results of our operations could be adversely affected.

Problems with the construction and timely completion of our real estate projects, as well as third party projects for which we have been hired as a contractor, may damage our reputation, expose us to civil liability and decrease our profitability.

The quality of work in the construction of our real estate projects and the timely completion of these projects are major factors that determine our reputation, and therefore our sales and growth. Delays in the construction of our projects or defects in materials and/or workmanship may occur. Any defects could delay the completion of our real estate projects, or, if such defects are discovered after completion, expose us to civil lawsuits by purchasers or tenants. These factors may also adversely affect our reputation as a contractor for third party projects, since we are responsible for our construction services and the building itself for five years. Construction projects often involve delays in obtaining, or the inability to obtain, permits or approvals from the relevant authorities. In addition, construction projects may also encounter delays due to adverse weather conditions, natural disasters, fires, delays in the provision of materials or labor, accidents, labor disputes, unforeseen engineering, environmental or geological problems, disputes with contractors and subcontractors, unforeseen conditions at construction sites, disputes with surrounding landowners or other events. In addition, we may encounter previously unknown conditions at or near our construction sites that may delay or prevent construction of a particular project. If we encounter a previously unknown condition at or near a site, we may be required to correct the condition prior to continuing construction and there may be a delay in the construction of a particular project. The occurrence of any one or more of these problems in our real estate projects could adversely affect our reputation and our future sales.

We may incur construction and other development costs for a project that exceeds our original estimates due to increases over time in interest rates, real estate taxes, material costs, labor costs or other costs. We may not be able to pass these increased costs on to purchasers. Construction delays, scarcity of skilled workers, cost overruns and adverse conditions may also increase project development costs. In addition, delays in the completion of a project may result in a delay in the commencement of cash flow, which would increase our capital needs.

Our inability to acquire adequate capital to finance our projects could delay the launch of new projects and adversely affect our business.

We expect that the continuing expansion and development of our business will require significant capital, including working capital, which we may be unable to obtain on acceptable terms, or at all, to fund our capital expenditures and operating expenses, including working capital needs. We may fail to generate sufficient cash flow from our operations to meet our cash requirements. Furthermore, our capital requirements may vary materially from those currently planned if, for example, our revenues do not reach expected levels or we have to incur unforeseen capital expenditures and make investments to maintain our competitive position. If this is the case, we may require additional financing sooner than anticipated, or we may have to delay some of our new development and expansion plans or otherwise forgo market opportunities. Future borrowing instruments such as credit facilities are likely to contain restrictive covenants, particularly

in light of the recent economic downturn and unavailability of credit, and/or may require us to pledge assets as security for borrowings under those facilities. Our inability to obtain additional capital on satisfactory terms may delay or prevent the expansion of our business, which would have an adverse effect on our business. As of the date of this annual report, our net debt level and obligations to venture partners was in excess of R\$2.0 billion, our cash and cash equivalents was in excess of R\$1.4 billion and our total debt was R\$3.1 billion and obligations to venture partners was R\$0.3 billion.

Changing market conditions may adversely affect our ability to sell our home inventories at expected prices, which could reduce our margins and adversely affect the market price of our common shares or the ADSS.

As a homebuilder, we must constantly locate and acquire new tracts of land for development and development home sites to support our homebuilding operations. There is a lag between the time we acquire land for development or developed home sites and the time that we can bring the properties to market and sell homes. As a result, we face the risk that demand for housing may decline, costs of labor or materials may increase, interest rates may increase, currencies may fluctuate and political uncertainties may occur during this period and that we will not be able to dispose of developed properties at expected prices or profit margins or within anticipated time frames or at all. Significant expenditures associated with investments in real estate, such as maintenance costs, construction costs and debt payments, cannot generally be reduced if changes in the economy cause a decrease in revenues from our properties. The market value of home inventories, undeveloped tracts of land and desirable locations can fluctuate significantly because of changing market conditions. In addition, inventory carrying costs (including interest on funds unused to acquire land or build homes) can be significant and can adversely affect our performance. Because of these factors, we may be forced to sell homes and other real properties at a loss or for prices that generate lower profit margins than we anticipate. We may also be required to make material write-downs of the book value of our real estate assets in accordance with Brazilian and U.S. GAAP if values decline. The occurrence of these factors may adversely affect our business and results of operations.

We are subject to risks normally associated with permitting our purchasers to make payments in installments; if there are higher than anticipated defaults or if our costs of providing that financing increase, then our profitability could be adversely affected.

As is common in our industry, we and the special purpose entities, or "SPEs," in which we participate permit some purchasers of the units in our projects to make payments in installments. As a result, we are subject to the risks associated with this financing, including the risk of default in the payment of principal or interest on the loans we make as well as the risk of increased costs for the funds raised by us. In addition, our term sales agreements usually bear interest and provide for an inflation adjustment. If the rate of inflation increases, the loan payments under these term sales agreements may increase, which may lead to a higher rate of payment default. If the default rate among our purchasers increases, our cash generation and, therefore, our profitability could be adversely affected.

In the case of a payment default after the delivery of financed units, Brazilian law provides for the filing of a collection claim to recover the amount owed or to repossess the unit following specified procedures. The collection of overdue amounts or the repossession of the property is a lengthy process and involves additional costs. It is uncertain that we can recover the full amount owed to us or that if we repossess the unit, we can re-sell the unit at favorable terms or at all.

In March 2009, the Brazilian government announced the creation of a public housing program called "Minha Casa, Minha Vida" that aims to reduce the housing deficit in Brazil, which as of 2007 is estimated to be 6.3 million houses. The program calls for government investment of more than R\$30 billion to be made through financing made available from Caixa Econômica Federal, or the CEF, and is focused on building one million houses for families with monthly incomes of up to ten times the minimum wage. Under this program, 600 thousand houses will be built for families with monthly incomes of three to ten times the minimum wage, which are our target clients through our Tenda brand. This program offers, among other things, long-term financing, lower interest rates, greater share of the property financed to the client, subsidies based on income level, lower insurance costs and the creation of a guarantor fund to refinance debt in case of unemployment.

The affordable entry-level segment is strongly dependent on the availability of financing. The scarcity of financing, the increase in interest rates, the reduction in financing terms, share of financing per unit and subsidies or any other modification in other financing terms and conditions may adversely affect the performance of the affordable entry-level segment.

If we or the SPEs in which we participate fail to comply with or become subject to more onerous government regulations, our business could be adversely affected.

We and the SPEs we participate in are subject to various federal, state and municipal laws and regulations, including those relating to construction, zoning, use of soil, environmental protection, historical patrimony and consumer protection and antitrust. We are required to obtain, maintain and renew on a regular basis permits, licenses and authorizations from various governmental authorities in order to carry out our projects. We strive to maintain compliance with these laws and regulations. If we are unable to maintain or achieve compliance with these laws and regulations, we could be subject to fines, project shutdowns, cancellation of licenses and revocation of authorizations or other restrictions on our ability to develop our projects, which could have an adverse impact on our financial condition. In addition, our contractors and subcontractors are required to comply with various labor and environmental regulations and tax and regulatory obligations. Because we are secondary obligors to these contractors and subcontractors, if they fail to comply with these regulations or obligations, we may be subject to penalties by the relevant regulatory bodies.

Regulations governing the Brazilian real estate industry as well as environmental laws have tended to become more restrictive over time. We cannot assure you that new and stricter standards will not be adopted or become applicable to us, or that stricter interpretations of existing laws and regulations will not occur. Furthermore, we cannot assure you that these more onerous regulations would not cause delays in our projects or that we would be able to get the relevant permits and licenses. Any such event may require us to spend additional funds to achieve compliance with such new rules and therefore make the development of our projects more costly, which can adversely affect our business and the market price of our common shares or the ADSs.

If there is a scarcity of financing and/or increased interest rates, this may decrease the demand for real estate properties, which could negatively affect our results of operations and the market price of our common shares or the ADSs.

The scarcity of financing and/or an increase in interest rates or in other indirect financing costs may adversely affect the ability or willingness of prospective buyers to purchase our products and services, especially prospective low income buyers. A majority of the bank financing obtained by prospective buyers comes from the Housing Financial System (*Sistema Financeiro de Habitação*), or "SFH," which is financed by funds raised from savings account deposits. The Brazilian Monetary Council (*Conselho Monetário Nacional*), or the "CMN," often changes the amount of such funds that banks are required to make available for real estate financing. If the CMN restricts the amount of available funds that can be used to finance the purchase of real estate properties, or if there is an increase in interest rates, there may be a decrease in the demand for our residential and commercial properties and for the development of lots of land, which may adversely affect our financial position and results of operations.

We and other companies in the real estate industry frequently extend credit to our clients. As a result, we are subject to risks associated with providing financing, including the risk of default on amounts owed to us (principal and interest), as well as the risk of increased costs of funding our operations. An increase in inflation would raise the nominal amounts due from our clients, pursuant to their sales agreements, which may increase their rates of default. If this were to occur, our cash generation and, therefore, our operating results may be adversely affected. In addition, we obtain financings from financial institutions at different rates and subject to different indexes and may be unable to match our debt service requirements with the terms of the financings we grant to our clients. The mismatch of rates and terms between the funds we obtain and the financings we grant may adversely affect us.

Some of our subsidiaries use significant funding from the home financing programs of the CEF and, as a result, are subject to institutional and operating changes in the CEF.

The CEF has several home financing programs for the low-income segment, which are used by Construtora Tenda S.A., or Tenda, to fund its activities. The CEF is a state-owned financial institution and is subject to political influence that may change the availability or the terms of the home financing programs. The cancellation, suspension, interruption or a significant change in such programs may affect our growth estimates and our business. Furthermore, the suspension, interruption or slowdown in the CEF's activities to approve projects, grant financing to our clients and evaluate construction process, among other activities, may adversely impact our business, financial capacity, results of operations and the market price of our common shares and ADSs. Financing to the affordable entry-level segment is primarily made available through the CEF. Any changes in such financing would force us to seek new sources of financing and the availability of funds under similar conditions is limited, which would have an adverse effect on our results of operations.

The real estate industry is dependent on the availability of credit, especially in the affordable entry-level segment.

One of our main strategies is to expand our operations to the affordable entry-level segment in which clients are strongly dependent on bank financing to purchase homes. This financing may not be available on favorable terms to our clients, or at all. Changes in the Real Estate Financing System (*Sistema de Financiamento Imobiliário*), or SFI, and in the SFH rules, the scarcity of available resources or an increase in interest rates may affect the ability or desire of such clients to purchase homes, consequently affecting the demand for homes. These factors would have a material adverse effect on our business, financial condition and results of operations.

Because we recognize sales income from our real estate properties under the percentage of completion method of accounting, an adjustment in the cost of a development project may reduce or eliminate previously reported revenue and income.

We recognize income from the sale of units in our properties based on the percentage of completion method of accounting, which requires us to recognize income as we incur the cost of construction. Total cost estimates are revised on a regular basis as the work progresses, and adjustments based upon such revisions are reflected in our results in accordance with the method of accounting used. To the extent that these adjustments result in an increase, a reduction or an elimination of previously reported income, we will recognize a credit to or a charge against income, which could have an adverse effect on our previously reported revenue and income.

Our participation in SPEs creates additional risks, including potential problems in our financial and business relationships with our partners.

We invest in SPEs with other real estate developers and construction companies in Brazil. The risks involved with SPEs include the potential bankruptcy of our SPE partners and the possibility of diverging or inconsistent economic or business interests between us and our partners. If an SPE partner fails to perform or is financially unable to bear its portion of the required capital contributions, we could be required to make additional investments and provide additional services in order to make up for our partner's shortfall. In addition, under Brazilian law, the partners of an SPE may be liable for obligations of an SPE in particular areas, including tax, labor, environmental and consumer protection. These risks could have an adverse effect on us.

We may experience difficulties in finding desirable land tracts and increases in the price of land may increase our cost of sales and decrease our earnings.

Our continued growth depends in large part on our ability to continue to acquire land and to do so at a reasonable cost. As more developers enter or expand their operations in the Brazilian home building industry, land prices could rise significantly and suitable land could become scarce due to increased demand or decreased supply. A resulting rise in land prices may increase our cost of sales and decrease our earnings. We may not be able to continue to acquire suitable land at reasonable prices in the future, which could adversely affect our business.

The market value of our inventory of undeveloped land may decrease, thus adversely affecting our results of operations.

We own tracts of undeveloped land that are part of our inventory for future developments. We also intend to increase our inventory and acquire larger tracts of land. The market value of these properties may significantly decrease from the acquisition date to the development of the project as a result of economic downturns or market conditions, which would have an adverse effect on our results of operations.

Increases in the price of raw materials may increase our cost of sales and reduce our earnings.

The basic raw materials used in the construction of our homes include concrete, concrete block, steel, aluminum, bricks, windows, doors, roof tiles and plumbing fixtures. Increases in the price of these and other raw materials, including increases that may occur as a result of shortages, duties, restrictions, or fluctuations in exchange rates, could increase our cost of sales. Any such cost increases could reduce our earnings and adversely affect our business.

If we are not able to implement our growth strategy as planned, or at all, our business, financial condition and results of operations could be adversely affected.

We plan to grow our business by selectively expanding to meet the growth potential of the Brazilian residential market. We believe that there is increasing competition for suitable real estate development sites. We may not find suitable additional sites for development of new projects or other suitable expansion opportunities.

We anticipate that we will need additional financing to implement our expansion strategy and we may not have access to the funding required for the expansion of our business or such funding may not be available to us on acceptable terms. We may finance the expansion of our business with additional indebtedness or by issuing additional equity securities. We could face financial risks and covenant restrictions associated with incurring additional indebtedness, such as reducing our liquidity and access to financial markets and increasing the amount of cash flow required to service such indebtedness, or associated with issuing additional stock, such as dilution of ownership and earnings.

Our insurance policies may not be sufficient to cover damages that we may suffer.

We maintain insurance policies against certain risks, such as damages, engineering risks, fire, land slides, storms, gas explosions and civil liabilities stemming from construction errors. There can be no assurance that such policies will always be available or provide sufficient coverage for certain damages. In addition, there are certain risks that may not be covered by such policies, such as damages resulting from wars, force majeure or the interruption of certain activities. Furthermore, we are required to pay penalties and other fines whenever there is delay in the delivery of our units, and such penalties and fines are not covered by our insurance policies.

Moreover, we cannot guarantee that we will be able to renew our current insurance policies under favorable terms, or at all. As a result, insufficient coverage of our insurance or our inability to renew the existing insurance policies could have an adverse effect on our financial condition and results of operations.

Our level of indebtedness could have an adverse effect on our financial health, diminish our ability to raise additional capital to fund our operations and limit our ability to react to changes in the economy or the real estate industry.

As of December 31, 2009, our total debt was R\$3.1 billion and our short-term debt was R\$801.0 million. In addition, as of December 31, 2009, our cash and cash equivalents available was R\$1.4 billion and our net debt represented 83.8% of our shareholders' equity including the noncontrolling interest. Our indebtedness has variable interest rates. A hypothetical 1% adverse change in interest rates would have had an annualized unfavorable impact of R\$31.2 million on our earnings and cash flows, based on the net debt level as of December 31, 2009.

Our level of indebtedness could have important negative consequences for us. For example, it could:

- require us to dedicate a large portion of our cash flow from operations to fund payments on our debt, thereby reducing the availability of our cash flow to fund working capital, capital expenditures and other general corporate purposes;
- increase our vulnerability to adverse general economic or industry conditions;
- limit our flexibility in planning for, or reacting to, changes in our business or the industry in which we operate;
- limit our ability to raise additional debt or equity capital in the future or increase the cost of such funding;
- restrict us from making strategic acquisitions or exploring business opportunities; and
- place us at a competitive disadvantage compared to our competitors that have less debt.

We may not be successful in managing and integrating the businesses and activities of Alphaville, Cipesa and Tenda.

We have recently acquired controlling stakes in three Brazilian real estate companies: (1) Alphaville Urbanismo S.A., one of the largest residential community development companies in Brazil; (2) Cipesa Empreendimentos Imobiliários S.A., one the leading homebuilder in the State of Alagoas; and (3) Construtora Tenda S.A., a residential homebuilder with

a focus on the affordable entry-level segment. However, we may not be successful in managing and integrating these companies, which could adversely affect our business.

Failures or delays by our third party contractors may adversely affect our reputation and business and expose us to civil liability.

We engage third party contractors to provide services for our projects. Therefore, the quality of work in the construction of our real estate projects and the timely completion of these projects may depend on factors that are beyond our control, including the quality and timely delivery of building materials and the technical skills of the outsourced professionals. Such outsourcing may delay the identification of construction problems and, consequently, the correction of such problems. Any failures, delays or defects in the services provided by our third party contractors may adversely affect our reputation and relationship with our clients, which would adversely affect our business and results of operations.

Unfavorable judicial or administrative decisions may adversely affect us.

We currently are, and may be in the future, defendants in several judicial and administrative proceedings related to civil, labor and tax matters. We cannot assure you that we will obtain favorable decisions in such proceedings, that such proceedings will be dismissed, or that our provisions for such proceedings are sufficient. Unfavorable decisions that impede our operations, as had been initially planned, or that result in a claim amount that is not adequately covered by provisions in our balance sheet may adversely affect our business and financial condition.

We may be held responsible for labor liabilities of our third party contractors.

We may be held responsible for the labor liabilities of our third party contractors and obligated to pay for fines imposed by the relevant authorities in the event that our third party contractors do not comply with applicable legislation. As of December 31, 2009, we had a total of R\$71.0 million of labor liabilities and provisions for such liabilities in the amount of R\$8.9 million. 85% of the labor claims were commenced by employees of our third party contractors. An adverse result in such claims would cause an adverse effect on our business.

Failure to keep members of our senior management and/or our ability to recruit and retain qualified professionals may have a material adverse effect on our business, financial condition and results of operations.

Our future success depends on the continued service and performance of our senior management and our ability to recruit and retain qualified professionals. None of the members of our senior management are bound to long-term labor contracts or non-compete agreements and there can be no assurance that we will successfully recruit and retain qualified professionals to our management as our business grows. The loss of any key professionals or our inability to recruit or retain qualified professionals may have an adverse effect on our business, financial condition and results of operations.

Changes in Brazilian GAAP due to its migration towards IFRS may adversely affect our results.

Law No. 11,638 /07, effective as of January 1, 2008 and as amended by Law No. 11,941/09, amended the Brazilian corporate law regarding corporate accounting practices in Brazil. The changes primarily sought to update the law to facilitate the process of converging Brazilian GAAP to IFRS, and permitted the CVM to issue new accounting standards and procedures consistent with international accounting standards. Portions of these regulations are currently in effect. Although the changes became effective on January 1, 2010, the CVM still permits public companies to present their quarterly reports under the prior rules.

With respect to the real estate sector, CVM Resolution No. 612 dated December 22, 2009, which approved Technical Interpretation ICPC02, addresses the recognition of costs and revenues by real estate companies prior to the completion of a property and applies to financial statements from the fiscal year beginning on January 1, 2010. Beginning on January 1, 2010, costs and revenues will be recognized only when the property is transferred to the buyer, which normally occurs upon the completion of the construction. Since we recognize our revenues during construction and before the completion of projects, these laws and regulations may adversely affect our results of operations. In addition, the process of converging Brazilian GAAP to IFRS, specifically the accounting procedures applicable to real estate companies, may have a significant impact on our financial statements and adversely impact our results of operations and dividend distributions.

We are currently evaluating the potential effects of the new regulation. In addition, new accounting regulations and pronouncements were issued in 2009 by the CPC and CVM and became effective on January 1, 2010. There can be no assurance that these modifications will not materially and adversely affect our financial statements, in particular our

revenues and our results of operations and impact the comparability of our financial statement for the year ended December 31, 2009 with our financial statements for year ending December 31, 2010.

Risks Relating to Brazil

Brazilian economic, political and other conditions, and Brazilian government policies or actions in response to these conditions, may negatively affect our business and results of operations and the market price of our common shares or the ADSs.

The Brazilian economy has been characterized by frequent and occasionally extensive intervention by the Brazilian government and unstable economic cycles. The Brazilian government has often changed monetary, taxation, credit, tariff and other policies to influence the course of Brazil's economy. For example, the government's actions to control inflation have at times involved setting wage and price controls, blocking access to bank accounts, imposing exchange controls and limiting imports into Brazil. We have no control over, and cannot predict, what policies or actions the Brazilian government may take in the future.

Our business, results of operations, financial condition and prospects, as well as the market prices of our common shares or the ADSs, may be adversely affected by, among others, the following factors:

- exchange rate movements;
- exchange control policies;
- expansion or contraction of the Brazilian economy, as measured by rates of growth in gross domestic product, or "GDP;"
- inflation;
- tax policies;
- other economic, political, diplomatic and social developments in or affecting Brazil;
- interest rates;
- energy shortages;
- liquidity of domestic capital and lending markets; and
- social and political instability.

Uncertainty over whether the Brazilian government may implement changes in policy or regulations may contribute to economic uncertainty in Brazil and to heightened volatility in the Brazilian securities markets as well as securities issued abroad by Brazilian issuers. As a result, these uncertainties and other future developments in the Brazilian economy may adversely affect us and our business and results of operations and the market price of our common shares.

Inflation, and government measures to curb inflation, may adversely affect the Brazilian economy, the Brazilian securities market, our business and operations and the market prices of our common shares or the ADSs.

At times in the past, Brazil has experienced high rates of inflation. According to the General Market Price Index (*Índice Geral de Preços-Mercado*), or IGP-M, inflation rates in Brazil were 1.2% in 2005, 3.8% in 2006, 7.8% in 2007, 9.8% in 2008 and (1.7)% in 2009. In addition, according to the Amplified Consumer Price Index (*Índice de Preços ao Consumidor Ampliado*), or "IPCA," Brazilian consumer price inflation rates were 5.05% in 2005, 3.1% in 2006, 4.5% in 2007, 5.9% in 2008 and 4.3% in 2009. Our term sales agreements usually provide for an inflation adjustment linked to the INCC. The INCC increased by 5.0% in 2006, 6.2% in 2007, 11.9% in 2008 and 3.14% in 2009. The Brazilian government's measures to control inflation have often included maintaining a tight monetary policy with high interest rates, thereby restricting availability of credit and reducing economic growth. Inflation, actions to combat inflation and public speculation about possible additional actions have also contributed materially to economic uncertainty in Brazil and to heightened volatility in the Brazilian securities markets.

Brazil may experience high levels of inflation in future periods. Periods of higher inflation may slow the rate of growth of the Brazilian economy, which could lead to reduced demand for our products in Brazil and decreased net sales. Inflation is also likely to increase some of our costs and expenses, which we may not be able to pass on to our customers and, as a result, may reduce our profit margins and net income. In addition, high inflation generally leads to higher domestic interest rates, and, as a result, the costs of servicing our *reais*-denominated debt may increase, resulting in lower net income. Inflation and its effect on domestic interest rates can, in addition, lead to reduced liquidity in the domestic capital and lending markets, which could affect our ability to refinance our indebtedness in those markets. In addition, increases in inflation rates would increase the outstanding debt of our customers, which could increase default levels and affect our cash flows. Any decline in our net operating revenue or net income and any deterioration in our financial condition would also likely lead to a decline in the market price of our common shares and the ADSs.

Social, political and economic events and the perception of risks, especially in other emerging economies, may adversely affect the Brazilian economy, our business and the market price of our securities.

The Brazilian capital markets are influenced by the Brazilian market and economic conditions and, to a certain extent, by the conditions in other Latin American countries and other emerging market countries. Investors' reactions to developments in certain countries may have an adverse effect on the market value of the securities of Brazilian issuers. Crises in other Latin American and emerging market countries normally trigger a significant outflow of funds and the reduction of foreign investment in Brazil. For example, in 2001 Argentina announced a moratorium on its public debt after a recession and a period of political instability, which affected investor perceptions towards the Brazilian capital markets for many years. Crises in other Latin American and emerging market countries may diminish investor interest in the securities of Brazilian issuers, including ours, which could negatively affect the market price of our common shares.

The market for securities issued by Brazilian companies is influenced, to a varying degree, by international economic and market conditions generally, especially in the United States. The prices of shares traded on the BM&FBOVESPA have been historically affected by the fluctuation of interest rates and stock exchange indexes in the United States. Events in other countries or capital markets could have an adverse effect on the price of our shares, which could make it more difficult for us to access the capital markets and obtain financing on acceptable terms in the future, or at all.

Fluctuations in interest rates may have an adverse effect on our business and the market prices of our common shares and the ADSs.

The Central Bank establishes the basic interest rate target for the Brazilian financial system by reference to the level of economic growth of the Brazilian economy, the level of inflation and other economic indicators. Debts of companies in the real estate industries, including ours, are subject to the fluctuation of market interest rates, as established by the Central Bank. Should such interest rates increase, the costs relating to the service of our debt obligations would also increase.

As of December 31, 2009, our indebtedness was denominated in *reais* and subject to Brazilian floating interest rates, such as the Reference Interest Rate (*Taxa Referencial*), or "TR," and the Interbank Deposit Certificate Rate (*Certificado de Depósito Interbancário*), or "CDI rate." Any increase in the TR rate or the CDI rate may have an adverse impact on our financial expenses, our results of operations and on the market price of our common shares or the ADSs. We are not a party to any hedging instruments with respect to our indebtedness.

Restrictions on the movement of capital out of Brazil may adversely affect your ability to receive dividends and distributions on the ADSs and on our common shares, or the proceeds of any sale of our common shares.

Brazilian law permits the Brazilian government to impose temporary restrictions on conversions of Brazilian currency into foreign currencies and on remittances to foreign investors of proceeds from their investments in Brazil, whenever there is a serious imbalance in Brazil's balance of payments or there are reasons to expect a pending serious imbalance. The Brazilian government last imposed remittance restrictions for approximately six months in 1989 and early 1990. The Brazilian government may take similar measures in the future. Any imposition of restrictions on conversions and remittances could hinder or prevent holders of our common shares or the ADSs from converting into U.S. dollars or other foreign currencies and remitting abroad dividends, distributions or the proceeds from any sale in Brazil of our common shares. Exchange controls could also prevent us from making payments on our U.S. dollar-denominated debt obligations and hinder our ability to access the international capital markets. As a result, exchange controls restrictions could reduce the market prices of our common shares and the ADSs.

Changes in tax laws may increase our tax burden and, as a result, adversely affect our profitability.

The Brazilian government regularly implements changes to tax regimes that may increase our and our customers' tax burdens. These changes include modifications in the rate of assessments and, on occasion, enactment of temporary taxes, the proceeds of which are earmarked for designated governmental purposes. In April 2003, the Brazilian government presented a tax reform proposal, which was mainly designed to simplify tax assessments, to avoid internal disputes within and between the Brazilian states and municipalities, and to redistribute tax revenues. The tax reform proposal provided for changes in the rules governing the federal Social Integration Program (*Programa de Integração Social*), or "PIS," the federal Contribution for Social Security Financing (*Contribuição para Financiamento da Seguridade Social*), or "COFINS," the state Tax on the Circulation of Merchandise and Services (*Imposto Sobre a Circulação de Mercadorias e Serviços*), or "ICMS," and other taxes. The effects of these proposed tax reform measures and any other changes that result from enactment of additional tax reforms have not been, and cannot be, quantified. However, some of these measures, if enacted, may result in increases in our overall tax burden, which could negatively affect our overall financial performance.

Risks Relating to Our Common Shares and the ADSs

International economic and market conditions, especially in the United States, may adversely affect the market price of the ADSs.

The market for securities issued by Brazilian companies is influenced, to a varying degree, by international economic and market conditions generally. Because our ADSs are listed on the New York Stock Exchange, or the "NYSE," adverse market conditions and economic and/or political crises, especially in the United States, such as the subprime mortgage lending crisis in 2007 and 2008 and the financial and credit crises in 2008, have at times resulted in significant negative impacts on the market price of our ADSs. Despite the fact that our clients, whether financed by us or by Brazilian banks through resources obtained in the local market, are not directly exposed to the mortgage lending crisis in the United States, there are still uncertainties as to whether such crisis may indirectly affect homebuilders worldwide. The uncertainties generated by the subprime crisis may affect the market prices of our ADSs and could also make it more difficult for us to access the capital markets and finance our operations in the future on acceptable terms or at all.

Developments and the perception of risks in other countries, especially emerging market countries, may adversely affect the market prices of our common shares and the ADSs.

The market for securities issued by Brazilian companies is influenced, to varying degrees, by economic and market conditions in other emerging market countries, especially other Latin American countries. Although economic conditions are different in each country, the reaction of investors to developments in one country may cause the capital markets in other countries to fluctuate. Developments or adverse economic conditions in other emerging market countries have at times resulted in significant outflows of funds from, and declines in the amount of foreign currency invested in, Brazil. For example, in 2001, after a prolonged recession, followed by political instability, Argentina announced that it would no longer continue to service its public debt. The economic crisis in Argentina negatively affected investors' perceptions of Brazilian securities for several years. Economic or political crises in Latin America or other emerging markets may significantly affect perceptions of the risk inherent in investing in the region, including Brazil.

The Brazilian economy is also affected by international economic and general market conditions, especially economic and market conditions in the United States. Share prices on the São Paulo Stock Exchange (*BM&F Bovespa S.A. – Bolsa de Valores Mercadorias e Futuros*), or the "BM&FBOVESPA," for example, have historically been sensitive to fluctuations in U.S. interest rates as well as movements of the major U.S. stock indexes, particularly in the current worldwide economic downturn. Developments in other countries and securities markets could adversely affect the market prices of our common shares and the ADSs and could also make it more difficult for us to access the capital markets and finance our operations in the future on acceptable terms or at all.

The relative volatility and the lack of liquidity of the Brazilian securities market may adversely affect you.

The Brazilian securities market is substantially smaller, less liquid, more concentrated and more volatile than major securities markets in the United States. This may limit your ability to sell our common shares and the common shares underlying your ADSs at the price and time at which you wish to do so. The BM&FBOVESPA, the only Brazilian stock exchange, had a market capitalization of approximately US\$1.3 trillion as of December 31, 2009 and an average daily trading volume of US\$2.7 billion for 2009. In comparison, the NYSE had a market capitalization of US\$18.9 trillion as of December 31, 2009 and an average daily trading volume of approximately US\$4.9 billion for 2009.

There is also a large concentration in the Brazilian securities market. The ten largest companies in terms of market capitalization represented 50.4% of the aggregate market capitalization of the BM&FBOVESPA as of December 31, 2009. The top ten stocks in terms of trading volume accounted for 45% of all shares traded on the BM&FBOVESPA in 2009. Gafisa's average daily trading volume on the BM&FBOVESPA and in the NYSE in 2009 were US\$21.5 million and US\$19.4 million, respectively.

Shares eligible for future sale may adversely affect the market value of our common shares and the ADSs.

Certain of our shareholders have the ability, subject to applicable Brazilian laws and regulations and applicable securities laws in the relevant jurisdictions, to sell our shares and the ADSs. We cannot predict what effect future sales of our shares or ADSs may have on the market price of our shares or the ADSs. Future sales of substantial amounts of such shares or the ADSs, or the perception that such sales could occur, could adversely affect the market prices of our shares or the ADSs.

The economic value of your investment in our company may be diluted.

We may need additional funds in the future, and as a result, we may issue additional common shares and/or convertible securities. Any additional funds obtained by such a capital increase may dilute your interest in our company. We are currently negotiating the structure for the acquisition of 20% of Alphaville's shares. This participation was valued at R\$126.5 million and we intend to pay for it through the issuance of 9,797,792 shares. This transaction is subject to relevant corporate authorizations. In addition, we may acquire the remaining 20% of Alphaville's shares that we currently do not own through the issuance of new shares, which we intend to complete by 2012. As a result of these new issuances of shares, you may experience additional dilution of your investment in our company. See "Item 4. Information on the Company—A. History and Development of the Company."

Holders of our common shares or the ADSs may not receive any dividends or interest on shareholders' equity.

According to our by-laws, we must generally pay our shareholders at least 25% of our annual net profit as dividends or interest on shareholders' equity, as calculated and adjusted under the Brazilian corporate law method. This adjusted net profit may be used to absorb losses or for the payment of statutory participation on profits to debenture holders, employees or members of our management, which would ultimately reduce the amount available to be paid as dividends or interest on shareholders' equity. Additionally, the Brazilian corporate law allows a publicly traded company like ours to suspend the mandatory distribution of dividends in any particular year if our board of directors informs our shareholders that such distributions would be inadvisable in view of our financial condition or cash availability. For 2003, 2004 and 2005, we did not distribute dividends. In 2007, we distributed dividends in the total amount of R\$11.0 million, or R\$0.10 per share (without giving effect to the stock split of one existing share into two newly issued shares approved at our shareholders' meeting held on February 22, 2010 and excluding shares held in treasury), for fiscal year 2006. In April 2008, our shareholders approved the distribution of dividends for the fiscal year 2007 in the amount of R\$27.0 million, or R\$0.21 per share (without giving effect to the stock split of one existing share into two newly issued shares approved at our shareholders' meeting held on February 22, 2010 and excluding shares held in treasury), which were fully paid to our shareholders on April 29, 2008. On April 30, 2009, our shareholders approved the distribution of dividends for the fiscal year 2008 in the amount of R\$26.1 million, or R\$0.20 per share (without giving effect to the stock split of one existing share into two newly issued shares approved at our shareholders' meeting held on February 22, 2010 and excluding shares held in treasury), which was fully paid to our shareholders on December 18, 2009. Based on the results of the fiscal year 2009, our management has recommended the distribution of a dividend in the amount of R\$50.7 million, or R\$0.15 per share (giving effect to the stock split of one existing share into two newly issued shares approved at our shareholders' meeting held on February 22, 2010 and excluding shares held in treasury), which will be fully paid to our shareholders during the fiscal year 2010 upon board approval. See "Item 8. Financial Information—A. Consolidated Statements and Other Financial Information—Dividend Policy."

Holders of ADSs may find it difficult to exercise voting rights at our shareholders' meetings.

Holders of ADSs may exercise voting rights with respect to our common shares represented by ADSs only in accordance with the terms of the deposit agreement governing the ADSs. Holders of ADSs will face practical limitations in exercising their voting rights because of the additional steps involved in our communications with ADS holders. For example, we are required to publish a notice of our shareholders' meetings in specified newspapers in Brazil. Holders of our common shares will be able to exercise their voting rights by attending a shareholders' meeting in person or voting by proxy. By contrast, holders of ADSs will receive notice of a shareholders' meeting from the ADR depositary following our notice to the depositary requesting the depositary to do so. To exercise their voting rights, holders of ADSs must

instruct the ADR depository on a timely basis. This voting process necessarily will take longer for holders of ADSs than for holders of our common shares. Common shares represented by ADSs for which no timely voting instructions are received by the ADR depository from the holders of ADSs shall not be voted.

Holders of ADSs also may not receive the voting materials in time to instruct the depository to vote the common shares underlying their ADSs. In addition, the depository and its agents are not responsible for failing to carry out voting instructions of the holders of ADSs or for the manner of carrying out those voting instructions. Accordingly, holders of ADSs may not be able to exercise voting rights, and they will have little, if any, recourse if the common shares underlying their ADSs are not voted as requested.

No single shareholder or group of shareholders holds more than 50% of our capital stock, which may increase the opportunity for alliances between shareholders as well as conflicts between them.

No single shareholder or group of shareholders holds more than 50% of our capital stock. There is no guidance in Brazilian corporate law for publicly-held companies without an identified controlling shareholder. Due to the absence of a controlling shareholder, we may be subject to future alliances or agreements between our shareholders, which may result in the exercise of a controlling power over our company by them. In the event a controlling group is formed and decides to exercise its controlling power over our company, we may be subject to unexpected changes in our corporate governance and strategies, including the replacement of key executive officers. Additionally, we may be more vulnerable to a hostile takeover bid. The absence of a controlling group may also jeopardize our decision-making process as the minimum quorum required by law for certain decisions by shareholders may not be reached and, as a result, we cannot guarantee that our business plan will be effected. Any unexpected change in our management team, business policy or strategy, any dispute between our shareholders, or any attempt to acquire control of our company may have an adverse impact on our business and result of operations.

Holders of ADSs will not be able to enforce the rights of shareholders under our by-laws and Brazilian corporate law and may face difficulties in protecting their interests because we are subject to different corporate rules and regulations as a Brazilian company.

Holders of ADSs will not be direct shareholders of our company and will be unable to enforce the rights of shareholders under our by-laws and Brazilian corporate law.

Our corporate affairs are governed by our by-laws and Brazilian corporate law, which differ from the legal principles that would apply if we were incorporated in a jurisdiction in the United States, such as the State of Delaware or New York, or elsewhere outside Brazil. Although insider trading and price manipulation are crimes under Brazilian law, the Brazilian securities markets are not as highly regulated and supervised as the U.S. securities markets or the markets in some other jurisdictions. In addition, rules and policies against self-dealing or for preserving shareholder interests may be less well-defined and enforced in Brazil than in the United States and certain other countries, which may put holders of the ADSs at a potential disadvantage. Corporate disclosures also may be less complete or informative than for a public company in the United States or in certain other countries.

Holders of ADSs may face difficulties in serving process on or enforcing judgments against us and other persons.

We are a corporation organized under the laws of Brazil, and all of our directors and executive officers and our independent public accountants reside or are based in Brazil. Most of the assets of our company and of these other persons are located in Brazil. As a result, it may not be possible for holders of ADSs to effect service of process upon us or these other persons within the United States or other jurisdictions outside Brazil or to enforce against us or these other persons judgments obtained in the United States or other jurisdictions outside Brazil. Because judgments of U.S. courts for civil liabilities based upon the U.S. federal securities laws may be enforced in Brazil only if certain conditions are met, holders may face greater difficulties in protecting their interests in the case of actions by us or our directors or executive officers than would shareholders of a U.S. corporation.

Changes in Brazilian tax laws may have an adverse impact on the taxes applicable to a disposition of the ADSs.

According to Law No. 10,833 of December 29, 2003, the disposition of assets located in Brazil by a non-resident to either a Brazilian resident or a non-resident is subject to taxation in Brazil, regardless of whether the disposition occurs outside or within Brazil. In these terms, gains arising from a disposition of our common shares by a non-resident of Brazil to another non-resident of Brazil are subject to income tax.

Our interpretation of Law No. 10,833 is that ADSs should not be regarded as assets located in Brazil. Accordingly, the disposition of our ADSs by a non-resident to either a Brazilian resident or a non-resident should not be subject to taxation in Brazil. However, in the event that a disposition of our ADSs is considered a disposition of assets located in Brazil, this tax law could result in the imposition of withholding taxes on the disposition of our ADSs by a non-resident of Brazil. We are not aware of precedents on the application of Law No. 10,833 to ADSs and, accordingly, we are unable to predict whether Brazilian courts would apply it to a disposition of our ADSs by a non-resident of Brazil. See “Item 10. Additional Information–E. Taxation –Brazilian Tax Considerations–Gains.”

Any gain or loss recognized by a U.S. Holder (as defined in “Item 10. Additional Information–E. Taxation–Material U.S. Federal Income Tax Considerations”) would be treated as U.S. source gain or loss for all foreign tax credit purposes. U.S. Holders should consult their tax advisers as to whether the Brazilian tax on gain would be creditable against the holder’s U.S. federal income tax on foreign-source income from other sources.

Judgments of Brazilian courts with respect to our common shares will be payable only in reais.

If proceedings are brought in the courts of Brazil seeking to enforce our obligations in respect of the common shares, we will not be required to discharge our obligations in a currency other than reais. Under Brazilian exchange control limitations, an obligation in Brazil to pay amounts denominated in a currency other than reais may be satisfied in Brazilian currency only at the exchange rate, as determined by the Central Bank, in effect on the date the judgment is obtained, and such amounts are then adjusted to reflect exchange rate variations through the effective payment date. The then, prevailing exchange rate may not afford non-Brazilian investors with full compensation for any claim arising out of or related to our obligations under our common shares or the ADSs.

Holders of ADSs may be unable to exercise preemptive rights with respect to our common shares underlying the ADSs.

Holders of ADSs will be unable to exercise the preemptive rights relating to our common shares underlying ADSs unless a registration statement under the U.S. Securities Act of 1933, as amended, or the “Securities Act,” is effective with respect to those rights or an exemption from the registration requirements of the Securities Act is available. We are not obligated to file a registration statement with respect to the shares relating to these preemptive rights or to take any other action to make preemptive rights available to holders of ADSs. We may decide, in our discretion, not to file any such registration statement. If we do not file a registration statement or if we, after consultation with the ADR depositary, decide not to make preemptive rights available to holders of ADSs, those holders may receive only the net proceeds from the sale of their preemptive rights by the depositary, or if they are not sold, their preemptive rights will be allowed to lapse.

An exchange of ADSs for common shares risks loss of certain foreign currency remittance and Brazilian tax advantages.

The ADSs benefit from the certificate of foreign capital registration, which permits Citibank N.A., as depositary, to convert dividends and other distributions with respect to our common shares into foreign currency, and to remit the proceeds abroad. Holders of ADSs who exchange their ADSs for common shares will then be entitled to rely on the depositary’s certificate of foreign capital registration for five business days from the date of exchange. Thereafter, they will not be able to remit non-Brazilian currency abroad unless they obtain their own certificate of foreign capital registration, or unless they qualify under Resolution CMN 2,689, which entitles certain investors to buy and sell shares on Brazilian stock exchanges without obtaining separate certificates of registration.

If holders of ADSs do not qualify under Resolution CMN 2,689, they will generally be subject to less favorable tax treatment on distributions with respect to our common shares. There can be no assurance that the depositary’s certificate of registration or any certificate of foreign capital registration obtained by holders of ADSs will not be affected by future legislative or regulatory changes, or that additional Brazilian law restrictions applicable to their investment in the ADSs may not be imposed in the future.

Our bylaws do not contain any provisions that discourage hostile takeovers.

No single shareholder or group of shareholders holds more than 50% of our capital stock. In addition, our bylaws do not contain any provisions that discourage or prohibit our acquisition or the acquisition of a significant share of our capital stock. The absence of such provisions makes us vulnerable to future acquisitions by our existing shareholders or new investors, which could result in significant changes in our management and strategy, adversely affecting us. We may default on certain of our material contracts in the event we cease to have a dispersed ownership control structure.
