C. Reasons for the Offer and Use of Proceeds

Not applicable.

D. Risk Factors

Risks Relating to Peru

Economic, social and political developments in Peru including political instability, inflation and unemployment could have a material adverse effect on our business.

All of our operations and customers are located in Peru. Accordingly, our financial condition and results of operation depend on the level of economic activity in Peru. Our financial condition and results of operations could be affected by changes in economic and other policies of the Peruvian government (which has exercised and continues to exercise substantial influence over many aspects of the private sector), and by other economic and political developments in Peru, including devaluation or depreciation, currency exchange controls, inflation, economic downturns, political instability, corruption scandals, social unrest and terrorism.

In the past, Peru has experienced political instability that included a succession of regimes with disparate economic policies and programs that created uncertainty for domestic and foreign investors. At present, Peru is a democracy under the administration of President Martin Vizcarra, who took office in March 2018 after peacefully assuming the presidency following President Pedro Pablo Kuczynski's resignation following allegations of his involvement in a corruption scandal. Prior governments have imposed controls on prices, exchange rates, local and foreign investment and international trade, restricted the ability of companies to dismiss employees, expropriated private sector assets and prohibited the remittance of profits to foreign investors. We cannot be certain whether the Peruvian government will continue or be able to pursue its agenda, including business-friendly and open-market economic policies that stimulate economic growth and social stability.

During the 1980s and the early 1990s, Peru experienced severe terrorist activity targeted against, among others, the government and the private sector. Since then, terrorist activity in Peru has been mostly confined to small-scale operations in the Huallaga Valley and the Valleys of the Rivers Apurimac, Ene and Mantaro, or "VRAEM," areas, both in the Eastern part of the country. The Huallaga Valley and VRAEM constitute the largest areas of coca cultivation in the country and thus serve as a hub for the illegal drug trade. Terrorist activity and the illegal drug trade continue to be key challenges for Peruvian authorities. Any violence derived from the drug trade or a resumption of large-scale terrorist activities which may occur could hurt our operations and, could disrupt the economy of Peru and our business. In addition, Peru has, from time to time, experienced social and political turmoil, including riots, nationwide protests, strikes and street demonstrations. Despite Peru's ongoing economic growth and stabilization, the social and political tensions and high levels of poverty and unemployment continue. Future government policies to preempt or respond to social unrest could include, among other things, expropriation, nationalization, suspension of the enforcement of creditors' rights and new taxation policies. These policies could adversely and materially affect the Peruvian economy and our business.

Furthermore, some of the measures proposed by the new administration may generate political and social opposition, which may in turn prevent the current government from adopting such measures as proposed. Political parties opposed to the current administration retained a majority of the seats in the Peruvian Congress in the last elections, which will require the current administration to seek political support from such opposition parties for its economic proposals. Additionally, the opposition in the Peruvian Congress called a vote to impeach former President Kuczynski in connection with certain alleged links to Brazilian construction firm Odebrecht. The vote took place on December 21, 2017 and only obtained 78 (60%) of the 87 (67%) votes needed for impeachment. Therefore, former President Kuczynski remained in his position. This created political instability going forward and further uncertainty in the ability of the current administration to pass measures that it expects to implement. During this process, the sol weakened against the U.S. dollar and local currency bond yields rose.

On December 24, 2017, President Kuczynski used his constitutional presidential prerogative and pardoned former President Alberto Fujimori who was serving a 25 year sentence, it is believed, in an attempt to gain support from the ruling majority in the Peruvian Congress. The move triggered protests in Peru from various sectors of Peruvian society and political parties.

On March 8, 2018, a group of 30 congressmen (from a total of 130) introduced a motion to hold a new impeachment proceeding against former President Kuczynski. On March 15, 2018, the Peruvian Congress approved such motion with an affirmative vote of 87 members of Congress, and President Kuczynski was summoned to appear before Congress on March 22, 2018.

On March 21, 2018, President Kuczynski presented resigned his office as president, due to allegations in the context of the impeachment proceeding planned by Congress. On March 23, 2018, Congress accepted his resignation and his first vice president, Martin Vizcarra, was sworn in as acting president. On April 2, 2018, President Vizcarra appointed the members of his cabinet. We cannot assure you whether President Vizcarra will remain in office for the remainder of the presidential term, which ends in July 2021. If President Vizcarra and the current second vice president both resign, the president of the Congress would become acting president and Congress would call for new elections, which may include both new presidential and congressional elections. The political instability caused by these events could affect macroeconomic conditions in the country, including currency volatility, as well as have a negative effect on our business.

Another source of risk is related to political and social unrest in areas where mining, oil and gas operations take place. In recent years, Peru has experienced protests against mining projects in several regions around the country. Mining is an important part of the Peruvian economy, with mining and oil and gas as of December 31, 2017, accounted for approximately 3.2% of the country's GDP according to the Central Bank of Peru. On several occasions, local communities have opposed these operations and accused them of polluting the environment and hurting agricultural and other traditional economic activities. In late 2011 and throughout 2012, social and political tension peaked around Conga, a gold project in the northern region of Cajamarca. The launch of Conga, which involved investments of approximately US\$4.5 billion, failed as a result of the protests. Social demands and conflicts could have an effect on the Peruvian economy.

The foregoing political uncertainty and presidential decisions could further increase interest rate and currency volatility, as well as adversely and materially affect the Peruvian economy and our business.

A depreciation or devaluation of the sol could have a material adverse effect on our financial condition and results of operations.

A significant depreciation or devaluation of the Sol may affect us due to the fact that our revenues are denominated in soles while 100% of our indebtedness, as of December 31, 2017, is denominated in U.S. dollars. As a result, we are exposed to currency mismatch risks. As of December 31, 2017, we maintain cross currency swap hedging agreements in aggregate principal amount of 100% of our current U.S. dollar-denominated debt to hedge against the foreign exchange risks associated. Nonetheless, a devaluation of the sol against the U.S. dollar and increased exchange rate volatility such as the one recently experienced due to political uncertainty would increase the cost of our interest payments obligations which could have a material adverse effect on our financial condition and results of operations.

The re-implementation by the Peruvian government of restrictive exchange rate policies and other laws could have an adverse effect on our business, financial condition and results of operations.

Since 1991, the Peruvian economy has undergone a major transformation from a highly protected and regulated system to a free market economy. During this period, protectionist and interventionist laws and policies have been dismantled. The Peruvian economy has responded to this transformation by growing at a compound average annual rate of 4.6% during the period from 1994 to 2017. Currently, foreign exchange rates are determined by market conditions, with regular open-market operations by the Central Bank of Peru in the foreign exchange market to reduce volatility in the value of Peru's currency against the U.S. dollar.

We cannot assure you that the Peruvian government will not institute restrictive exchange rate policies in the future. Any such restrictive exchange rate policy could have a material adverse effect on our business, financial condition and results of operations and adversely affect our ability to repay debt or other obligations and restrict our access to international financing.

In addition, if the Peruvian government were to institute restrictive exchange rate policies in the future, we might be obligated to seek an authorization from the Peruvian government to make payments on the notes and the guarantees. We cannot assure you that such an authorization would be obtained. Any such exchange rate restrictions or the failure to obtain such an authorization could materially and adversely affect our ability to make payments under US dollar denominated debt and to pay dividends on our ADRs.

Increased inflation in Peru could have an adverse effect on the Peruvian long-term credit market, as well as the Peruvian economy generally and, therefore, on our financial condition and results of operations.

In the past, Peru has suffered through periods of high and hyper-inflation, which has materially undermined the Peruvian economy and the government's ability to create conditions that support economic growth. In response to increased inflation, the Central Bank of Peru, which sets the Peruvian basic interest rate, may increase or decrease the basic interest rate in an attempt to control inflation or foster economic growth. Increases in the base interest rate could adversely affect our results of operations, increasing the cost of certain funding. Additionally, a return to a high-inflation environment would also undermine Peru's foreign competitiveness, with negative effects on the level of economic activity and employment, while increasing our operating costs and adversely impacting our operating margins if we are unable to pass the increased costs on to our customers.

Changes in tax laws or their interpretation may increase our tax burden and, as a result, negatively affect our business.

The Peruvian Congress and government regularly implement changes to tax laws that may increase our tax burden, or the tax burden of our subsidiaries. These changes may include modifications in our taxable base, tax rates and, on occasion, the enactment of temporary taxes that in some cases have become permanent taxes or changes to VAT exemptions applicable to certain of our operations in the Amazonian region. We are unable to estimate the outcomes that these changes may have on business. In that sense, the Peruvian government recently introduced several changes related to transfer pricing rules and formal obligations in order to comply with BEPS (base erosion and profit shifting) Guidelines on transactions performed between related parties or with the intervention of low or no-tax jurisdictions, such as the obligation to file new local-files, master-files and country-by-country reports with the Peruvian tax authority, and to adjust taxable bases accordingly for income tax purposes.

The effects of any tax reforms that could be proposed in the future and any other changes that result from the enactment of additional reforms have not been, and cannot be, quantified. However, any changes to our tax regime or interpretations thereof (including in connection with the tax rates, tax base (*base imponible*), deductions rules, payments in advance regime (*regimen de pagos a cuenta*), time of payment or the establishment of new taxes thereof, may result in increases in our overall costs and/or our overall compliance costs, which could negatively affect our results of operation.

Our operations could be adversely affected by an earthquake, flood or other natural disasters.

Severe weather conditions and other natural disasters in areas in which we have shopping malls may materially adversely affect our operations. Peru is affected by El Niño, an oceanic and atmospheric phenomenon that causes a warming of temperatures in the Pacific Ocean, resulting in heavy rains off the coast of Peru and various other effects in other parts of the world. The effects of El Niño, which typically occurs every two to seven years, include flooding and the destruction of fish populations and agriculture, and accordingly have a negative impact on Peru's economy. For example, in early 2017, El Niño adversely affected agricultural production, transportation services, tourism and commercial activity, caused widespread damage to infrastructure and displaced significant populations. El Niño is expected to have produced a 1.2% drop in GDP in 2017 relative to 2016 figures. The Peruvian government estimated that El Niño caused US\$2.8 billion in damages in affected regions in the first half of 2017. Peru also is located in an area that experiences seismic activity and occasionally is affected by earthquakes. For example, in 2007, an earthquake with a magnitude of 7.9 on the Richter scale struck the central coast of Peru, severely damaging the region south of Lima. Such conditions may result in physical damage to our properties, closure of one or more of our shopping centers or our tenants-stores, inadequate work forces in our markets, temporary disruptions in the supply of products to our tenants, delays in the delivery of goods to our tenants' stores and a reduction in the availability of products in our tenants' stores. In addition, adverse climate conditions (due to climate change or otherwise) and adverse weather patterns, such as droughts or floods that impact growing conditions and the quantity and quality of crops, may materially adversely affect the availability or cost of certain commodities or other products within our supply chain. Any of these factors may disrupt and materially adversely affect our operations.

The Peruvian economy could be adversely affected by economic developments in regional or global markets.

Financial and securities markets in Peru are influenced by economic and market conditions in regional or global markets. Although economic conditions vary from country to country, investors' perceptions of the events occurring in one country may adversely affect cash flows and securities from issuers in other countries, including Peru. For example, the Peruvian economy was adversely affected by the political and economic events that occurred in several emerging economies in the 1990s, including in Mexico in 1994, which impacted the fair value of securities issued by companies from markets throughout Latin America. The crisis in the Asian markets beginning in 1997 also negatively affected markets throughout Latin America. Similar adverse consequences resulted from the economic crisis in Russia in 1998, the Brazilian devaluation in 1999 and the Argentine crisis in 2001. In addition, Peru's economy continues to be affected by events in the economies of its major regional partners and in developed economies that are trading partners or that affect the global economy.

The 2008 and 2009 global economic and financial crisis substantially affected the financial system, including Peru's securities market and economy. Additionally, the debt crisis in Europe that began with financial crises in Greece, Spain, Italy and Portugal, reduced the confidence of foreign investors, caused volatility in the securities markets and affected the ability of companies to obtain financing globally. Doubts about the pace of global growth, particularly in the United States, contributed to already weak international growth in 2011, 2012 and 2013. Brexit continues to create volatility and uncertainty in a number of financial markets. Any interruption to the recovery of developed economies, the continued effects of the global crisis in 2008 and 2009, a worsening or resurgence of the debt crisis in Europe, impacts due to Brexit or a new economic and/or financial crisis, or a combination of the above, could affect the Peruvian economy, and consequently, materially adversely affect our business. In particular, the Peruvian economy recently has suffered the effects of fluctuating commodity prices in the international markets, a decrease in export volumes, a decrease in foreign direct investment inflows and, as a result, a decline in foreign reserves and an increase in its current account deficit. Further, the United States has imposed new tariffs that could undermine economic growth and raise costs for manufacturers around the world.

Additionally, adverse developments in regional or global markets or an increase in the perceived risks associated with investing in emerging markets in the future could adversely affect the Peruvian economy and, as a result, adversely affect our business, financial condition and results of operations.

A decline in the prices of certain commodities in the international markets could have a material adverse effect on our financial condition and results of operations.

In 2017, traditional exports, in particular mineral products, fishing products, agricultural products and petroleum and its derivatives, represented 73.8% of Peru's total exports, according to the figures published by the Central Bank of Peru. Changes in commodity prices in the international markets, especially traditional minerals which represented 60.5% of exports by value as of the third quarter of 2017 (according to the Central Bank of Peru), may have an adverse impact on government finances, which could affect both investor confidence and the sustainability of government expenditure and social programs. Thus, a decline in commodity prices could, ultimately, affect the political environment in Peru, especially as regional and local governments are particularly reliant on tax revenue from mining concerns. By potentially affecting private sector demand and investor confidence, lower commodity prices could also affect the retail sector, leading to, for example, a decline in purchasing power and consumer spending. A decline in commodity prices could also materially affect demand for our discretionary products as well as lower traffic.

Corruption and ongoing high-profile corruption investigations may hinder the growth of the Peruvian economy and have a negative impact on our business and operations.

Peruvian authorities are currently conducting several high-profile corruption investigations relating to the activities of certain Brazilian companies and its Peruvian partners in the construction and infrastructure sectors, which have resulted in suspension or delay of important infrastructure projects that were otherwise operational and permitted. The overall delay relating to such projects has resulted in a drop in GDP growth and overall infrastructure investment.

In July 2017, former President Ollanta Humala and his wife were detained in connection with a corruption probe and in February 2018, a Peruvian judge submitted a request to extradite former president Alejandro Toledo on allegations of bribery, both in connection with Brazilian construction company Odebrecht SA. Several high-profile politicians are subject to corruption investigations. Corruption and corruption investigations could directly affect the Peruvian government, divert resources that would otherwise be focused on developing the economy, create political instability, and result in slower or negative economic growth, such as has recently happened in Brazil. In turn, this could impact our ability to successfully implement our growth and expansion strategies.

On March 8, 2018, a group of 30 congressmen (of 130) introduced a motion for a new impeachment proceeding against President Kuczynski. On March 15, 2018, the Peruvian Congress approved such motion with an affirmative vote of 87 members of Congress, and President Kuczynski was summoned to testify before Congress on March 22, 2018.

On March 21, 2018, President Kuczynski announced his decision to resign his office as president, due to allegations of corruption he faced. On March 23, 2018, Congress accepted his resignation and his first vice president, Martín Vizcarra, was sworn in as acting president. On April 2, 2018, President Vizcarra appointed the members of his cabinet. We cannot assure you whether President Vizcarra will remain in office for the remainder of the presidential term, which ends in July 2021. If President Vizcarra and the current second vice president both step down, the president of Congress would become acting president and Congress would call for new elections, which may include both new presidential and congressional elections. The political instability caused by these events could affect macroeconomic conditions in the country, including currency volatility, as well as have a negative effect on our business and the price and volatility of the notes.

See "Economic, social and political developments in Peru including political instability, inflation and unemployment could have a material adverse effect on our business."

Risks Relating to our Business and Industry

We are subject to the possible entry of domestic or international competitors into our market, which could decrease our market share and profitability.

The cement market in Peru is competitive and is currently served mainly by three main groups which together supply most of the cement consumed in the country. In the cement industry, the location of a production plant tends to limit the market a plant can serve because transportation costs are high, reducing profit margins. Historically, we have supplied the northern region of Peru while two other groups have supplied the central (which includes the Lima metropolitan area) and southern regions of Peru, driven principally by the location of production facilities and distribution focus. However, competition could intensify if other manufacturers decide to enter our market.

We may face increased competition if the other Peruvian cement manufacturers, despite incremental freight costs, expand their distribution of cement to the northern region of Peru, or if they develop a cement plant in the north, particularly if the cement markets in Lima or other areas of Peru become saturated. Some large foreign cement manufacturers have announced plans to build cement plants in the central region of the country. If competition intensifies in the central region of Peru due to the presence of foreign cement manufacturers or otherwise, it may have price repercussions in our market.

We also face the possibility of competition from the entry into our market of imported clinker for grinding facilities, cement or other materials or products from foreign manufacturers, which may have significantly greater financial resources than us, particularly as production capacity continues to exceed depressed demand in other parts of the world and transportation costs decrease.

We may not be able to maintain our market share if we cannot match our competitors' prices or keep pace with the development of new products. If any of these events were to occur, our business, financial condition and results of operations could be adversely affected.

Demand for our cement products is highly related to housing construction in northern Peru, which, in turn, is affected by economic conditions in the region.

Cement consumption is highly related to construction levels. Demand for our cement products depends, in large part, on residential construction in the north of Peru, which consists mostly of low-income families gradually building or improving their own homes without technical assistance, which we refer to as *auto-construcción*. We estimate that in 2017, *auto-construcción* accounted for approximately 62.2% of our cement sales. Residential construction, in turn, is highly correlated to prevailing economic conditions in Peru. A decline in economic conditions would reduce household disposable income and cause a significant reduction in residential construction, leading to a decrease in demand for cement. As a result, a deterioration of economic conditions in the northern region of Peru would have a material adverse effect on our financial performance. We cannot assure you that growth in Peru's GDP, or the contribution to GDP growth attributable to the northern region of the country, will continue at the recent pace or at all.

A reduction in private or public construction projects in the northern region of Peru would have a material adverse effect on our business, financial condition and results of operations.

We estimate that in 2017, approximately 23.9% of our cement sales were derived from private construction (other than *auto-construcción*) and 13.9% from public construction in the north of Peru. Significant interruptions or delays in, or the termination of, private or public construction projects may adversely affect our business, financial condition and results of operations. Private and public construction levels in our market depend on investments in the region which, in turn, are affected by economic conditions. During the first nine months of 2017, there was a decline in public spending due to El Niño phenomenon and the Odebrecht corruption scandal which delayed investments. However, we expect a significant pickup in public investment during 2018-2021 due to reconstruction works in the North from El Niño related damages.

The level of public infrastructure construction also depends, to a great extent, on the priorities and financial resources of the national, regional and local governmental authorities. Although the anticipated increase in Peru's large infrastructure projects has been delayed, this remains an important growth driver for the country and also a necessity due to Peru's significant infrastructure deficit. In the North, significant spending will be directed towards reconstruction works to address the damage caused by Coastal El Niño, based on Peru's "Reconstruction with Changes" Plan. This Plan has an approved budget of S/25.7 billion (US\$7.9 billion). We cannot assure you that the Peruvian government will continue promoting recent levels of public infrastructure spending in our market. A reduction in public infrastructure spending in our market would adversely affect our business, financial condition and results of operations.

Our business, financial condition and results of operations may be adversely affected by increases in energy prices or shortages in the supply of energy.

Energy accounts for a significant percentage of our production costs. Our principal energy sources are coal and electricity. In 2017, the cost of energy represented approximately 28.1% of our cement production costs, compared to 26.2% in 2016. We use a substantial amount of coal as a source of fuel in our production process. Most of the coal we use is anthracite coal which we purchase from domestic suppliers and import a small amount of bituminous coal from suppliers primarily in Colombia in each case at market prices. We do not have long-term coal supply agreements, and we do not engage in hedging transactions in connection with the price of coal. Any shortage or interruption in the supply of coal could also disrupt our operations. In addition, the price of coal is largely driven by the price of oil, and, as a result, increases in international oil prices are likely to affect the price of coal and adversely affect our results of operations.

We have a long-term electricity supply agreement with Electroperú S.A. ("Electroperú"), a government-owned company, to serve the electricity requirements of our Pacasmayo and Piura facilities until 2025. We have also entered into a supply agreement with Electro Oriente S.A. ("ELOR") to supply the Rioja facility until November 2022. Our business, financial condition and results of operations could be materially and adversely affected by higher costs, interruptions, and unavailability or shortage of electricity. We have no back-up power system at our plants and cannot assure you that, in case of interruption or failure in Electroperú's or ELOR's operations, we will have access to other energy sources at the same prices and conditions, which could adversely affect our business, financial condition and results of operations. Moreover, electricity to our plants is transmitted through the Peruvian Electricity Interconnection System (*Sistema Eléctrico Interconectado Nacional del Perú*, or "SEIN"). Any interruptions or failures in SEIN's system would also have a material adverse effect on our business, financial condition and results of operations.

In the recent past, we have experienced electricity rationing, limiting our use of electricity to certain times of the day. In such cases, we were forced to readjust our production schedules in order to ensure that our production process was not interrupted. In the event of any future rationing of electricity, we may not be able to readjust quickly enough and our production process may be interrupted. Future shortages or efforts to respond to or prevent shortages, such as rationing, may adversely impact the cost or supply of electricity for our operations.

A significant increase in the prices of coal or electricity would increase our costs of production. We may not be able to increase the prices of our cement products in the future if the prices of coal or electricity rises, which would adversely affect our business, financial condition and results of operations.

Changes in the cost or availability of admixtures and raw materials supplied by third parties may adversely affect our business, financial condition and results of operations.

We use certain admixtures and raw materials in the production of cement, such as gypsum, blast furnace slag and iron that we obtain from third parties. In 2017, our cost of admixtures and raw materials supplied by third parties as a percentage of our cement production costs was approximately 5.1% compared to 10.5% in 2016. We do not have long-term contracts for the supply of admixtures, raw materials and imported clinker that we use and if existing suppliers cease operations or reduce or eliminate production of these products, our costs to procure these materials may increase significantly or we may be obligated to procure alternatives to replace these products.

We may make future acquisitions that may not achieve expected benefits.

Our strategic initiatives include pursuing acquisitions that tend to diversify our existing portfolio of products and services and expand our geographic footprint. In the future, we may decide to expand by acquiring other companies in Peru or abroad. Any future acquisitions will depend on our ability to identify suitable candidates, negotiate acceptable terms, and obtain financing for the acquisitions. If future acquisitions are significant, they could change the scale of our business and expose us to new geographic, political, operating and financial risks. In addition, each acquisition involves a number of risks, such as the diversion of our management's attention from our existing business to integrating the operations and personnel of the acquired business, possible adverse effects on our results of operations during the integration process, our inability to achieve the intended objectives of the combination and potential unknown liabilities associated with the acquired assets.

We may not be able to obtain the funding required to implement future strategies.

Our strategies to continue to expand our cement production capacity and distribution network require significant capital expenditures. We cannot assure you that we will generate sufficient cash flow from operations, or that we will have access to external financing sources, to adequately fund such capital expenditures. Our access to external sources of financing will depend on many factors, including factors beyond our control, such as conditions in the global capital markets and investors' risk perception of investing in Peru and in emerging markets generally. Any equity or debt financing, if available, may not be on terms that are favorable to us. If our access to external financing is limited, we may not be able to execute our strategy, which could adversely affect our business, financial condition and results of operations.

In addition, the indenture pursuant to which we issued our 4.50% Senior Notes due 2023 contains covenants that limit our ability and that of our restricted subsidiaries to incur additional indebtedness if we do not meet certain financial ratios. If we are unable to incur additional debt to fund our future strategies, our business could be adversely affected.

We are subject to risks related to litigation and administrative proceedings that could adversely affect our business and financial performance in the event of an unfavorable ruling.

The nature of our business exposes us to litigation relating to product liability claims, labor, health and safety matters, environmental matters, regulatory, tax and administrative proceedings, governmental investigations, tort claims and contract disputes, among other matters. In the past, we have been subject to antitrust and tax proceedings or investigations. While we contest these matters vigorously and make insurance claims when appropriate, litigation is inherently costly and unpredictable, making it difficult to accurately estimate the outcome of actual or potential litigation. Although we establish provisions as we deem necessary, the amounts that we reserve could vary significantly from any amounts we actually pay due to the inherent uncertainties in the estimation process. We cannot assure you that these or other legal proceedings will not materially affect our ability to conduct our business, financial condition and results of operations in the event of an unfavorable ruling.

Our business is subject to a number of operational risks, which may adversely affect our business, financial condition and results of operations.

Our business is subject to several industry-specific operational risks, including accidents, natural disasters, labor disputes and equipment failures. Such occurrences could result in damage to our production facilities and equipment, and/or the injury or death of our employees and others involved in our production process. Moreover, such accidents or failures could lead to environmental damage, loss of resources or intermediate goods, delays or the interruption of production activities and monetary losses, as well as damage to our reputation. Our insurance may not be sufficient to cover losses from these events, which could adversely affect our business, financial condition and results of operations.

In addition, key equipment at our facilities, such as our mills and kilns, may deteriorate sooner than we currently estimate. Such deterioration of our assets may result in additional maintenance or capital expenditures, and could cause delays or the interruption of our production activities. If these assets do not generate the cash flows we expect, and we are not able to procure replacement assets in an economically feasible manner, our business, financial condition and results of operations may be materially and adversely affected.

Our business depends on the continued operation of our Pacasmayo and Piura facilities.

Our production facilities in Pacasmayo and Piura are essential to our business. In 2017, approximately 87.4% of our total cement and all of our quicklime was produced at the Pacasmayo and Piura facilities. We estimate that for 2018, close to 41% of our total cement will be produced at the new Piura facility, and 46.4% at the Pacasmayo facility. These plants are subject to normal hazards of operating any cement production facility, including accidents, natural disasters and unexpected malfunctioning of the equipment. Any interruption in our operation of the Pacasmayo or Piura facilities or a decrease in the effective capacity of these facilities would adversely affect our results of operations, and any prolonged disruption in the operation of these facilities would have a material adverse effect on our business, financial condition and results of operations.

The introduction of cement substitutes into the market and the development of new construction techniques could have a material adverse effect on our business, financial condition and results of operations.

Materials such as plastic, aluminum, ceramics, glass, wood and steel can be used in construction as a substitute for cement. In addition, other construction techniques, such as the use of drywall, could decrease the demand for cement and concrete. In Peru, drywall has only been introduced into the housing construction market in recent years and it is not widely used. However, the use of drywall for housing construction could increase significantly in the future as it becomes more popular. In addition, research aimed at developing new construction techniques and modern materials may introduce new products in the future. The use of substitutes for cement could cause a significant reduction in the demand and prices for our cement products.

Our success depends on key members of our management.

Our success depends largely on the efforts and strategic vision of our executive management team and board of directors. The loss of the services of some or all of our executive management and members of our board of directors could have a material adverse effect on our business, financial condition and results of operations.

The execution of our business plan also depends on our ongoing ability to attract and retain additional qualified employees capable of operating our plants. Due to the limited pool of skilled workers in the north of Peru or workers from other regions willing to relocate to the north of Peru, we may not be successful in attracting and retaining the personnel we require. If we are unable to hire, train and retain qualified employees at a reasonable cost, we may be unable to successfully operate our business or reach full planned production levels in a timely manner and, as a result, our business, financial condition and results of operations could be adversely affected.

Our operations and sales are highly concentrated in the northern region of Peru.

All of our operations are located in the northern region of Peru, including our production facilities and the quarries from where we obtain limestone to produce cement. In addition, substantially all of our cement products are sold to consumers in this market. As a result, any adverse economic, political or social conditions affecting the northern region of Peru, as well as natural disasters and weather conditions, such as the El Niño climate pattern, among other factors that may affect this region, could have a material adverse effect on our business, financial condition and results of operations. During the first four months of 2017, the North of Peru experienced severe rain, landslides and flooding, which affected the demand for cement, and the ability to ship it, as well as the provision of raw materials since some roads were destroyed. Our plants did not suffer any significant damage that halted operations.

We are subject to environmental regulations and may be exposed to liability and political cost as a result of our handling of hazardous materials and potential costs for environmental compliance.

We are subject to various environmental protection and health and safety laws and regulations that regulate, among other things, the generation, storage, handling, use and transportation of hazardous materials; emissions and discharge of hazardous materials; and the health and safety of our employees. Pursuant to Peruvian law, in order to conduct mining and industrial activities, we are required, among other things, to (i) submit an environmental impact assessment to the Ministry of Production (*Ministerio de la Producción*) and a mining closure plan to the Ministry of Energy and Mines (*Ministerio de Energía y Minas*, or "MEM") prior to initiating mining activities, (ii) comply with certain air emission and wastewater discharge standards, (iii) obtain approval from the water management authority to discharge wastewater into natural water sources or soil, (iv) dispose solid waste generated by us in special landfills exclusively through companies registered with the environmental agency, and (v) store fuel in compliance with environmental and safety standards. In addition, we are required to have a health and safety committee and develop an internal health and safety code. Although we believe we are in compliance with all these regulations in all material respects, we cannot assure you that we have been or will be at all times in full compliance with these laws and regulations. Any violation of such laws or regulations could result in substantial fines, criminal sanctions, revocations of operating permits and shutdowns of our facilities. In addition, current or future governments may also impose stricter regulations which may require us to incur higher compliance costs.

Pursuant to certain applicable environmental laws, we could be found liable for all or substantially all of the damages caused by pollution at our current or former facilities or those of our predecessors or at disposal sites. We could also be found liable for all incidental damages due to the exposure of individuals to hazardous substances or other environmental damage.

We cannot assure you that our costs of complying with current and future environmental and health and safety laws and regulations, and any liabilities arising from past or future releases of, or exposure to, hazardous substances will not adversely affect our business, financial condition and results of operations.

International agreements related to climate change may result in an increase in our costs.

There are ongoing international efforts to address greenhouse emissions. The United Nations and certain international organizations have taken action against activities that may increase the atmospheric concentration of greenhouse gases. Regulatory measures, such as the Kyoto Protocol, aimed at addressing greenhouse gas emissions and climate changes, are in various stages of negotiation and implementation. Such measures may result in increased costs to us for installation of new controls aimed at reducing greenhouse gas emissions, purchase of credits or licenses for atmospheric emissions, and monitoring and registration of greenhouse gas emissions from our operations. These measures, if adopted in Peru, could adversely affect our business, financial condition and results of operations.

Changes in regulations or in the interpretation of regulations may adversely affect our business, financial condition and results of operations.

Our business is subject to extensive regulation in Peru, including, among others, relating to tax, environmental, labor, health and safety, and mining matters. We believe that our facilities are currently operating in all material respects in accordance with all applicable concessions, laws and regulations. Future regulatory changes, changes in the interpretation of such regulations or stricter enforcement of such regulations, including changes to our concession agreements, may increase our compliance costs and could potentially require us to alter our operations. We cannot assure you that regulatory changes in the future will not adversely affect our business, financial condition and results of operations.

A dispute with the labor unions that represent our employees could have an adverse effect on our business, financial condition and results of operations.

As of December 31, 2017, approximately 10.1% of our employees were members of employee unions. Our practice is to extend some of the benefits we offer our unionized employees to other employees. Although we consider our relations with our employees are currently positive, we cannot assure you that we will not experience work slowdowns, work stoppages, strikes or other labor disputes in the future, which could adversely affect our business, financial condition and results of operations.

New projects may require the prior approval of local indigenous communities.

On September 7, 2011, Peru enacted Law No. 29785, regarding the Prior Consultation Right of Local Indigenous Communities, in accordance with the International Labor Organization Convention No. 169 (*Ley del Derecho a la Consulta Previa a los Pueblos Indígenas y Originarios, Reconocido en el Convenio 169 de la Organización Internacional del Trabajo*). This law, which became effective on December 6, 2011, establishes a prior consultation procedure (*procedimiento de consulta previa*) that the Peruvian government must carry out with local indigenous communities, whose rights may be directly affected by new legislative or administrative measures, including the granting of new mining concessions. Local indigenous communities do not have a veto right; upon completion of this prior consultation procedure, the Peruvian government retains the discretion to approve or reject the applicable legislative or administrative measure. However, to the extent that in the future our new projects may require legislative or administrative measures that impact local indigenous communities, we may not be able to undertake such projects, unless the Peruvian government first conducts the foregoing consultation procedure. We cannot assure you that this law will not adversely affect our new projects and have an adverse effect on our business, financial condition and results of operations.

The indenture pursuant to which we issued our 4.50% Senior Notes due 2023 contains financial covenants, and any default under the indenture may have a material adverse effect on our financial condition and cash flows.

The indenture pursuant to which we issued our 4.50% Senior Notes due 2023 contains restrictions and covenants, including restrictions on our and our guarantor subsidiaries' ability to incur further indebtedness or issue disqualified stock and preferred stock, unless certain conditions are met. Failure to meet or satisfy any of these covenants could result in an event of default under the indenture.

Risks Relating to our Common Shares and ADSs

The market price of our ADSs may fluctuate significantly, and you could lose all or part of your investment.

Volatility in the market price of our ADSs may prevent you from being able to sell your ADSs at or above the price you paid for them. The market price and liquidity of the market for our ADSs may be significantly affected by numerous factors, some of which are beyond our control and may not be directly related to our operating performance. These factors include, among others:

- actual or anticipated changes in our results of operations, or failure to meet expectations of financial market analysts and investors;
- investor perceptions of our prospects or our industry;
- operating performance of companies comparable to us and increased competition in our industry;
- new laws or regulations or new interpretations of laws and regulations applicable to our business;
- general economic trends in Peru;

- catastrophic events, such as earthquakes and other natural disasters; and
- developments and perceptions of risks in Peru and in other countries.

Our controlling shareholder has significant influence over us and his interests could conflict with the interests of other shareholders.

As of March 31, 2018, our controlling shareholder beneficially owned 50.01% of our outstanding common shares. As a result, our controlling shareholder has the ability to determine the outcome of substantially all matters submitted for a vote to our shareholders and thus exercise control over our business policies and affairs, including, among others, the following:

- the composition of our board of directors and, consequently, any determinations of our board with respect to our business direction and policy, including the appointment and removal of our executive officers;
- determinations with respect to mergers, other business combinations and other transactions, including those that may result in a change of control;
- whether dividends are paid or other distributions are made and the amount of any such dividends or distributions;
- whether we offer preemptive and accretion rights to holders of our common shares in the event of a capital increase;
- sales and dispositions of our assets; and
- the amount of debt financing we incur.

Our controlling shareholder may direct us to take actions that could be contrary to the interests of our other shareholders and may be able to prevent other shareholders from blocking these actions or from causing different actions to be taken. Also, our controlling shareholder may prevent change of control transactions that might otherwise provide the shareholders with an opportunity to dispose of or realize a premium on their investment in our common shares and ADSs. We cannot assure you that our controlling shareholder will act in a manner consistent with our other shareholders' best interests.

Holders of ADSs may be unable to exercise voting rights with respect to our common shares underlying the ADSs at our shareholders' meetings.

Holders of ADSs may exercise voting rights with respect to the common shares represented by the ADSs only in accordance with the deposit agreement relating to the ADSs. Holders of our common shares will receive notice of shareholders' meetings through publication of a notice 25 days in advance, pursuant to Peruvian law, in the official gazette in Peru, a Peruvian newspaper of general circulation, the bulletin of the Lima Stock Exchange and the website of the *Superintendencia del Mercado de Valores* (the "Peruvian Securities Commission"), and will be able to exercise their voting rights by either attending the meeting in person or voting by proxy. ADS holders will not receive notice directly from us. Instead, pursuant to the deposit agreement, we will notify the depository, which will mail to holders of ADSs the notice of the meeting and a statement as to the manner in which voting instructions may be given. To exercise their voting rights, ADS holders must instruct the depository how to exercise the voting rights for the common shares which underlie their ADSs. Due to these additional procedural steps involving the depository, the process for exercising voting rights may take longer for ADS holders than for holders of our common shares.

Holders of ADSs also may not receive voting materials in time to instruct the depository to vote the common shares underlying their ADSs. In addition, the depository and its agents are not responsible for failing to carry out voting instructions of the holders of ADS or for the manner of carrying out such instructions, unless such failure can be attributed to gross negligence, bad faith or willful misconduct on the part of the depository or its agents. Accordingly, holders of ADSs may not be able to exercise voting rights, and they will have little, if any, recourse if the underlying common shares are not voted as requested.

Our shareholders' ability to receive cash dividends may be limited.

Our shareholders' ability to receive cash dividends may be limited by the ability of the depository to convert cash dividends paid in soles into U.S. dollars. Under the terms of our deposit agreement with the depository for the ADSs, the depository will convert any cash dividend or other cash distribution we pay on the common shares underlying the ADSs into U.S. dollars, if it can do so on a reasonable basis and can transfer the U.S. dollars to the United States. If this conversion is not possible or if any government approval is needed and cannot be obtained, the deposit agreement allows the depository to distribute the foreign currency only to those ADS holders to whom it is possible to do so. If the exchange rate fluctuates significantly during a time when the depository cannot convert the foreign currency, holders of ADSs may lose some or all of the value of the dividend distribution.

Holders of ADSs may be unable to exercise pre-emptive or accretion rights with respect to the common shares underlying their ADSs.

Under Peruvian corporate law, if we issue new common shares as part of a capital increase, unless otherwise agreed to by holders of 40% of our outstanding common shares, our shareholders will generally have the right to subscribe to a proportional number of common shares of the class held by them to maintain their existing ownership percentage, which is known as preemptive rights. In addition, shareholders are entitled to the right to subscribe for the unsubscribed common shares of either the class held by them or other classes which remain unsubscribed at the end of a preemptive rights offering, on a pro rata basis, which is known as accretion rights. Holders of ADSs may not be able to exercise the preemptive or accretion rights relating to common shares underlying the ADSs unless a registration statement under the U.S. Securities Act of 1933, as amended (the "Securities Act"), is effective with respect to those rights or an exemption from the registration requirements of the Securities Act is available. We are not obligated to file a registration statement with respect to the common shares relating to these preemptive and accretion rights and we cannot assure you that we will file any such registration statement. Unless we file a registration statement or an exemption from registration is available, holders of ADSs may receive only the net proceeds from the sale of their preemptive and accretion rights by the depository or, if the preemptive and accretion rights cannot be sold, they will be allowed to lapse. As a result, U.S. holders of our ADSs may suffer dilution of their interest in our company upon future capital increases.

We are entitled to amend the deposit agreement under which our ADSs were issued, and to change the rights of ADS holders under the terms of such agreement, without the prior consent of the ADS holders.

We are entitled to amend the deposit agreement and to change the rights of the ADS holders under the terms of such agreement, without the prior consent of the ADS holders. Any change related to an increase in deposits or charges for book-entry securities services or any modification that might hinder the rights of the ADS holders will be effective within 30 days after the ADS holders have received notice of such change or modification and such holders will have no right to any compensation whatsoever.

Our status as a foreign private issuer allows us to follow alternate standards to the corporate governance standards of the New York Stock Exchange, which may limit the protections afforded to investors.

We are a “foreign private issuer” within the meaning of the New York Stock Exchange corporate governance standards. Under New York Stock Exchange rules, a foreign private issuer may elect to comply with the practices of its home country and not to comply with certain corporate governance requirements applicable to U.S. companies with securities listed on the exchange. We currently follow certain Peruvian practices concerning corporate governance and intend to continue to do so. Accordingly, holders of our ADSs will not have the same protections afforded to shareholders of companies that are subject to all New York Stock Exchange corporate governance requirements.

For example, the New York Stock Exchange listing standards provide that the board of directors of a U.S. listed company must have a majority of independent directors at the time the company ceases to be a “controlled company.” Under Peruvian corporate governance practices, a Peruvian company is not required to have a majority of independent members on its board of directors.

The listing standards for the New York Stock Exchange also require that U.S. listed companies; at the time they cease to be “controlled companies,” have a nominating/corporate governance committee and a compensation committee (in addition to an audit committee). Each of these committees must consist solely of independent directors and must have a written charter that addresses certain matters specified in the listing standards. Under Peruvian law, a Peruvian company may, but is not required to, form special governance committees, which may be composed partially or entirely of non-independent directors.

In addition, New York Stock Exchange rules require the independent non-executive directors of U.S. listed companies to meet on a regular basis without management being present. There is no similar requirement under Peruvian law.

The New York Stock Exchange’s listing standards also require U.S. listed companies to adopt and disclose corporate governance guidelines. In November 2013, the Peruvian Securities Commission and a committee comprised of regulatory agencies and associations prepared and published a list of suggested non-mandatory corporate governance guidelines called the “Good Corporate Governance Code for Peruvian Companies.” Although we have implemented a number of these measures, we are not required to comply with the corporate governance guidelines by law or regulation, only to disclose whether or not we are in compliance.

Minority shareholders in Peru are not afforded equivalent protections as minority shareholders in other jurisdictions and investors may face difficulties in commencing judicial and arbitration proceedings against our company or the controlling shareholder.

Our company is organized and existing under the laws of Peru, and our controlling shareholder is resident in Peru. Accordingly, investors may face difficulties in serving process on our company, our officers and directors or the controlling shareholder in other jurisdictions, and in enforcing decisions granted by courts located in other jurisdictions against our company, our officers and directors or the controlling shareholder that are based on securities laws of jurisdictions other than Peru.

In Peru, there are no proceedings to file class action suits or shareholder derivative actions with respect to issues arising between minority shareholders and an issuer, its controlling shareholders or directors and officers. Furthermore, the procedural requirements to file actions by shareholders differ from those of other jurisdictions, such as in the United States. As a result, it may be more difficult for our minority shareholders to enforce their rights against us, our directors, officers or controlling shareholder as compared to the shareholders of a U.S. company. The deposit agreement provides that the depositary has no obligation to commence or become involved in any judicial proceedings and any other legal actions relating to the ADSs or the deposit agreement, either on behalf of the ADS holders or on behalf of any other person.
