Exchange rates

Our functional currency is the Indian rupee. We generate a major portion of our revenues in foreign currencies, particularly the U.S. dollar, the United Kingdom Pound Sterling, Euro and the Australian dollar, whereas we incur a majority of our expenses in Indian rupees. The exchange rate between the rupee and the U.S. dollar has changed substantially in recent years and may fluctuate substantially in the future. Consequently, the results of our operations are adversely affected as the rupee appreciates against the U.S. dollar. For fiscal 2009 and 2008, U.S. dollar denominated revenues represented 71.1% and 69.5% of total revenues. For the same periods, revenues denominated in United Kingdom Pound Sterling represented 12.7% and 14.9% of total revenues, revenues denominated in the Euro represented 7.1% and 5.7% of total revenues while revenues denominated in the Australian dollar represented 4.6% and 4.8% of total revenues. As such, our exchange rate risk primarily arises from our foreign currency revenues, receivables and payables.

Fluctuations in the exchange rate between the Indian rupee and the U.S. dollar will also affect the U.S. dollar equivalent of the Indian rupee price of our equity shares on the Indian stock exchanges and, as a result, will likely affect the market price of our ADSs, and vice versa. Such fluctuations also impact the U.S. dollar conversion by the Depositary of any cash dividends paid in Indian rupees on our equity shares represented by the ADSs.

The following table sets forth, for the fiscal years indicated, information concerning the number of Indian rupees for which one U.S. dollar could be exchanged based on the fixing rate in the City of Mumbai on business days during the period for cable transfers in Indian rupees as published by the Foreign Exchange Dealers' Association of India, or FEDAI. The column titled 'Average' in the table below is the average of the last business day of each month during the year.

Fiscal	Period End	Average	High	Low
	Rs.	Rs.	Rs.	Rs.
2009	50.72	46.54	52.00	39.88
2008	40.02	40.00	43.05	38.48

The following table sets forth the high and low exchange rates for the previous six months and is based on the fixing rate in the City of Mumbai on business days during the period for cable transfers in Indian rupees as published by the FEDAI.

Month	High	Low
March 2009	Rs. 52.00	Rs. 50.09
February 2009	50.61	48.57
January 2009	49.26	48.31
December 2008	50.53	47.04
November 2008	50.32	46.89
October 2008	49.97	46.90

On April 28, 2009, the fixing rate in the City of Mumbai for cash transfers in Indian rupees as published by FEDAI was Rs. 50.38.

The exchange rates for month-end and period-end reporting purposes have been based on the FEDAI rates. Infosys believes that exchange rates published by FEDAI are more representative of market exchange rates than exchange rates published by individual banks. However, FEDAI does not publish exchange rates on a daily basis, and in the absence of availability of daily exchange rates from FEDAI, Infosys utilizes exchange rates from Deutsche Bank, Mumbai, for daily transactions in the ordinary course of business.

Risk Factors

This Annual Report on Form 20-F contains forward-looking statements that involve risks and uncertainties. Our actual results could differ materially from those anticipated in these forward-looking statements as a result of certain factors, including those set forth in the following risk factors and elsewhere in this Annual Report on Form 20-F.

Risks Related to Our Company and Our Industry

Our revenues and expenses are difficult to predict and can vary significantly from period to period, which could cause our share price to decline.

Our revenues and profitability have grown rapidly in recent years and are likely to vary significantly in the future from period to period. Therefore, we believe that period-to-period comparisons of our results of operations are not necessarily meaningful and should not be relied upon as an indication of our future performance. It is possible that in the future some of our results of operations may be below the expectations of market analysts and our investors, which could cause the share price of our equity shares and our ADSs to decline significantly.

Factors which affect the fluctuation of our operating results include:

- the size, timing and profitability of significant projects, including large outsourcing deals;
- changes in our pricing policies or the pricing policies of our competitors;
- economic fluctuations that affect the strength of the economy of the United States, Europe or any of the other markets in which we operate;
- foreign currency fluctuations and our hedging activities that are intended to address such fluctuations;

- the proportion of services that we perform at our development centers or at our client sites;
- the effect of wage pressures, seasonal hiring patterns, attrition, and the time required to train and productively utilize new employees, particularly information technology, or IT professionals;
- utilization of billable employees;
- the size and timing of facilities expansion and resulting depreciation and amortization costs;
- varying expenditures and lead times in connection with responding to, and submission of proposals for large client engagements including on account of changing due diligence requirements;
- unanticipated cancellations, contract terminations, deferrals of projects or delays in purchases, including those resulting from our clients reorganizing their operations, mergers or acquisitions involving our clients and changes in management;
- unanticipated cancellations, contract terminations, deferrals of projects or delays in purchases resulting from our clients' efforts to comply with regulatory requirements;
- the proportion of our customer contracts that are on a fixed-price, fixed-timeframe basis compared with time and material contracts; and
- unanticipated variations in the duration, size and scope of our projects, as well as in the corporate decision-making process of our client base.

A significant part of our total operating expenses, particularly expenses related to personnel and facilities, are fixed in advance of any particular period. As a result, unanticipated variations in the number and timing of our projects or employee utilization rates, or the accuracy of our estimates of the resources required to complete ongoing projects, may cause significant variations in our operating results in any particular period.

There are also a number of factors, other than our performance, that are not within our control that could cause fluctuations in our operating results from period to period. These include:

- the duration of tax holidays or tax exemptions and the availability of other incentives from the Government of India;
- changes in regulations and taxation in India or the other countries in which we conduct business;
- currency fluctuations, particularly when the rupee appreciates in value against the US dollar, the United Kingdom Pound Sterling or the Euro, since the majority of our revenues are in these currencies and a significant part of our costs are in rupees; and
- other general economic and political factors, including, the economic conditions in the United States, Europe or any other geographies in which we operate.

In addition, the availability of visas for working in the United States may vary substantially from quarter to quarter. Visas for working in the United States may be available during one quarter, but not another, or there may be differences in the number of visas available from one quarter to another. As such, the variable availability of visas may require us to incur significantly higher visa-related expenses in certain quarters when compared to others. For example, we incurred \$15 million in costs for visas in the three months ended June 30, 2008, compared to \$4 million in the three months ended March 31, 2009. Such fluctuations may affect our operating margins and profitability in certain quarters during a fiscal year.

We may not be able to sustain our previous profit margins or levels of profitability.

Our profitability could be affected by pricing pressures on our services, volatility of the exchange rates between the rupee, the dollar and other currencies in which we generate revenues or incur expenses, and increased wage pressures in India and at other locations where we maintain operations.

Since fiscal 2003, we have incurred substantially higher selling and marketing expenses as we have invested to increase brand awareness among target clients and promote client loyalty and repeat business among existing clients. We may incur increased selling and marketing expenses in the future, which could result in declining profitability. In addition, while our Global Delivery Model allows us to manage costs efficiently, as the proportion of our services delivered at client sites increases, we may not be able to keep our operating costs as low in the future, which would also have an adverse impact on our profit margins.

The appreciation of the rupee against the U.S. dollar adversely impacted our revenues and operating results for fiscal 2007 and 2008. During the past fiscal year, the U.S. dollar appreciated substantially relative to the rupee. The exchange rate for one dollar as published by the Foreign Exchange Dealers' Association of India was Rs. 50.72 as of March 31, 2009, as against Rs. 40.02 as of March 31, 2008. Although the dollar has appreciated against the rupee during fiscal 2009, we still experienced losses during such period related to foreign currency fluctuations as a result of our hedging activities.

Increased selling and marketing expenses, and other operating expenses in the future, as well as fluctuations in foreign currency exchange rates including, in particular, the appreciation of the rupee against foreign currencies or the appreciation of the dollar against other foreign currencies, could materially and adversely affect our profit margins and results of operations in future periods.

The economic environment, pricing pressure and decreased utilization rates could negatively impact our revenues and operating results.

Spending on technology products and services in most parts of the world has been rising for the past few years. However, there was a decline in the growth rate of global IT purchases in the latter half of 2008 due to the global economic slowdown. This downward trend is expected to continue into 2009 with global IT purchases expected to decline due to the challenging global economic environment. For example, in January 2009, the Forrester Global IT Market Outlook: 2009 by Andrew H. Bartels forecast that purchases of IT goods and services by global businesses and governments would decline by 3% in 2009 as compared to an increase of 8% in 2008, largely due to the economic recessions in many countries, as well as currency fluctuations, including as a result of the expected strengthening of the U.S. dollar against the Euro and other currencies. The reduction in IT spending on account of the global economic slowdown has negatively impacted our revenues for fiscal 2009 and this slowdown, or any further diminution in IT spending, may continue to adversely impact our business and results of operations in future periods.

Reduced IT spending in response to the challenging economic environment has also led to increased pricing pressure from our clients, which has adversely impacted our billing rates. For instance, our billing rates for technology professionals have declined sequentially by 2.1% and 1.8% in constant currency terms for the quarters ended March 31, 2009 and December 31, 2008, respectively. In addition to seeking reduced billing rates, many of our clients have also been seeking extensions in credit terms from the standard terms that we provide, including pursuing credit from us for periods of up to 60 days or more. Such extended credit terms may reduce our revenues, or result in the delay of the realization of revenues, and may adversely affect our cash flows. Additionally, extended credit terms also increase our exposure to customer-specific credit risks. Reductions in IT spending and extended credit terms arising from or related to the global economic slowdown, and any resulting pricing pressures, reduction in billing rates or increased credit risk may adversely impact our revenues, gross profits, operating margins and results of operations.

Further, reduced or delayed IT spending has also adversely impacted our utilization rates for technology professionals. For instance, for the quarter ended March 31, 2009, our utilization rate for technology professionals, including trainees, was approximately 66.9%, as compared to 70.2% during the quarter ended March 31, 2008. This decrease in employee utilization rates has adversely affected our profitability for fiscal 2009, and any further decrease in employee utilization rates in the future, whether on account of reduced or delayed IT spending, particularly if accompanied by pricing pressure, may adversely impact our profits.

In addition to the business challenges and margin pressure resulting from the global economic slowdown and the response of our clients to such slowdown, there is also a growing trend among consumers of IT services towards consolidation of technology service providers in order to improve efficiency and reduce costs. Our success in the competitive bidding process for new consolidation projects or in retaining existing projects is dependent on our ability to fulfil client expectations relating to staffing, efficient offshoring of services, absorption of transition costs, deferment of billing and more stringent service levels. Our failure to meet a client's expectations in such consolidation projects may adversely impact our business, revenues and operating margins. In addition, even if we are successful in winning the mandates for such consolidation projects, we may experience significant pressure on our operating margins as a result of the competitive bidding process.

Moreover, our ability to maintain or increase pricing is restricted as clients often expect that as we do more business with them, they will receive volume discounts or special pricing incentives. In addition, existing and new customers are also increasingly using third-party consultants with broad market knowledge to assist them in negotiating contractual terms. Any inability to maintain or increase pricing on this account may also adversely impact our revenues, gross profits, operating margins and results of operations.

Our revenues are highly dependent on clients primarily located in the United States and Europe, as well as on clients concentrated in certain industries, and economic recession or factors that affect the economic health of the United States, Europe or these industries

may affect our business.

In fiscal 2009 and fiscal 2008, approximately 63.2% and 62.0% of our revenues were derived from projects in the North America. In the same periods, approximately 26.4% and 28.1% of our revenues were derived from projects in Europe. The recent crisis in the financial and credit markets in the United States, Europe and Asia has led to a global economic slowdown, with the economies of the United States and Europe showing significant signs of weakness. In March 2009, the Forrester U.S. *IT Market Outlook: Q1 2009* by Andrew H. Bartels indicated that U.S. business and government purchases of IT goods and services would decrease by 3.1% in 2009 as against a projected growth rate of 6.1% forecast for the same period in the Forrester U.S. *IT Market Outlook: Q3 2008* by Andrew H. Bartels published in September 2008. If the United States or European economy weakens further, our clients may reduce or postpone their technology spending significantly, which may in turn lower the demand for our services and negatively affect our revenues and profitability. In fiscal 2009 and fiscal 2008, we derived approximately 33.9% and 35.8% of our revenues from the financial services industry. The crisis in the financial and credit markets in the United States has led to a significant change in the financial services industry in the United States in the past year, with the United States federal government being forced to take over or provide financial support to leading financial institutions and with leading investment banks going bankrupt or being forced to sell themselves in distressed circumstances. The subprime mortgage crisis and the resultant turbulence in the financial services sector may result in the reduction, postponement or consolidation of IT spending by our clients, contract terminations, deferrals of projects or delays in purchases, especially in the financial services sector. Any reduction, postponement or consolidation in IT spending may lower the demand for our services or impact the prices that we can obtain for our services and consequently, adversely affect our revenues and profitability.

Further, the United States economy is currently experiencing a recession, accompanied by a significant reduction in consumer spending. The subprime mortgage crisis and recession in the United States economy could have a material adverse impact on our revenues, particularly from businesses in the financial services industry and other industries that are particularly vulnerable to a slowdown in consumer spending. In fiscal 2009 and fiscal 2008, we derived approximately 33.9% and 35.8% of our revenues from clients in the financial services industry, 18.1% and 21.6% of our revenues from clients in the telecommunications industry and about 12.5% and 11.8% of our revenues from clients in the retail industry, which industries are especially vulnerable to a slowdown in the U.S. economy. Any slowdown in the U.S. economy or in the industry segments from which we generate revenues could have a negative effect on our business and results of operations.

Currency fluctuations may affect the results or our operations or the value of our ADSs.

Our functional currency is the Indian rupee although we transact a major portion of our business in several currencies and accordingly face foreign currency exposure through our sales in the United States and elsewhere, and purchases from overseas suppliers in various foreign currencies. Generally, we generate the majority of our revenues in foreign currencies, such as the U.S. dollar or the United Kingdom Pound Sterling, and incur the majority of our expenses in Indian rupees. Recently, as a result of the global economic slowdown and the increased volatility in foreign exchange currency markets, there has been increased demand from our clients that all risks associated with foreign exchange fluctuations be borne by us. Also, historically, we have held a substantial majority of our cash funds in rupees. Accordingly, changes in exchange rates may have a material adverse effect on our revenues, other income, cost of services sold, gross margin and net income, and may have a negative impact on our business, operating results and financial condition. The exchange rate between the rupee and foreign currencies, including the U.S. dollar, the United Kingdom Pound Sterling, the Euro and the Australian Dollar, has changed substantially in recent years and may fluctuate substantially in the future, and the weakness of the dollar had a material and adverse effect on our operating results in fiscal 2009 and 2008. We expect that a majority of our revenues will continue to be generated in foreign currencies, including the U.S. dollar, the United Kingdom Pound Sterling, the Euro and the Australian Dollar, for the foreseeable future and that a significant portion of our expenses, including personnel costs, as well as capital and operating expenditures, will continue to be denominated in Indian rupees. Consequently, the results of our operations are adversely affected as the rupee appreciates against the dollar and other foreign currencies.

We use derivative financial instruments such as foreign exchange forward and option contracts to mitigate the risk of changes in foreign exchange rates on accounts receivable and forecast cash flows denominated in certain foreign currencies. As of March 31, 2009, we had outstanding forward contracts of \$278 million, Euro 27 million and United Kingdom Pound Sterling 21 million and option contracts of \$173 million. As of March 31, 2008, we had outstanding forward contracts of \$586 million, Euro 15 million and United Kingdom Pound Sterling 3 million and option contracts of \$100 million and United Kingdom Pound Sterling 8 million and Euro 17 million. We may not purchase derivative instruments adequate to insulate ourselves from foreign currency exchange risks, and over the past year, we have incurred significant losses as a result of exchange rate fluctuations that have not been offset in full by our hedging strategy.

Additionally, our hedging activities have also contributed to increased losses in recent times given the recent volatility in foreign currency markets. For example, in fiscal 2009, we incurred losses of \$165 million on our forward and options contracts. These losses offset by gains of \$71 million as a result of foreign exchange translations during the same period, resulted in a total loss of \$94 million related to foreign currency transactions, which had a significant and adverse effect on our profit margin and results of operations. If foreign exchange currency markets continue to be volatile, such fluctuations in foreign currency exchange rates could materially and adversely affect our profit margins and results of operations in future periods. Also, the volatility in the foreign currency markets may make it difficult to hedge our foreign currency exposures effectively.

Further, the policies of the Reserve Bank of India may change from time to time which may limit our ability to hedge our foreign currency exposures adequately. In addition, a high-level committee appointed by the Reserve Bank of India had recommended that India move to increased capital account convertibility over the next few years, and proposed a framework for such increased convertibility. Full or increased capital account convertibility, if introduced, could result in increased volatility in the fluctuations of exchange rates between the rupee and foreign currencies.

During fiscal 2009, we derived 28.9% of our revenues in currencies other than the U.S. dollar including 12.7%, 7.1% and 4.6% of our revenues in United Kingdom Pound Sterling, Euro and Australian dollars, respectively. During fiscal 2009, a majority of the currencies have depreciated significantly against the U.S. dollar, with the United Kingdom Pound Sterling, Euro and Australian Dollar depreciating by 15.9%, 1.4% and 11.4% respectively, on an average, when compared to fiscal 2008. These cross currency fluctuations adversely impacted our reported revenues for fiscal 2009, and may adversely impact our reported revenues in future periods.

Fluctuations in the exchange rate between the rupee and the U.S. dollar will also affect the dollar conversion by Deutsche Bank Trust Company Americas, the Depositary with respect to our ADSs, of any cash dividends paid in rupees on the equity shares represented by the ADSs. In addition, these fluctuations will affect the dollar equivalent of the rupee price of equity shares on the Indian stock exchanges and, as a result, the prices of our ADSs in the United States, as well as the dollar value of the proceeds a holder would receive upon the sale in India of any equity shares withdrawn from the Depositary under the Depositary Agreement. Holders may not be able to convert rupee proceeds into dollars or any other currency, and there is no guarantee of the rate at which any such conversion will occur, if at all.

Any inability to manage our growth could disrupt our business and reduce our profitability.

We have grown significantly in recent periods. Between March 31, 2005 and March 31, 2009 our total employees grew from approximately 36,800 to approximately 104,900. In addition, in the last five years we have undertaken and continue to undertake major expansions of our existing facilities, as well as the construction of new facilities. We expect our growth to place significant demands on our management and other resources. Our growth will require us to continuously develop and improve our operational, financial and other internal controls, both in India and elsewhere. In addition, continued growth increases the challenges involved in:

- recruiting, training and retaining sufficient skilled technical, marketing and management personnel;
- adhering to and further improving our high quality and process execution standards;
- preserving our culture, values and entrepreneurial environment;
- successfully expanding the range of services offered to our clients;
- developing and improving our internal administrative infrastructure, particularly our financial, operational, communications and other internal systems; and
- maintaining high levels of client satisfaction.

Our growth strategy also relies on the expansion of our operations to other parts of the world, including Europe, Australia and other parts of Asia. In October 2003, we established Infosys China and in January 2004, we acquired Infosys Australia to expand our operations in those countries. In April 2004, we formed Infosys Consulting to focus on consulting services in the United States. In addition, we have embarked on an expansion of our business in China, and have expended significant resources in this expansion. During fiscal 2008, we established a wholly owned subsidiary and opened a development center in Mexico. Also, during fiscal 2008, as part of an

outsourcing agreement with a client, Philips Electronics Nederland B.V. ("Philips"), our majority owned subsidiary, Infosys BPO, acquired from Koninklijke Philips Electronics N.V. certain shared services centers in India, Poland and Thailand that were engaged in the provision of finance, accounting and procurement support services to Philips' operations worldwide. The costs involved in entering and establishing ourselves in new markets, and expanding such operations, may be higher than expected and we may face significant competition in these regions. Our inability to manage our expansion and related growth in these regions may have an adverse effect on our business, results of operations and financial condition.

We may face difficulties in providing end-to-end business solutions for our clients, which could lead to clients discontinuing their work with us, which in turn could harm our business.

Over the past several years, we have been expanding the nature and scope of our engagements by extending the breadth of services that we offer. The success of some of our newer service offerings, such as operations and business process consulting, IT consulting, business process management, systems integration and infrastructure management, depends in part, upon continued demand for such services by our existing and new clients and our ability to meet this demand in a cost-competitive and effective manner. Furthermore, our IT consulting business is not yet profitable, and its success in the future will depend on a number of factors. We cannot assure you that this business will become profitable in the future. In addition, our ability to effectively offer a wider breadth of end-to-end business solutions depends on our ability to attract existing or new clients to these service offerings. To obtain engagements for our end-to-end solutions, we are competing with large, well-established international consulting firms as well as other India-based technology services companies, resulting in increased competition and marketing costs. Accordingly, our new service offerings may not effectively meet client needs and we may be unable to attract existing and new clients to these service offerings.

The increased breadth of our service offerings may result in larger and more complex client projects. This will require us to establish closer relationships with our clients and potentially with other technology service providers and vendors, and require a more thorough understanding of our clients' operations. Our ability to establish these relationships will depend on a number of factors including the proficiency of our technology professionals and our management personnel.

Larger projects often involve multiple components, engagements or stages, and a client may choose not to retain us for additional stages or may cancel or delay additional planned engagements. These terminations, cancellations or delays may result from the business or financial condition of our clients or the economy generally, as opposed to factors related to the quality of our services. Cancellations or delays make it difficult to plan for project resource requirements, and resource planning inaccuracies may have a negative impact on our profitability.

Intense competition in the market for technology services could affect our cost advantages, which could reduce our share of business from clients and decrease our revenues.

The technology services market is highly competitive. Our competitors include large consulting firms, captive divisions of large multinational technology firms, infrastructure management services firms, Indian technology services firms, software companies and in-house IT departments of large corporations.

The technology services industry is experiencing rapid changes that are affecting the competitive landscape, including recent divestitures and acquisitions that have resulted in consolidation within the industry. These changes may result in larger competitors with significant resources. In addition, some of our competitors have added or announced plans to add cost-competitive offshore capabilities to their service offerings. These competitors may be able to offer their services using the offshore and onsite model more efficiently than we can. Many of these competitors are also substantially larger than us and have significant experience with international operations. We may face competition in countries where we currently operate, as well as in countries in which we expect to expand our operations. We also expect additional competition from technology services firms with current operations in other countries, such as China and the Philippines. Many of our competitors have significantly greater financial, technical and marketing resources, generate greater revenues, have more extensive existing client relationships and technology partners and have greater brand recognition than we do. We may be unable to compete successfully against these competitors, or may lose clients to these competitors. Additionally, we believe that our ability to compete also depends in part on factors outside our control, such as the price at which our competitors offer comparable services, and the extent of our competitors' responsiveness to their clients' needs.

Our revenues are highly dependent upon a small number of clients, and the loss of any one of our major clients could significantly impact our business.

We have historically earned, and believe that in the future we will continue to earn, a significant portion of our revenues from a limited number of corporate clients. In fiscal 2009 and fiscal 2008, our largest client accounted for 6.9% and 9.1% of our total revenues, and our five largest clients together accounted for 18.0% and 20.9% of our total revenues. The volume of work we perform for specific clients is likely to vary from year to year, particularly since we historically have not been the exclusive external technology services provider for our clients. Thus, a major client in one year may not provide the same level of revenues in a subsequent year. However, in any given year, a limited number of clients tend to contribute a significant portion of our revenues. There are a number of factors, other than our performance, that could cause the loss of a client and that may not be predictable. In certain cases, we have significantly reduced the services provided to a client when the client either changed its outsourcing strategy by moving more work in-house or replaced its existing software with packaged software supported by the licensor. Reduced technology spending in response to a challenging economic or competitive environment may also result in our loss of a client. If we lose one of our major clients or one of our major clients significantly reduces its volume of business with us or there is an increase in the accounts receivables from any of our major clients, our revenues and profitability could be reduced. As of March 31, 2009, one of our major clients accounted for over 10% of our total account receivables as of such date, and any inability to recover all or part of these receivables could reduce our profitability.

Legislation in certain countries in which we operate, including the United States and the United Kingdom, may restrict companies in those countries from outsourcing work to us.

Recently, some countries and organizations have expressed concerns about a perceived association between offshore outsourcing and the loss of jobs. With the growth of offshore outsourcing receiving increasing political and media attention, especially in the United States, which is our largest market, and particularly given the prevailing economic environment, it is possible that there could be a change in the existing laws or the enactment of new legislation restricting offshore outsourcing or imposing restrictions on the deployment of work visa holders at client locations, which may adversely impact our ability to do business in the jurisdictions in which we operate, especially with governmental entities. It is also possible that private sector companies working with these governmental entities may be restricted from outsourcing projects related to government contracts or may face disincentives if they outsource certain operations.

The recent credit crisis in the United States and elsewhere has also resulted in the United States federal government and governments in Europe acquiring or proposing to acquire equity positions in leading financial institutions and banks. If either the United States federal government or another governmental entity acquires an equity position in any of our clients, any resulting changes in management or reorganizations may result in deferrals or cancellations of projects or delays in purchase decisions, which may have a material adverse effect on our business, results of operations or financial condition. Moreover, equity investments by governmental entities in, or governmental financial aid to, our clients may involve restrictions on the ability of such clients to outsource offshore or otherwise restrict offshore IT vendors from utilizing the services of work visa-holders at client locations. Any restriction on our ability to deploy our trained offshore resources at client locations may in turn require us to replace our existing offshore resources with local resources, or hire additional local resources, which local resources may only be available at higher wages. Any resulting increase in our compensation, hiring and training expenses could adversely impact our revenues and operating profitability.

In addition, in the United Kingdom, the Transfer of Undertakings (Protection of Employees) Regulations, or TUPE, including the revisions to those regulations, will allow employees who are dismissed as a result of "service provision changes", which may include outsourcing to non-UK companies, to seek compensation either from the company from which they were dismissed or from the company to which the work was transferred. This could deter UK companies from outsourcing work to us and could also result in our being held liable for redundancy payments to such workers. Any such event could adversely affect our revenues and operating profitability.

Our success depends largely upon our highly skilled technology professionals and our ability to hire, attract and retain these personnel.

Our ability to execute projects, to maintain our client relationships and to obtain new clients depends largely on our ability to attract, train, motivate and retain highly skilled technology professionals, particularly project managers and other mid-level

professionals. If we cannot hire and retain additional qualified personnel, our ability to bid for and obtain new projects, and to continue to expand our business will be impaired and our revenues could decline. We believe that there is significant worldwide competition for technology professionals with the skills necessary to perform the services we offer. For example, in India, since 2004, hiring by technology companies has increased significantly. Excluding Infosys BPO and our other subsidiaries, we added approximately 12,400, 13,700 and 15,200, new employees, net of attrition, in fiscal 2009, fiscal 2008 and fiscal 2007.

Increased hiring by technology companies, particularly in India, and increasing worldwide competition for skilled technology professionals may lead to a shortage in the availability of qualified personnel in the markets in which we operate and hire. A shortage in the availability of qualified IT professionals in the markets in which we operate may affect our ability to hire an adequate number of skilled and experienced technology professionals. Our inability to hire such professionals may have an adverse effect on our business, results of operations and financial condition.

Changes in policies or laws may also affect the ability of technology companies to hire, attract and retain personnel. For instance, the Finance Act, 2007 imposes a fringe benefit tax, or FBT, on companies with respect to specified securities or equity shares allotted or transferred, directly or indirectly, by the company free of cost or at a concessional rate to its employees. The imposition of FBT may discourage technology companies in India from granting stock options to its employees. Although the Government of India has clarified that FBT imposed on a company may be passed on to its employees, any passing on of FBT by a company to its employees may reduce the effectiveness of stock option grants in attracting and retaining employees. Any passing on of FBT by us to our employees may affect our ability to hire skilled and experienced technology professionals.

Increased demand for technology professionals has also led to an increase in attrition rates. For instance, our comparable attrition rate for fiscal 2008 and fiscal 2007 was 13.4% and 13.7%, without accounting for attrition in Infosys BPO or our other subsidiaries. Although our attrition rate for fiscal 2009 has reduced, it remains high at 11.1%, without accounting for attrition in Infosys BPO or our other subsidiaries. Furthermore, attrition in the business process management industry is generally significantly higher than in the technology services industry. We may not be able to hire and retain enough skilled and experienced technology professionals to replace those who leave. Additionally, we may not be able to redeploy and retrain our technology professionals to keep pace with continuing changes in technology, evolving standards and changing client preferences. Our inability to attract and retain technology professionals may have a material adverse effect on our business, results of operations and financial condition.

It is possible that the Central Government or State Governments in India may introduce legislation requiring employers to give preferential hiring treatment to under-represented groups. The quality of our work force is critical to our business. If any such Central Government or State Government legislation becomes effective, our ability to hire the most highly qualified technology professionals may be hindered.

Our success depends in large part upon our management team and key personnel and our ability to attract and retain them.

We are highly dependent on the senior members of our management team, including the continued efforts of our Chairman, our Chief Executive Officer, our Chief Operating Officer, our Chief Financial Officer, other executive members of the Board and members of our executive council which consists of certain executive and other officers. Our future performance will be affected by any disruptions in the continued service of our executives and other officers. Competition for senior management in our industry is intense, and we may not be able to retain such senior management personnel or attract and retain new senior management personnel in the future. Furthermore, we do not maintain key man life insurance for any of the senior members of our management team or other key personnel. The loss of any member of our senior management or other key personnel may have a material adverse effect on our business, results of operations and financial condition.

Our failure to complete fixed-price, fixed-timeframe contracts or transaction-based pricing contracts within budget and on time may negatively affect our profitability.

As an element of our business strategy in response to our clients' reduced IT budgets, we are offering an increasing portion of our services on a fixed-price, fixed-timeframe basis, rather than on a time-and-materials basis. For instance, in fiscal 2009, revenues from fixed-price, fixed-timeframe projects accounted for 35.4% of our total services revenues, including revenues from our business process management services, as compared with 31.0% in fiscal 2008. Decreased IT budgets of our clients have led us to deviate from our standard pricing policies and to offer varied pricing models to our clients in certain situations in order to remain competitive. For example, in fiscal 2009, we have entered into transaction-based pricing contracts with certain clients in order to give our clients the flexibility to pay as they use our services.

The risk of entering into fixed-price, fixed-timeframe arrangements and transaction-based pricing arrangements is that if we fail to properly estimate the appropriate pricing for a project, we may incur lower profits or losses as a result of being unable to execute projects on the timeframe and with the amount of labor we expected. Although we use our software engineering methodologies and processes and past project experience to reduce the risks associated with estimating, planning and performing fixed-price, fixed-timeframe projects and transaction-based pricing projects, we bear the risk of cost overruns, completion delays and wage inflation in connection with these projects. If we fail to estimate accurately the resources and time required for a project, future wage inflation rates, or currency exchange rates, or if we fail to complete our contractual obligations within the contracted timeframe, our profitability may suffer. We expect that we will continue to enter into fixed-price, fixed-timeframe and transaction-based pricing engagements in the future, and such engagements may increase in relation to the revenues generated from engagements on a time-and-materials basis, which would increase the risks to our business.

Our client contracts can typically be terminated without cause and with little or no notice or penalty, which could negatively impact our revenues and profitability.

Our clients typically retain us on a non-exclusive, project-by-project basis. Most of our client contracts, including those that are on a fixed-price, fixed-timeframe basis, can be terminated with or without cause, with between zero and 90 days' notice and without any termination-related penalties. Additionally, our contracts with clients are typically limited to discrete projects without any commitment to a specific volume of business or future work. Our business is dependent on the decisions and actions of our clients, and there are a number of factors relating to our clients that are outside of our control which might lead to termination of a project or the loss of a client, including:

- financial difficulties for a client including on account of the worldwide recession;
- a change in strategic priorities, resulting in a reduced level of technology spending;
- a demand for price reductions including on account of the worldwide recession;
- a change in outsourcing strategy by moving more work to the client's in-house technology departments or to our competitors;
- the replacement by our clients of existing software with packaged software supported by licensors;
- mergers and acquisitions; and
- consolidation of technology spending by a client, whether arising out of mergers and acquisitions, or otherwise.

Our inability to control the termination of client contracts could have a negative impact on our financial condition and results of operations.

Our engagements with customers are singular in nature and do not necessarily provide for subsequent engagements.

Our clients generally retain us on a short-term, engagement-by-engagement basis in connection with specific projects, rather than on a recurring basis under long-term contracts. Although a substantial majority of our revenues are generated from repeat business, which we define as revenue from a client who also contributed to our revenue during the prior fiscal year, our engagements with our clients are typically for projects that are singular in nature. Therefore, we must seek out new engagements when our current engagements are successfully completed or are terminated, and we are constantly seeking to expand our business with existing clients and secure new clients for our services. In addition, in order to continue expanding our business, we may need to significantly expand our sales and marketing group, which would increase our expenses and may not necessarily result in a substantial increase in business. If we are unable to generate a substantial number of new engagements for projects on a continual basis, our business and results of operations would likely be adversely affected.

Our client contracts are often conditioned upon our performance, which, if unsatisfactory, could result in less revenue than previously anticipated.

A number of our contracts have incentive-based or other pricing terms that condition some or all of our fees on our ability to meet

defined performance goals or service levels. Our failure to meet these goals or a client's expectations in such performance-based contracts may result in a less profitable or an unprofitable engagement.

Some of our long-term client contracts contain benchmarking provisions which, if triggered, could result in lower future revenues and profitability under the contract.

As the size and duration of our client engagements increase, clients may increasingly require benchmarking provisions. Benchmarking provisions allow a customer in certain circumstances to request a benchmark study prepared by an agreed upon third-party comparing our pricing, performance and efficiency gains for delivered contract services to that of an agreed upon list of other service providers for comparable services. Based on the results of the benchmark study and depending on the reasons for any unfavorable variance, we may be required to reduce the pricing for future services to be performed under the balance of the contract, which could have an adverse impact on our revenues and profitability.

Our increasing work with governmental agencies may expose us to additional risks.

Currently, the vast majority of our clients are privately or publicly owned. However, we are increasingly bidding for work with governments and governmental agencies, both within and outside the United States. Projects involving governments or governmental agencies carry various risks inherent in the government contracting process, including the following:

- Such projects may be subject to a higher risk of reduction in scope or termination than other contracts due to political and economic factors such as changes in government, pending elections or the reduction in, or absence of, adequate funding;
- Terms and conditions of government contracts tend to be more onerous than other contracts and may include, among other things, extensive rights of audit, more punitive service level penalties and other restrictive covenants. Also, the terms of such contracts are often subject to change due to political and economic factors;
- Government contracts are often subject to more extensive scrutiny and publicity than other contracts. Any negative publicity related to such contracts, regardless of the accuracy of such publicity, may adversely effect our business or reputation.

Any of the above factors could have a material and adverse effect on our business or our results of operations.

Our business will suffer if we fail to anticipate and develop new services and enhance existing services in order to keep pace with rapid changes in technology and in the industries on which we focus.

The technology services market is characterized by rapid technological change, evolving industry standards, changing client preferences and new product and service introductions. Our future success will depend on our ability to anticipate these advances and develop new product and service offerings to meet client needs. We may fail to anticipate or respond to these advances in a timely basis, or, if we do respond, the services or technologies that we develop may not be successful in the marketplace. The development of some of the services and technologies may involve significant upfront investments and the failure of these services and technologies may result in our being unable to recover these investments, in part or in full. Further, products, services or technologies that are developed by our competitors may render our services non-competitive or obsolete.

We have recently introduced, and propose to introduce, several new solutions involving complex delivery models combined with innovative, and often transaction based, pricing models. For instance, we recently introduced an integrated service solution, Software as a Service, or SaaS, that combines the supply of hardware, network infrastructure, application software and associated professional services, maintenance and support. Our new solutions, including the SaaS solution, are often based on a transaction-based pricing model even though these solutions require us to incur significant upfront costs. The complexity of these solutions, our inexperience in developing or implementing them and significant competition in the markets for these solutions may affect our ability to market these solutions successfully. Further, customers may not adopt these solutions widely and we may be unable to recover any investments made in these solutions. Even if these solutions are successful in the market, the dependence of these solutions on third party hardware and software and on our ability to meet stringent service levels in providing maintenance or support services may result in our being unable to deploy these solutions successfully or profitably. Further, where we offer a transaction-based pricing model in connection with an engagement, we may also be unable to recover any upfront costs incurred in solutions deployed by us in full.

Additionally, clients are also seeking extensions in credit terms from the standard term that we provide, and have been seeking credit terms of up to 60 days or higher. Extended credit terms may reduce revenues or delay the realization of revenues and adversely impact our cash flow.

Compliance with new and changing corporate governance and public disclosure requirements adds uncertainty to our compliance policies and increases our costs of compliance.

Changing laws, regulations and standards relating to accounting, corporate governance and public disclosure, including the Sarbanes-Oxley Act of 2002, new SEC regulations, NASDAQ Global Select Market rules, Securities and Exchange Board of India or SEBI rules and Indian stock market listing regulations are creating uncertainty for companies like ours. These new or changed laws, regulations and standards may lack specificity and are subject to varying interpretations. Their application in practice may evolve over time as new guidance is provided by regulatory and governing bodies. This could result in continuing uncertainty regarding compliance matters and higher costs of compliance as a result of ongoing revisions to such governance standards.

In particular, continuing compliance with Section 404 of the Sarbanes-Oxley Act of 2002 and the related regulations regarding our required assessment of our internal control over financial reporting requires the commitment of significant financial and managerial resources and external auditor's independent assessment of the internal control over financial reporting.

In connection with our Annual Report on Form 20-F for fiscal 2009, our management assessed our internal controls over financial reporting, and determined that our internal controls were effective as of March 31, 2009, and our independent auditors have expressed an unqualified opinion over the effectiveness of our internal control over financial reporting as of the end of such period. However, we will undertake management assessments of our internal control over financial reporting in connection with each annual report, and any deficiencies uncovered by these assessments or any inability of our auditors to issue an unqualified opinion could harm our reputation and the price of our equity shares and ADSs.

It is also possible that laws in India may be made more stringent with respect to standards of accounting, auditing, public disclosure and corporate governance. We are committed to maintaining high standards of corporate governance and public disclosure, and our efforts to comply with evolving laws, regulations and standards in this regard have resulted in, and are likely to continue to result in, increased general and administrative expenses and a diversion of management time and attention from revenue-generating activities to compliance activities.

In addition, it may become more expensive and/or more difficult for us to obtain director and officer liability insurance. Further, our board members, Chief Executive Officer, and Chief Financial Officer could face an increased risk of personal liability in connection with their performance of duties and our SEC reporting obligations. As a result, we may face difficulties attracting and retaining qualified board members and executive officers, which could harm our business. If we fail to comply with new or changed laws or regulations, our business and reputation may be harmed.

Disruptions in telecommunications, system failures, or virus attacks could harm our ability to execute our Global Delivery Model, which could result in client dissatisfaction and a reduction of our revenues.

A significant element of our distributed project management methodology, which we refer to as our Global Delivery Model, is to continue to leverage and expand our global development centers. We currently have 54 global development centers located in various countries around the world. Our global development centers are linked with a telecommunications network architecture that uses multiple service providers and various satellite and optical links with alternate routing. We may not be able to maintain active voice and data communications between our various global development centers and our clients' sites at all times due to disruptions in these networks, system failures or virus attacks. Any significant failure in our ability to communicate could result in a disruption in business, which could hinder our performance or our ability to complete client projects on time. This, in turn, could lead to client dissatisfaction and a material adverse effect on our business, results of operations and financial condition.

We may be liable to our clients for damages caused by disclosure of confidential information, system failures, errors or unsatisfactory performance of services.

We are often required to collect and store sensitive or confidential client and customer data. Many of our client agreements do not limit our potential liability for breaches of confidentiality. If any person, including any of our employees, penetrates our network security or misappropriates sensitive data, we could be subject to significant liability from our clients or from our clients' customers for breaching contractual confidentiality provisions or privacy laws. Unauthorized disclosure of sensitive or confidential client and customer data, whether through breach of our computer systems, systems failure or otherwise, could damage our reputation and cause us to lose clients.

Many of our contracts involve projects that are critical to the operations of our clients' businesses, and provide benefits which may be difficult to quantify. Any failure in a client's system or breaches of security could result in a claim for substantial damages against us, regardless of our responsibility for such failure. Furthermore, any errors by our employees in the performance of services for a client, or poor execution of such services, could result in a client terminating our engagement and seeking damages from us.

Although we attempt to limit our contractual liability for consequential damages in rendering our services, these limitations on liability may be unenforceable in some cases, or may be insufficient to protect us from liability for damages. We maintain general liability insurance coverage, including coverage for errors or omissions, however, this coverage may not continue to be available on reasonable terms and may be unavailable in sufficient amounts to cover one or more large claims. Also an insurer might disclaim coverage as to any future claim. A successful assertion of one or more large claims against us that exceeds our available insurance coverage or changes in our insurance policies, including premium increases or the imposition of a large deductible or co-insurance requirement, could adversely affect our operating results.

We are investing substantial cash assets in new facilities and physical infrastructure, and our profitability could be reduced if our business does not grow proportionately.

As of March 31, 2009, we had contractual commitments of approximately \$73 million for capital expenditures, particularly related to the expansion or construction of facilities. We may encounter cost overruns or project delays in connection with new facilities. These expansions will increase our fixed costs. If we are unable to grow our business and revenues proportionately, our profitability will be reduced.

We may be unable to recoup our investment costs to develop our software products.

In fiscal 2009 and fiscal 2008, we earned 3.9% and 3.6% of our total revenue from the licensing of software products. The development of our software products requires significant investments. The markets for our primary suite of software products which we call Finacle™ are competitive. Our current software products or any new software products that we develop may not be commercially successful and the costs of developing such new software products may not be recouped. Since software product revenues typically occur in periods subsequent to the periods in which the costs are incurred for the development of such software products, delayed revenues may cause periodic fluctuations in our operating results.

Our insiders who are significant shareholders may control the election of our board and may have interests which conflict with those of our other shareholders or holders of our ADSs.

Our executive officers and directors, together with members of their immediate families, beneficially owned, in the aggregate, 16.90% of our issued equity shares as of April 28, 2009. As a result, acting together, this group has the ability to exercise significant control over most matters requiring our shareholders' approval, including the election and removal of directors and significant corporate transactions.

We may engage in acquisitions, strategic investments, strategic partnerships or alliances or other ventures that may or may not be successful.

We may acquire or make strategic investments in complementary businesses, technologies, services or products, or enter into strategic partnerships or alliances with third parties in order to enhance our business. For example, in 2004, we acquired Infosys Australia, and subsequently established Infosys China in China and Infosys Consulting in the United States. In fiscal 2008, we established a wholly-owned subsidiary and opened a development center in Mexico. During fiscal 2008, as part of an outsourcing agreement with Philips, our majority-owned subsidiary, Infosys BPO, acquired from Koninklijke Philips Electronics N.V. certain shared services centers in India, Poland and Thailand that were engaged in the provision of finance, accounting and procurement support services to Philips' operations worldwide. During fiscal 2009 Infosys established a wholly owned subsidiary in Sweden. It is possible that we may not identify suitable acquisitions, candidates for strategic investment or strategic partnerships, or if we do identify suitable candidates, we may not complete those transactions on terms commercially acceptable to us, or at all. For instance, on August 25, 2008, we announced a recommended cash offer of approximately £407.1 million for the issued and to be issued share capital of Axon Group plc, or Axon, a company listed on the London Stock Exchange. On September 26, 2008, the Axon Board informed us of a higher competing offer for Axon and subsequently, announced the withdrawal of its recommendation of our offer and its intent to unanimously recommend the higher competing offer. After careful consideration, on October 10, 2008, we announced that we would not increase the price of our original offer and, consequently, on October 20, 2008, Axon announced that it would focus on implementing the competing offer. Our inability to identify suitable acquisition targets or investments or our inability to complete such transactions may affect our competitiveness and our growth prospects.

Even if we are able to identify an acquisition that we would like to consummate, we may not be able to complete the acquisition on commercially reasonable terms or because the target is acquired by another company. Furthermore, in the event that we are able to identify and consummate any future acquisitions, we could:

- issue equity securities which would dilute current shareholders' percentage ownership;
- incur substantial debt;
- incur significant acquisition-related expenses;
- assume contingent liabilities; or
- expend significant cash.

These financing activities or expenditures could harm our business, operating results and financial condition or the price of our common stock. Alternatively, due to difficulties in the capital and credit markets, we may be unable to secure capital on acceptable terms, if at all, to complete acquisitions.

Moreover, even if we do obtain benefits from acquisitions in the form of increased sales and earnings, there may be a delay between the time when the expenses associated with an acquisition are incurred and the time when we recognize such benefits.

Further, if we acquire or establish a company, we could have difficulty in assimilating that company's personnel, operations, technology and software. In addition, the key personnel of the acquired or the established company may decide not to work for us. These difficulties could disrupt our ongoing business, distract our management and employees and increase our expenses.

We have made and may in the future make strategic investments in early-stage technology start-up companies in order to gain experience in or exploit niche technologies. However, our investments may not be successful. The lack of profitability of any of our investments could have a material adverse effect on our operating results.

Risks Related to Investments in Indian Companies and International Operations Generally

Our net income would decrease if the Government of India reduces or withdraws tax benefits and other incentives it provides to us or when our tax holidays expire or terminate.

Currently, the Government of India provides tax benefits to companies that export software from specially designated software technology parks in India. These tax benefits include a 10-year tax holiday from Indian corporate income taxes. We benefit from the 10-year tax holiday on Indian corporate income taxes for the operation of most of our Indian facilities, and as a result, our operations have been subject to relatively low tax liabilities. These tax incentives resulted in a decrease in our income tax expense to the extent of \$325 million and \$282 million for fiscal 2009 and fiscal 2008 compared to the effective tax rates that we estimate would have applied if these incentives had not been available.

The STP tax holiday is available for ten consecutive years. Certain of our STP units have already completed the tax holiday period and for the remaining STP units the tax holiday will expire by fiscal 2010.

In the Finance Act, 2005, the Government of India introduced a separate tax holiday scheme for units set up under designated special economic zones, or SEZs, engaged in manufacture of articles or in provision of services. Under this scheme, units in designated SEZs which begin providing services on or after April 1, 2005 will be eligible for a deduction of 100 percent of profits or gains derived from the export of services for the first five years from commencement of provision of services and 50 percent of such profits or gains for a further five years. Certain tax benefits are also available for a further five years subject to the unit meeting defined conditions. The expiration, modification or termination of any of our tax benefits or holidays including on account of non-extension of the tax holidays relating to STPs in India, would likely increase our effective tax rates significantly, and have a material and adverse effect on our net income.

The Finance Act, 2007, has included income eligible for deductions under sections 10A and 10AA of the Indian Income Tax Act in the computation of book profits for the levy of a Minimum Alternative Tax, or MAT. The rate of MAT, effective April 1, 2007, is 11.33% (including a surcharge and education cess) on our book profits determined after including income eligible for deductions under Sections 10A and 10AA of the Indian Income Tax Act. The Income Tax Act provides that the MAT paid by us can be adjusted against our tax liability over the next seven years. Although MAT paid by us can be set off against our future income tax liability, our net income and cash flows could be adversely affected.

In the event that the Government of India or the government of another country changes its tax policies in a manner that is adverse to us, our tax expense may materially increase, reducing our profitability.

In the recent years, the Government of India has introduced a tax on various services provided within India including on the maintenance and repair of software. The Government of India has in the Finance Act, 2008, included services provided in relation to information technology software under the ambit of service tax, if it is in the course or furtherance of the business. Under this tax, service providers are required to pay a tax of 10% (excluding applicable education cess) on the value of services provided to customers. The Government of India may expand the services covered under the ambit of this tax to include various services provided by us. This tax, if expanded, could increase our expenses, and could adversely affect our operating margins and revenues. Although currently there are no material pending or threatened claims against us for service taxes, such claims may be asserted against us in the future. Defending these claims would be expensive, time consuming and may divert our management's attention and resources from operating our company.

Infosys is subject to a 15% Branch Profit Tax (BPT) in the U.S. to the extent that its U.S. branch's net profit during the year is greater than the increase in the net assets of the U.S. branch during the fiscal year, computed in accordance with the Internal Revenue Code. As of March 31, 2009, Infosys had not triggered the BPT, and the Company's U.S. branch net assets amounted to approximately \$481 million. The Company has recorded a deferred tax liability on its net assets in the United States, to the extent that it intends to distribute its branch profits in the foreseeable future.

We operate in jurisdictions that impose transfer pricing and other tax-related regulations on us, and any failure to comply could materially and adversely affect our profitability.

We are required to comply with various transfer pricing regulations in India and other countries. Failure to comply with such regulations may impact our effective tax rates and consequently affect our net margins. Additionally, we operate in several countries and our failure to comply with the local tax regime may result in additional taxes, penalties and enforcement actions from such authorities. In the event that we do not properly comply with transfer pricing and tax-related regulations, our profitability may be adversely affected.

Wage pressures in India and the hiring of employees outside India may prevent us from sustaining our competitive advantage and may reduce our profit margins.

Wage costs in India have historically been significantly lower than wage costs in the United States and Europe for comparably skilled professionals, which has been one of our competitive strengths. Although, currently, a vast majority of our workforce consists of Indian nationals, we expect to increase hiring in other jurisdictions, including in the United States and in Europe. Any such recruitment of foreign nationals is likely to be at wages higher than those prevailing in India and may increase our operating costs and adversely impact our profitability.

Additionally, wage increases in India may prevent us from sustaining this competitive advantage and may negatively affect our profit margins. We have historically experienced significant competition for employees from large multinational companies that have established and continue to establish offshore operations in India, as well as from companies within India. This competition has led to wage pressures in attracting and retaining employees, and these wage pressures have led to a situation where wages in India are increasing at a faster rate than in the United States, which could result in increased costs for companies seeking to employ technology professionals in India, particularly project managers and other mid-level professionals. We may need to increase our employee compensation more rapidly than in the past to remain competitive with other employers, or seek to recruit in other low labor cost jurisdictions to keep our wage costs low. For example, we established a long term retention bonus policy for our senior executives and employees. Under this policy, certain senior executives and employees will be entitled to a yearly cash bonus upon their continued employment with us based upon seniority, their role in the Company and their performance. Until 2009, when we instituted a freeze in salary increases, we undertook a compensation review on an annual basis, and, pursuant to such review, the average salaries of our employees have increased significantly each year until 2009. Any compensation increases in the future may result in a material adverse effect on our business, results of operations and financial condition.

Terrorist attacks or a war could adversely affect our business, results of operations and financial condition.

Terrorist attacks, such as the attacks of September 11, 2001 in the United States, the attacks of July 25, 2008 in Bangalore, the attacks of November 26 to 29, 2008 in Mumbai and other acts of violence or war, such as the continuing conflict in Iraq, have the potential to have a direct impact on our clients or on us. To the extent that such attacks affect or involve the United States or Europe, our business may be significantly impacted, as the majority of our revenues are derived from clients located in the United States and Europe. In addition, such attacks may destabilize the economic and political situation in India, may make travel more difficult, may make it more difficult to obtain work visas for many of our technology professionals who are required to work in the United States or Europe, and may effectively reduce our ability to deliver our services to our clients. Such obstacles to business may increase our expenses and negatively affect the results of our operations. Furthermore, any attacks in India could cause a disruption in the delivery of our services to our clients, and could have a negative impact on our business, personnel, assets and results of operations, and could cause our clients or potential clients to choose other vendors for the services we provide. Terrorist threats, attacks or war could make travel more difficult, may disrupt our ability to provide services to our clients and could delay, postpone or cancel our clients' decisions to use our services.

The markets in which we operate are subject to the risk of earthquakes, floods and other natural disasters.

Some of the regions that we operate in are prone to earthquakes, flooding and other natural disasters. In the event that any of our business centers are affected by any such disasters, we may sustain damage to our operations and properties, suffer significant financial losses and be unable to complete our client engagements in a timely manner, if at all. Further, in the event of a natural disaster, we may also incur costs in redeploying personnel and property. In addition if there is a major earthquake, flood or other natural disaster in any of the locations in which our significant customers are located, we face the risk that our customers may incur losses, or sustained business interruption and/or loss which may materially impair their ability to continue their purchase of products or services from us. A major earthquake, flood or other natural disaster in the markets in which we operate could have a material adverse effect on our business, financial condition, results of operations and cash flows.

Regional conflicts in South Asia could adversely affect the Indian economy, disrupt our operations and cause our business to suffer.

South Asia has, from time to time, experienced instances of civil unrest and hostilities among neighboring countries, including between India and Pakistan. In recent years there have been military confrontations between India and Pakistan that have occurred in the region of Kashmir and along the India-Pakistan border. Further, in recent months, Pakistan has been experiencing significant instability and this has heightened the risks of conflict in South Asia. Military activity or terrorist attacks in the future could influence the Indian economy by disrupting communications and making travel more difficult and such political tensions could create a greater perception that investments in Indian companies involve higher degrees of risk. This, in turn, could have a material adverse effect on the market for securities of Indian companies, including our equity shares and our ADSs, and on the market for our services.

Restrictions on immigration may affect our ability to compete for and provide services to clients in the United States, which could

hamper our growth and cause our revenues to decline.

The vast majority of our employees are Indian nationals. Most of our projects require a portion of the work to be completed at the client's location. The ability of our technology professionals to work in the United States, Europe and in other countries depends on the ability to obtain the necessary visas and work permits.

As of March 31, 2009, the majority of our technology professionals in the United States held either H-1B visas (approximately 8,200 persons, not including Infosys BPO employees or employees of our wholly owned subsidiaries), allowing the employee to remain in the United States for up to six years during the term of the work permit and work as long as he or she remains an employee of the sponsoring firm, or L-1 visas (approximately 1,400 persons), not including Infosys BPO employees or employees of our wholly owned subsidiaries), allowing the employee to stay in the United States only temporarily. Although there is no limit to new L-1 visas, there is a limit to the aggregate number of new H-1B visas that the U.S. Citizenship and Immigration Services, or CIS, may approve in any government fiscal year which is 65,000 annually. In November 2004, the United States Congress passed a measure that increased the number of available H-1B visas to 85,000 per year. The 20,000 additional visas are only available to skilled workers who possess a Master's or higher degree from institutions of higher education in the United States. Further, in response to the terrorist attacks in the United States, the CIS has increased its level of scrutiny in granting new visas. This may, in the future, also lead to limits on the number of L-1 visas granted. In addition, the granting of L-1 visas precludes companies from obtaining such visas for employees with specialized knowledge: (1) if such employees will be stationed primarily at the worksite of another company in the U.S. and the employee will not be controlled and supervised by his employer, or (2) if such offsite placement is essentially an arrangement to provide labor for hire rather than in connection with the employee's specialized knowledge. Immigration laws in the United States may also require us to meet certain levels of compensation, and to comply with other legal requirements, including labor certifications, as a condition to obtaining or maintaining work visas for our technology professionals working in the United States.

Immigration laws in the United States and in other countries are subject to legislative change, as well as to variations in standards of application and enforcement due to political forces and economic conditions. It is difficult to predict the political and economic events that could affect immigration laws, or the restrictive impact they could have on obtaining or monitoring work visas for our technology professionals. Our reliance on work visas for a significant number of technology professionals makes us particularly vulnerable to such changes and variations as it affects our ability to staff projects with technology professionals who are not citizens of the country where the work is to be performed. As a result, we may not be able to obtain a sufficient number of visas for our technology professionals or may encounter delays or additional costs in obtaining or maintaining the conditions of such visas. Additionally, we may have to apply in advance for visas and this could result in additional expenses during certain quarters of the fiscal year.

Changes in the policies of the Government of India or political instability could delay the further liberalization of the Indian economy and adversely affect economic conditions in India generally, which could impact our business and prospects.

Since 1991, successive Indian governments have pursued policies of economic liberalization, including significantly relaxing restrictions on the private sector. Nevertheless, the role of the Central and State governments in the Indian economy as producers, consumers and regulators has remained significant. The current Government of India, formed in May 2004, has announced policies and taken initiatives that support the continued economic liberalization policies pursued by previous governments. However, these liberalization policies may not continue in the future. The rate of economic liberalization could change, and specific laws and policies affecting technology companies, foreign investment, currency exchange and other matters affecting investment in our securities could change as well. A significant change in India's economic liberalization and deregulation policies could adversely affect business and economic conditions in India generally, and our business in particular.

For instance, in April 2007, the Government of India announced a number of changes in its policies applicable to Special Economic Zones, or SEZs, to provide for, among other things, a cap on the size of land available for SEZs. The Indian Government has also announced its intent to make further changes in the SEZ policies. Some of our software development centers located at Chandigarh, Chennai, Mangalore and Pune currently operate in SEZs and many of our proposed development centers are likely to operate in SEZs. If the Government of India changes its policies affecting SEZs in a manner that adversely impact the incentives for establishing and operating facilities in SEZs, our business, results of operations and financial condition may be adversely affected.

Political instability could also delay the reform of the Indian economy and could have a material adverse effect on the market for securities of Indian companies, including our equity shares and our ADSs, and on the market for our services.

Our international expansion plans subject us to risks inherent in doing business internationally.

Currently, we have global development centers in 13 countries around the world, with our largest development centers located in India. We have recently established or intend to establish new development facilities. In October 2003, we established Infosys China and in January 2004, we acquired Infosys Australia to expand our operations in those countries. In April 2004, we formed Infosys Consulting to focus on consulting services in the United States. Recently, we established a wholly-owned subsidiary, Infosys Technologies S. De RL De CV ("Infosys Mexico"), in Monterrey, Mexico, to provide business consulting and information technology services for clients in North America, Latin America and Europe. During fiscal 2008, as part of an outsourcing agreement with Philips, our majority-owned subsidiary, Infosys BPO, acquired from Koninklijke Philips Electronics N.V. certain shared services centers in India, Poland and Thailand that are engaged in the provision of finance, accounting and procurement support services to Philips' operations worldwide.

We also have a very large workforce spread across our various offices worldwide. As of March 31, 2009, we employed approximately 104,900 employees worldwide, and approximately 20,200 of those employees were located outside of India. Because of our global presence, we are subject to additional risks related to our international expansion strategy, including risks related to compliance with a wide variety of treaties, national and local laws, including multiple and possibly overlapping tax regimes, privacy laws and laws dealing with data protection, export control laws, restrictions on the import and export of certain technologies and national and local labor laws dealing with immigration, employee health and safety, and wages and benefits, applicable to our employees located in our various international offices and facilities. We may from time to time be subject to litigation or administrative actions resulting from claims against us by current or former employees, individually or as part of a class action, including for claims of wrongful termination, discrimination, misclassification, payment of redundancy payments under TUPE-type legislation, or other violations of labor laws, or other alleged conduct. Our being held liable for unpaid compensation, redundancy payments, statutory penalties, and other damages arising out of such actions and litigations could adversely affect our revenues and operating profitability. For example, in December 2007, we entered into a voluntary settlement with the California Division of Labor Standards Enforcement regarding the potential misclassification of certain of our current and former employees, whereby we agreed to pay overtime wages that may have been owed to such employees. The total settlement amount was approximately \$26 million, including penalties and taxes.

In addition, we may face competition in other countries from companies that may have more experience with operations in such countries or with international operations generally. We may also face difficulties integrating new facilities in different countries into our existing operations, as well as integrating employees that we hire in different countries into our existing corporate culture. As an international company, our offshore and onsite operations may also be impacted by disease, epidemics and local political instability. Our international expansion plans may not be successful and we may not be able to compete effectively in other countries. Any of these events could adversely affect our revenues and operating profitability.

It may be difficult for holders of our ADSs to enforce any judgment obtained in the United States against us or our affiliates.

We are incorporated under the laws of India and many of our directors and executive officers reside outside the United States. Virtually all of our assets are located outside the United States. As a result, holders of our ADSs may be unable to effect service of process upon us outside the United States. In addition, holders of our ADSs may be unable to enforce judgments against us if such judgments are obtained in courts of the United States, including judgments predicated solely upon the federal securities laws of the United States.

The United States and India do not currently have a treaty providing for reciprocal recognition and enforcement of judgments (other than arbitration awards) in civil and commercial matters. Therefore, a final judgment for the payment of money rendered by any federal or state court in the United States on the basis of civil liability, whether or not predicated solely upon the federal securities laws of the United States, would not be enforceable in India. However, the party in whose favor such final judgment is rendered may bring a new suit in a competent court in India based on a final judgment that has been obtained in the United States. The suit must be brought in India within three years from the date of the judgment in the same manner as any other suit filed to enforce a civil liability in India. It is unlikely that a court in India would award damages on the same basis as a foreign court if an action is brought in India. Furthermore, it is unlikely that an Indian court would enforce foreign judgments if it viewed the amount of damages awarded as excessive.

or inconsistent with Indian practice. A party seeking to enforce a foreign judgment in India is required to obtain approval from the Reserve Bank of India under the Foreign Exchange Management Act, 1999, to repatriate any amount recovered pursuant to the execution of such a judgment.

The laws of India do not protect intellectual property rights to the same extent as those of the United States, and we may be unsuccessful in protecting our intellectual property rights. We may also be subject to third party claims of intellectual property infringement.

We rely on a combination of patent, copyright, trademark and design laws, trade secrets, confidentiality procedures and contractual provisions to protect our intellectual property. However, the laws of India do not protect proprietary rights to the same extent as laws in the United States. Therefore, our efforts to protect our intellectual property may not be adequate. Our competitors may independently develop similar technology or duplicate our products or services. Unauthorized parties may infringe upon or misappropriate our products, services or proprietary information.

The misappropriation or duplication of our intellectual property could disrupt our ongoing business, distract our management and employees, reduce our revenues and increase our expenses. We may need to litigate to enforce our intellectual property rights or to determine the validity and scope of the proprietary rights of others. Any such litigation could be time consuming and costly. As the number of patents, copyrights and other intellectual property rights in our industry increases, and as the coverage of these rights increase, we believe that companies in our industry will face more frequent infringement claims. Defense against these claims, even if such claims are not meritorious, could be expensive, time consuming and may divert our management's attention and resources from operating our company. From time to time, third parties have asserted and may in the future assert patent, copyright, trademark and other intellectual property rights against us or our customers. Our business partners may have similar claims asserted against them. A number of third parties, including companies with greater resources than Infosys, have asserted patent rights to technologies that we utilize in our business. If we become liable to third parties for infringing their intellectual property rights, we could be required to pay a substantial damage award and be forced to develop non-infringing technology, obtain a license or cease selling the applications or products that contain the infringing technology. We may be unable to develop non-infringing technology or to obtain a license on commercially reasonable terms, or at all. An unfavorable outcome in connection with any infringement claim against us as a result of litigation, other proceeding or settlement, could have a material and adverse impact on our business, results of operations and financial position.

For example, on April 15, 2008, a civil court in Bobigny, France ruled that our use of the name "Infosys" constituted infringement of the trademark, corporate name and trade name "Infosys France" in France and that we could not use the name "Infosys" in France as a trademark, corporate name, trade name and domain name with immediate effect. We have recently entered into a settlement agreement with respect to this infringement claim, but a similar litigation or other proceeding in any of the jurisdictions in which we operate could disrupt our ongoing business, distract our management and employees, and affect our future business.

Our ability to acquire companies organized outside India depends on the approval of the Government of India and/or the Reserve Bank of India, and failure to obtain this approval could negatively impact our business.

Generally, the Reserve Bank of India must approve any acquisition by us of any company organized outside of India. The Reserve Bank of India permits acquisitions of companies organized outside of India by an Indian party without approval if the transaction consideration is paid in cash, the transaction value does not exceed 400% of the net worth of the acquiring company as on the date of the latest audited balance sheet, or unless the acquisition is funded with cash from the acquiring company's existing foreign currency accounts or with cash proceeds from the issue of ADRs/GDRs.

It is possible that any required approval from the Reserve Bank of India and the Ministry of Finance of the Government of India or any other government agency may not be obtained. Our failure to obtain approvals for acquisitions of companies organized outside India may restrict our international growth, which could negatively affect our business and prospects.

Indian laws limit our ability to raise capital outside India and may limit the ability of others to acquire us, which could prevent us from operating our business or entering into a transaction that is in the best interests of our shareholders.

Indian law relating to foreign exchange management constrains our ability to raise capital outside India through the issuance of equity or convertible debt securities. Generally, any foreign investment in, or acquisition of an Indian company, subject to certain exceptions, requires approval from relevant government authorities in India, including the Reserve Bank of India. There are, however, certain exceptions to this approval requirement for technology companies on which we are able to rely. Changes to such policies may create restrictions on our capital raising abilities. For example, a limit on the foreign equity ownership of Indian technology companies or pricing restrictions on the issue of ADRs/GDRs may constrain our ability to seek and obtain additional equity investment by foreign investors. In addition, these restrictions, if applied to us, may prevent us from entering into certain transactions, such as an acquisition by a non-Indian company, which might otherwise be beneficial for us and the holders of our equity shares and ADSs.

Additionally, under current Indian law, the sale of a technology services company can result in the loss of the tax benefits for specially designed software technology parks in India. The potential loss of this tax benefit may discourage others from acquiring us or entering into a transaction with us that is in the best interest of our shareholders.

Risks Related to the ADSs

Historically, our ADSs have traded at a significant premium to the trading prices of our underlying equity shares, and may not continue to do so in the future.

Historically, our ADSs have traded on NASDAQ at a premium to the trading prices of our underlying equity shares on the Indian stock exchanges. We believe that this price premium has resulted from the relatively small portion of our market capitalization previously represented by ADSs, restrictions imposed by Indian law on the conversion of equity shares into ADSs, and an apparent preference of some investors to trade dollar-denominated securities. We have already completed three secondary ADS offerings and the completion of any additional secondary ADS offering will significantly increase the number of our outstanding ADSs. Also, over time, some of the restrictions on the issuance of ADSs imposed by Indian law have been relaxed and we expect that other restrictions may be relaxed in the future. As a result, the historical premium enjoyed by ADSs as compared to equity shares may be reduced or eliminated upon the completion of any additional secondary offering of our ADSs or similar transactions in the future, a change in Indian law permitting further conversion of equity shares into ADSs or changes in investor preferences.

Sales of our equity shares may adversely affect the prices of our equity shares and ADSs.

Sales of substantial amounts of our equity shares, including sales by our insiders in the public market, or the perception that such sales may occur, could adversely affect the prevailing market price of our equity shares or the ADSs or our ability to raise capital through an offering of our securities. In the future, we may also sponsor the sale of shares currently held by some of our shareholders as we have done in the past, or issue new shares. We can make no prediction as to the timing of any such sales or the effect, if any, that future sales of our equity shares, or the availability of our equity shares for future sale, will have on the market price of our equity shares or ADSs prevailing from time to time.

Indian law imposes certain restrictions that limit a holder's ability to transfer the equity shares obtained upon conversion of ADSs and repatriate the proceeds of such transfer which may cause our ADSs to trade at a premium or discount to the market price of our equity shares.

Under certain circumstances, the Reserve Bank of India must approve the sale of equity shares underlying ADSs by a non-resident of India to a resident of India. The Reserve Bank of India has given general permission to effect sales of existing shares or convertible debentures of an Indian company by a resident to a non-resident, subject to certain conditions, including the price at which the shares may be sold. Additionally, except under certain limited circumstances, if an investor seeks to convert the rupee proceeds from a sale of equity shares in India into foreign currency and then repatriate that foreign currency from India, he or she will have to obtain Reserve Bank of India approval for each such transaction. Required approval from the Reserve Bank of India or any other government agency may not be obtained on terms favorable to a non-resident investor or at all.

An investor in our ADSs may not be able to exercise preemptive rights for additional shares and may thereby suffer dilution of such investor's equity interest in us.

Under the Companies Act, 1956, or the Indian Companies Act, a company incorporated in India must offer its holders of equity shares preemptive rights to subscribe and pay for a proportionate number of shares to maintain their existing ownership percentages prior to the issuance of any new equity shares, unless such preemptive rights have been waived by three-fourths of the shares voting on the resolution to waive such rights. Holders of ADSs may be unable to exercise preemptive rights for equity shares underlying ADSs unless a registration statement under the Securities Act of 1933 as amended, or the Securities Act, is effective with respect to such rights or an exemption from the registration requirements of the Securities Act is available. We are not obligated to prepare and file such a registration statement and our decision to do so will depend on the costs and potential liabilities associated with any such registration statement, as well as the perceived benefits of enabling the holders of ADSs to exercise their preemptive rights, and any other factors we consider appropriate at the time. No assurance can be given that we would file a registration statement under these circumstances. If we issue any such securities in the future, such securities may be issued to the Depositary, which may sell such securities for the benefit of the holders of the ADSs. There can be no assurance as to the value, if any, the Depositary would receive upon the sale of such securities. To the extent that holders of ADSs are unable to exercise preemptive rights granted in respect of the equity shares represented by their ADSs, their proportional interests in us would be reduced.

ADS holders may be restricted in their ability to exercise voting rights.

At our request, the Depositary will electronically mail to holders of our ADSs any notice of shareholders' meeting received from us together with information explaining how to instruct the Depositary to exercise the voting rights of the securities represented by ADSs. If the Depositary receives voting instructions from a holder of our ADSs in time, relating to matters that have been forwarded to such holder, it will endeavor to vote the securities represented by such holder's ADSs in accordance with such voting instructions. However, the ability of the Depositary to carry out voting instructions may be limited by practical and legal limitations and the terms of the securities on deposit. We cannot assure that holders of our ADSs will receive voting materials in time to enable such holders to return voting instructions to the Depositary in a timely manner. Securities for which no voting instructions have been received will not be voted. There may be other communications, notices or offerings that we only make to holders of our equity shares, which will not be forwarded to holders of ADSs. Accordingly, holders of our ADSs may not be able to participate in all offerings, transactions or votes that are made available to holders of our equity shares.

Item 4. Information on the Company

COMPANY OVERVIEW

We define, design and deliver IT enabled business solutions for our clients. We believe that our solutions help our clients shift their operational priorities to improve business performance and achieve operational efficiency.

Our comprehensive end-to-end business solutions leverage technology for our clients. Our suite of business solutions includes technical consulting, design, development, product engineering, maintenance, systems integration, package enabled consulting and implementation and infrastructure management services. We also provide software products to the banking industry. Through Infosys BPO, we provide business process management services such as offsite customer relationship management, finance and accounting, and administration and sales order processing. Our clients rely on our solutions to enhance their business performance.

Our professionals deliver high quality solutions through our Global Delivery Model. Using our Global Delivery Model, we divide projects into components that we execute simultaneously at client sites and at our development centers in India and around the world. We optimize our cost structure by maintaining the flexibility to execute project components where it is most cost effective. Our Global Delivery Model, with its easily scalable infrastructure and ability to execute project components around the clock and across time zones, enables us to reduce project delivery times.

We have organized our sales, marketing and business development teams to focus on specific geographies and industries, thus enabling us to customize our service offerings to our clients' needs. Our primary geographic markets are North America, Europe, and the Asia-Pacific region. We serve clients in banking and capital markets; communications, media and entertainment; energy, utilities and services; insurance; healthcare and life sciences; manufacturing; retail, consumer product goods and logistics; and other industries.

Our revenues grew from \$4,176 million in fiscal 2008 to \$4,663 million in fiscal 2009, representing a growth of 11.7%. Our net income grew from \$1,163 million to \$1,281 million during the same period, representing an annual growth of 10.1%. Between March 31, 2005 and March 31, 2009, our total employees grew from approximately 36,800 to approximately 104,900, representing a compound annual growth rate of approximately 29.9%.

We believe we have among the best talent in the Indian technology services industry, and we are committed to remaining among the industry's leading employers.

We were incorporated on July 2, 1981 in Maharashtra, India as Infosys Consultants Private Limited, a private limited company under the Indian Companies Act, 1956. We changed our name to Infosys Technologies Private Limited in April 1992 and to Infosys Technologies Limited in June 1992, when we became a public limited company. We completed our initial public offering of equity shares in India in 1993 and our initial public offering of ADSs in the United States in 1999. In August 2003, June 2005 and November 2006 we completed sponsored secondary offerings of ADSs in the United States on behalf of our shareholders. Our 2005 and 2006 offerings also each included a public offering without listing in Japan, or POWL. In December 2006, we became the first Indian company to be added to the NASDAQ - 100 index. In 2008, we were selected as an original component member of 'The Global Dow', a world-wide stock index made up of 150 leading blue-chip stocks.

Infosys BPO is our majority-owned and controlled subsidiary. Infosys Australia, Infosys China, Infosys Consulting, Infosys Mexico and Infosys Sweden are our wholly-owned and controlled subsidiaries.

The address of our registered office is Electronics City, Hosur Road, Bangalore-560 100, Karnataka, India. The telephone number of our registered office is +91-80-2852-0261. Our agent for service of process in the United States is CT Corporation System, 1350 Treat Boulevard, Suite 100, Walnut Creek, CA 94597-2152. Our website address is www.infosys.com and the information contained in our website does not constitute a part of this Annual Report.

Principal Capital Expenditures and Divestitures

In fiscal 2009 and 2008, we spent \$285 million and \$373 million, respectively, on capital expenditure. As of March 31, 2009, we had contractual commitments of approximately \$73 million for capital expenditure. These commitments included approximately \$ 64 million in domestic purchases and \$9 million in imports and overseas commitments for hardware, supplies and services. All our capital expenditures were financed out of cash generated from operations.

On April 1, 2008, Infosys Australia acquired 100% of the equity shares of Mainstream Software Pty Limited (MSPL) for a cash consideration of \$3 million, of which \$1 million was yet to be paid as of March 31, 2009. Consequent to this acquisition, intellectual property rights amounting to \$3 million have been recorded. Considering the economic benefits expected to be obtained from the intellectual property rights the same have been fully amortized during the year.

On October 1, 2007, Infosys BPO acquired 100% of the equity shares of P-Financial Services Holding B.V. This business acquisition was conducted by entering into a Sale and Purchase Agreement with Koninklijke Philips Electronics N.V. (Philips), a company incorporated under the laws of the Netherlands, for acquiring the shared service centers of Philips for finance, accounting and procurement business in Poland, Thailand and India for a cash consideration of \$27 million, of which \$1 million was paid during the year ended March 31, 2009. The acquisitions of Poland and India centers were consummated on October 1, 2007 and Thailand center on December 3, 2007.

During the year ended March 31, 2009, the investments held by P-Financial Services Holding B.V. in its wholly owned subsidiaries Pan-Financial Shared Services India Private Limited, Infosys BPO (Poland) Sp. Z.o.o., and Infosys BPO (Thailand) Limited were transferred to Infosys BPO, consequent to which P-Financial Services Holding B.V. was liquidated. During the three months ended March 31, 2009, Infosys BPO merged its wholly owned subsidiary Pan-Financial Shared Services India Private Limited, retrospectively with effect from April 1, 2008, via a scheme of amalgamation sanctioned by the High Courts of Karnataka and Tamil Nadu.

On March 5, 2009, the company incorporated a wholly owned subsidiary, Infosys Technologies (Sweden) AB.

INDUSTRY OVERVIEW
