

Risk Factors

Factors Relating to the Company

Dependence on Mining Exploration Agreements

An integral part of our operations is the participation in mining exploration projects with experienced mining companies. Such projects benefit us by providing a source of outside funds for exploration of mining rights, giving us access to the holdings of outside parties without the risks and costs of outright acquisition. They also enable us to expand the scope of knowledge and experience of our senior management, geologists and engineers through increased contact with their counterparts from other organizations. We can be highly dependent upon our partners, co-venturers or other shareholders in a joint mining exploration project carrying out their obligations under the applicable joint mining exploration agreement or mining operating agreement. Such partners, co-venturers and other shareholders in a joint mining exploration venture may contribute capital to cover the expenses of the joint venture project or provide critical technological expertise and/or management and organizational expertise. See "Item 4. Information on the Company-Yanacocha-Overview" for a description of how we and Newmont Mining Corporation, a Delaware corporation, or Newmont Mining, have joined together to participate in Yanacocha and how Yanacocha is dependent upon Newmont Peru Limited, Peruvian Branch, or Newmont Peru, to provide management and other expertise to the Yanacocha project. If, however, a partner, a co-venturer or in certain cases another shareholder does not carry out its obligations under the applicable joint venture agreement, joint mining operating agreement, by-laws or shareholders agreement, the value of our investment in the joint mining exploration project could be adversely affected and we could incur significant expense in enforcing our rights or pursuing remedies. There can be no assurance that our current or future partners will fulfill their obligations under such agreements. See "Item 4. Information on the Company-Yanacocha" and "Item 4. Information on the Company-The Company-Business Overview-Exploration".

Investment in International Operations

Foreign operations are subject to certain risks inherent in conducting business abroad, including, among others, exposure to foreign currency fluctuations, devaluations or supply restrictions, exchange control regulations, government policies, price and wage controls, taxation, intervention, social instability and other political, economic or diplomatic developments beyond our control. There can be no assurance that our foreign exploration activities will not be adversely affected in the future.

We carry out our exploration activities in Argentina, Mexico and Spain. Argentina has suffered a prolonged economic crisis for the past several years; however, such economic conditions have not affected us. In recent months, the Argentine economy has shown signs of improvement, although there can be no assurance as to when the Argentine economy will recover or if we may be affected in the future.

Prices of Gold and Silver

Because our revenues are derived primarily from the sale of ore concentrates containing gold and silver, and Yanacocha's revenues are derived primarily from the sale of gold and silver, the prices we and Yanacocha obtain for gold and silver and ore concentrates containing such metals, and our and Yanacocha's earnings, are directly related to world market prices for such metals. Such prices have historically fluctuated widely and are affected by numerous factors beyond our control, including the overall demand for and worldwide supply of gold, silver and other metals; the availability and price of competing commodities, international economic trends, currency exchange fluctuations, expectations of inflation, actions of commodity markets participants, consumption and demand patterns and political events in major producing countries. Although we engage in hedging activities, such as forward sales and option contracts, to minimize our exposure to fluctuations in the prices of gold, silver and other metals, there can be no assurance that hedging activities will protect us from price fluctuations in such metals. In 2006, management decided to close out gold derivative contracts maintained as of December 31, 2005 and replace them with normal sales contracts. See "Item 11. Quantitative and Qualitative Disclosure About Market Risk" and Note 34 to the Financial Statements. For information on gold and silver prices for each of the years in the five-year period ended December 31, 2005, see "Item 4. Information on the Company-The Company-Business Overview-Sales of Metal Concentrates". On December 30, 2005 and April 28, 2006, the morning fixing price for gold on the London Bullion Market was US\$513 per ounce and US\$638.25 per ounce, respectively. On December 30, 2005 and April 28, 2006, the afternoon fixing spot price of silver on the London market, or London Spot, was US\$8.83 per ounce and US\$12.56 per ounce, respectively.

Impact of Government Regulation

Our and Yanacocha's activities in Peru depend on mining concessions for exploration, which we refer to as mining concessions, being obtained from the Peruvian Ministry of Energy and Mines, or MEM, in our case, and through the assignment of concessions granted to a related entity by the Peruvian government, in the case of Yanacocha. In addition, our and Yanacocha's activities in Peru depend on provisional permits, obtained from the MEM, for exploration rights of the area of the claim, which we refer to as provisional permits, and together with mining concessions, referred to as mining rights, and/or processing concessions, obtained from the MEM, for treatment of mining ores, or processing concessions, as well as compliance by us and Yanacocha with certain agreements entered into with the Peruvian government. Under Peru's current legal and regulatory regime, our mining rights have an indefinite term and Yanacocha's assigned mining rights have a term of 20 years, contingent upon payment of the annual concession fee for each mining right, with an option to renew for an additional term of 20 years. The mining rights are maintained by meeting a minimum annual level of production or investment and by the annual payment of a concession fee. A fine is payable for the years in which minimum production or investment requirements are not met. In addition if, in any year, the concession fee is not paid, payment may be made the following year within the term provided for making such payment. Any payment made will be applied to the prior year if such prior year was not paid. Failure to pay such concession fees or fines for two consecutive years could result in the loss of one or more of the mining rights. However, mining and processing concessions will not lapse if the administrative authority failed to issue a resolution declaring the termination of the concession within the first five years following the date on which such payment failure occurred. Our and Yanacocha's processing concessions enjoy the same duration and tenure as the mining rights, subject to payment of a fee based on nominal capacity for the processing plant. Failure to pay such processing fees or fines for two consecutive years could result in the loss of the processing concessions. We are, and Yanacocha has informed us that Yanacocha is, current in the payment of all amounts due in respect to its mining and processing concessions.

On June 24, 2004, the Peruvian Congress approved Law 28258 - Mining Royalties Law. This law established a mining royalty that owners of mining concessions must pay to the Peruvian government for the exploitation of metallic and non-metallic resources. The mining royalties are calculated on a sliding scale with rates ranging from 1 to 3 percent over the value of mineral concentrates based on international market prices. See "Item 4. Information on the Company-The Company-Regulatory Framework-Mining Royalties". We made our first payment of the mining royalty pursuant to Law 28258 in 2004. Yanacocha was exempt from this payment pursuant to its Mining Law Stabilization Agreements under the General Mining Law with the Peruvian government. There can be no assurance that the Peruvian government will not impose additional mining royalties on us or Yanacocha in the future or that such mining royalties will not have an adverse effect on our or Yanacocha's results of operations or financial condition.

Environmental and other Regulatory Matters

Our and Yanacocha's exploration, mining, milling, smelting and refining activities are also subject to a number of Peruvian laws and regulations, including environmental laws and regulations. Additional matters subject to regulation include, but are not limited to, concession fees, transportation, production, water use and discharges, power use and generation, use and storage of explosives, surface rights, housing and other facilities for workers, reclamation, taxation, labor standards, mine safety and occupational health.

We anticipate additional laws and regulations will be enacted over time with respect to environmental matters. The development of more stringent environmental protection programs in Peru could impose constraints and additional costs on our and Yanacocha's operations and require us and Yanacocha to make significant capital expenditures in the future. Although we believe we are substantially in compliance, and Yanacocha has advised us that Yanacocha is substantially in compliance, with all applicable environmental regulations, there can be no assurance that future legislative or regulatory developments will not have an adverse effect on our or Yanacocha's business or results of operations. See "Item 4. Information on the Company-The Company-Regulatory Framework-Environmental Matters" and "-Permits" and "Item 4. Information on the Company-Yanacocha-Regulation, Permitting and Environmental Matters".

Hedging

In October 2004, our Board of Directors issued a mandate not to enter into new hedging transactions. At December 31, 2005, we were engaged in gold price hedging activities, such as forward sales and put/call options, from derivative contracts executed prior to 1999. Since 2003, we have been modifying the terms of certain derivative instruments in order to qualify them as normal sales contracts. In March 2006, we closed out all our outstanding gold derivative contracts as of December 31, 2005 and replaced them with normal sales contracts. See "Item 11. Quantitative and Qualitative Disclosures About Market Risk" and Note 34 to the Financial Statements. No assurance can be given that we will employ these or other hedging techniques in the future or that these or other hedging techniques, if employed, will be successful or achieve their desired effect.

Yanacocha has generally not engaged in, and is currently not engaged in, gold price hedging activities, such as forward sales or option contracts, to minimize its exposure to fluctuations in the price of gold. No assurance can be given, however, that Yanacocha will not enter into hedging transactions in the future or that such transactions, if entered into, will have the desired effect.

Speculative Nature of Precious Metals Exploration

Precious metals exploration, particularly gold exploration, is highly speculative in nature, involves many risks and frequently is unsuccessful. There can be no assurance that our or Yanacocha's precious metals exploration efforts will be successful. Once mineralization is discovered, it may take a number of years from the initial phases of drilling before production is possible, during which time the economic feasibility of production may change. Substantial expenditures are required to establish proven and probable ore reserves through drilling, to determine metallurgical processes to extract the metals from the ore and, in the case of new properties, to construct mining and processing facilities. As a result of these uncertainties, no assurance can be given that our or Yanacocha's exploration programs will result in the expansion or replacement of current production with new proven and probable ore reserves.

Advanced exploration projects have no operating history upon which to base estimates of proven and probable ore reserves and estimates of future cash operating costs. Such estimates are, to a large extent, based upon the interpretation of geologic data obtained from drill holes and other sampling techniques, and feasibility studies which derive estimates of cash operating costs based upon anticipated tonnage and grades of ore to be mined and processed, the configuration of the ore body, expected recovery rates of the mineral from the ore, comparable facility and equipment operating costs, anticipated climatic conditions and other factors. As a result, it is possible that actual cash operating costs and economic returns based upon proven and probable ore reserves may differ significantly from those originally estimated. Moreover, significant decreases in actual over expected prices may mean reserves, once found, will be uneconomical to produce. It is not unusual in new mining operations to experience unexpected problems during the start-up phase. Our significant affiliate, Yanacocha, uses US\$400 per ounce of gold to calculate its gold reserves; however, we use a fixed price of US\$350 per ounce of gold and a three-year average historic price of US\$6.30 per ounce of silver to calculate our proven and probable ore reserves due to the fact that most of our gold sales contracts consider fixed prices.

Increased Costs Could Affect Profitability

Costs at any particular mining location frequently are subject to variation due to a number of factors, such as changing ore grade, changing metallurgy and revisions to mine plans in response to the physical shape and location of the ore body. In addition, costs are affected by the price of commodities, such as fuel, electricity and labor. Commodity costs are at times subject to volatile price movements, including increases that could make production at certain operations less profitable. Reported costs may be affected by changes in accounting standards. A material increase in costs at any significant location could have a significant effect on our profitability.

Capital Intensive Nature of Precious Metals Exploration

Precious metals exploration requires substantial capital expenditures for the exploration, extraction, production and processing stages and for machinery, equipment and experienced personnel. There can be no assurance that we or Yanacocha will generate sufficient cash flow and/or that we will have access to sufficient external sources of funds in the form of outside investment or loans to continue exploration activities at the same or higher levels than in the past.

Reserves Estimates

The proven and probable ore reserve figures presented in this Annual Report are our and Yanacocha's estimates, and there can be no assurance that the level of recovery of gold, silver and certain other metals will be realized. Reserve estimates may require revision based on actual production experience. Market price fluctuations of gold, silver and these other metals, as well as increased production costs or reduced recovery rates, may render proven and probable ore reserves containing relatively lower grades of mineralization uneconomic to exploit and may ultimately result in a restatement of proven and probable ore reserves. Moreover, short-term operating factors relating to the reserves, such as the processing of different types of ore or ore grades, could adversely affect our or Yanacocha's profitability in any particular accounting period. See "Item 4. Information on the Company-Property, Plants and Equipment-The Company's Property-Reserves" and "Item 4. Information on the Company-Property, Plants and Equipment-Yanacocha's Properties-Reserves".

Replacement of Reserves

As we produce gold, silver, zinc and other metals, we deplete our ore reserves for such metals. To maintain production levels, we must replace depleted reserves by exploiting known ore bodies and locating new deposits. Success in exploration for gold, silver and the other metals we produce is very uncertain and there is a risk that our depletion of reserves will not be off-set by new discoveries.

Industry Risks

The business of mining, smelting and refining gold, silver and other metals is generally subject to a number of risks and hazards, including industrial accidents, labor disputes, unusual or unexpected geological conditions, changes in the regulatory environment, environmental hazards and weather and other natural phenomena such as earthquakes. Such occurrences could result in damage to, or destruction of, mining properties or production facilities, personal injury or death, environmental damage, delays in mining, monetary losses and possible legal liability. We and Yanacocha each maintain insurance against risks that are typical in the mining industry in Peru and in amounts that we and Yanacocha believe to be adequate but which may not provide adequate coverage in certain circumstances. Insurance against certain risks (including certain liabilities for environmental pollution or other hazards as a result of exploration and production) is not generally available to us or Yanacocha or to other companies within the industry.

Labor Matters

We have not experienced a strike since 1993, which is indicative of the good relations between us and our employees. However, there can be no assurance that this situation will continue and that we will not experience strikes or other labor-related work stoppages that could have a material adverse effect on our operations and/or operating results in the future. In February 2004, Yanacocha entered into its first collective bargaining agreement with Workers' Union of Minera Yanacocha SRL, or the Union, which was created and registered before the Peruvian Labor Ministry on December 9, 2003. This collective bargaining agreement expires in February 2007. Yanacocha has informed us that it considers its relations with its employees to be good. However, a small percentage of Union members engaged in a three-day strike in April 2006 despite the fact that the collective bargaining agreement has not yet expired. The strike did not have any material impact on Yanacocha's operations; nevertheless there can be no assurance that Yanacocha will not experience other strikes or labor-related work stoppages that could have a material adverse effect on its operations or its operating results. See "Item 6. Directors, Senior Management and Employees-Employees" and "Item 4. Information on the Company-Yanacocha-Employees".

Political and Social Perception

Our and Yanacocha's exploration and production activities are potentially subject to political and social risks. Over the past several years, we and Yanacocha have been the target of local political protests, including community protests at our La Zanja project and a blockade of the road in protest of drilling activities at Yanacocha's Cerro Quilish mine. See "Item 4. Information on the Company-The Company-History and Development-Joint Venture Exploration Projects-La Zanja" and "Item 4. Information on the Company-Yanacocha-Legal Proceedings". There can be no assurance that these incidents will not continue, or that similar incidents will not occur, or that the continuation or intensification of community protests would not adversely affect our or Yanacocha's exploration and production activities or our or Yanacocha's results of operations or financial condition.

Investment Company Act

We own a 43.65 percent partnership interest in Yanacocha. This partnership interest may constitute "investment securities" for purposes of the U.S. Investment Company Act of 1940, as amended, or the Investment Company Act.

Under the Investment Company Act, an investment company is defined in relevant part to include (i) any company that is or holds itself out as being engaged primarily, or proposes to engage primarily, in the business of investing, reinvesting or trading in securities and (ii) any company that owns or proposes to acquire investment securities having a value exceeding 40 percent of such company's total assets (exclusive of certain items) on an unconsolidated basis. Issuers that are investment companies within the meaning of the Investment Company Act, and which do not qualify for an exemption from the provisions of such act, are required to register with the Commission and are subject to substantial regulations with respect to capital structure, operations, transactions with affiliates and other matters. If we were deemed to be an investment company and did not qualify for an exemption from the provisions of the Investment Company Act, we would be required to register with the Commission and would be subject to such regulations, which would be unduly burdensome and costly for us and possibly adversely impact us.

We received an order from the Commission on April 19, 1996 declaring us to be primarily engaged in a business other than that of an investment company and, therefore, not an investment company within the meaning of the Investment Company Act. We intend to conduct our operations and maintain our investments in a manner, and will take appropriate actions as necessary, to ensure we will not be deemed to be an investment company in the future. The Commission, however, upon its motion or upon application, may find that the circumstances that gave rise to the issuance of the order no longer exist, and as a result may revoke such order. There can be no assurance that such order will not be revoked.

Factors Relating to Peru

Exposure to Peruvian Political Risk

All of our and Yanacocha's operations are conducted in Peru. Accordingly, our and Yanacocha's business, financial condition or results of operations could be affected by changes in economic or other policies of the Peruvian government or other political, regulatory or economic developments in Peru.

During the past several decades, Peru has had a history of political instability that has included military coups and a succession of regimes with differing policies and programs. Past governments have frequently played an interventionist role in the nation's economy and social structure. Among other things, past governments have imposed controls on prices, exchange rates and local and foreign investment as well as on limitations on imports, have restricted the ability of companies to dismiss employees, have expropriated private sector assets (including mining companies) and have prohibited the remittance of profits to foreign investors.

During the 1980s, government policies restricted our ability, among other things, to repatriate funds and import products from abroad. In addition, currency exchange rates were strictly controlled, and all export sales were required to be deposited in Peru's Banco Central de Reserva, or Central Bank, where they were exchanged from U.S. Dollars to Peruvian currency at less-than-favorable rates of exchange. These policies generally affected our results of operations. Controls on repatriation of funds limited the ability of our shareholders to receive dividends outside of Peru, but did not limit the ability of our shareholders to receive distributions of earnings in Peru. See "Item 10. Additional Information-Exchange Controls".

In July 1990, Alberto Fujimori was elected president of Peru, and his administration implemented a broad-based reform of Peru's political system, economy and social conditions, aimed at stabilizing the economy, restructuring the national government by reducing bureaucracy, privatizing state-owned companies, promoting private investment, developing and strengthening free markets, institutionalizing democratic representation and enacting programs for the strengthening of basic services related to education, health, housing and infrastructure. However, after Fujimori's reelection to his third five-year term of office on May 29, 2000, Fujimori resigned his post amid increasing social pressure. The Peruvian Congress appointed Valentin Paniagua as interim President. New elections were subsequently held on April 8, 2001 and a run-off election was held on June 3, 2001, in which Alejandro Toledo was elected President. President Toledo's government has largely retained the economic policies of the previous government, focusing on promoting private investment, privatizing state-owned companies in various sectors including energy, mining and public services.

The political and economic impact of the upcoming Peruvian presidential and congressional elections is uncertain. At the elections held on April 9, 2006, no presidential candidate received the required 50 percent or more of the votes. As a result, a second round election between the top two presidential candidates, Ollanta Humala Tasso from the *Partido Union por el Peru*, or the UPP, and Alan Garcia Perez of the *Partido Alianza Popular Revolucionaria*, or APRA, will be held on June 4, 2006. The outcome of these elections as well as the economic policies of the new government are uncertain. Despite the uncertainty of the electoral outcome, the next president will not likely have a majority in Congress.

Risks of Inflation, Reduced Economic Growth and Currency Devaluation

Over the past several decades, Peru has experienced periods of high inflation, slow or negative economic growth and substantial currency devaluation. The inflation rate in Peru, as measured by the *Indice de Precios al Consumidor*, or IPC, and published by INEI, has fallen from a high of 7,649.7 percent in 1990 to -0.1 percent in 2001, 1.5 percent in 2002, 2.5 percent in 2003, 3.5 percent in 2004 and 1.5 percent in 2005. The Peruvian currency has been devalued numerous times during the last 20 years. The devaluation rate has decreased from a high of 4,019.3 percent in 1990 to 2.3 percent in 2001, 2.0 percent in 2002, 1.5 percent in 2003, 5.2 percent in 2004 and 4.5 percent in 2005. Our revenues and operating expenses are primarily denominated in U.S. Dollars. If inflation in Peru were to increase without a corresponding devaluation of the Nuevo Sol relative to the U.S. Dollar, our financial position and results of operations, and the market price of our Common Shares and American Depositary Shares, or ADSs, could be affected. Although the Peruvian government's stabilization plan has significantly reduced inflation, and the Peruvian economy has experienced strong growth in recent years, there can be no assurance that inflation will not increase from its current level or that such growth will continue in the future at similar rates or at all.

Among the economic circumstances that could lead to a devaluation would be the decline of Peruvian foreign reserves to inadequate levels. Peru's foreign reserves at December 31, 2005 were US\$14.1 billion as compared to US\$12.6 billion at December 31, 2004. Although actual foreign reserves must be maintained at levels that will allow the succeeding government the ability to manage the Peruvian economy and to assure monetary stability in the near future, there can be no assurance that Peru will be able to maintain adequate foreign reserves to meet its foreign currency denominated obligations, or that Peru will not devalue its currency should its foreign reserves decline. See "Item 3. Key Information-Exchange Rates".

Peru's current account deficit is being funded partially by foreign direct investment. There can be no assurance that foreign direct investment will continue at

current levels, particularly if adverse political or economic developments in Peru arise, a development that may also contribute to devaluation pressure.

Deterioration in Economic and Market Conditions in Latin America and Other Emerging Market Countries

The market for securities issued by Peruvian companies is influenced by economic and market conditions in Peru and, to varying degrees, market conditions in other Latin American and emerging market countries. Although economic conditions are different in each country, the reaction of investors to developments in one country is likely to cause the capital markets in other countries to fluctuate. For example, political and economic events, such as the crises in Venezuela, Ecuador, Bolivia, Brazil and Argentina, have influenced investors' perceptions of risk with regards to Peru. The negative investor reaction to developments in our neighboring countries may adversely affect the market for securities issued by countries in the region, cause foreign investors to decrease the flow of capital into Latin America, and introduce uncertainty about plans for further integration of regional economies.

Exchange and Investment Controls

Peruvian law currently imposes no restrictions on the ability of companies operating in Peru to transfer foreign currency from Peru to other countries, to convert Peruvian currency into foreign currency or foreign currency into Peruvian currency or to remit dividends abroad or on the ability of foreign investors to liquidate their investment and repatriate their capital. Prior to 1991, Peru had restrictive exchange controls and exchange rates. During the latter part of the 1980s, exchange restrictions prevented payment of dividends to our shareholders in the United States in U.S. Dollars. Accordingly, should such or similar controls be instituted, dividends paid to holders of Common Shares and, consequently, holders of American Depositary Receipts, or ADRs, could be affected. There can be no assurance that the Peruvian government will continue to permit such transfers, remittances or conversion without restriction. See "Item 10. Additional Information-Exchange Controls".

Corporate Disclosure and Accounting Standards

We prepare our financial statements using Peruvian GAAP, which differs in certain material respects from U.S. GAAP. Thus, the presentation of Peruvian financial statements and reported earnings may not be comparable to those companies whose financial statements are prepared in accordance with U.S. GAAP. See Note 38 to the Financial Statements for a description of the significant differences between Peruvian GAAP and U.S. GAAP, as such differences relate to us, and Note 39 for a reconciliation to U.S. GAAP of our net income and shareholders' equity for the period included therein. In addition, as a foreign private issuer in the United States, we have less intensive reporting requirements and information regarding us may not be as readily disseminated into the market.

Enforceability of Civil Liabilities

We are organized under the laws of Peru. A significant majority of our directors and officers reside outside the United States (principally in Peru). All or a substantial portion of our assets or the assets of such persons are located outside the United States. As a result, it may not be possible for investors to effect service of process within the United States upon us or upon such persons or to enforce against them in federal or state courts in the United States judgments predicated upon the civil liability provisions of the federal securities laws of the United States. We have been advised by our Peruvian counsel, that there is uncertainty as to the enforceability, in original actions in Peruvian courts, of liabilities predicated solely under the United States federal securities laws and as to the enforceability in Peruvian courts of judgments of United States courts obtained in actions predicated upon the civil liability provisions of the United States federal securities laws.

Factors Relating to the Common Shares and ADSs

Voting Rights; Effective Control by Principal Shareholders

The aggregate percentage of the economic interest of our outstanding share capital held by Alberto Benavides de la Quintana, our Chairman and former Chief Executive Officer, and certain members of his immediate and extended family and their spouses, or the Benavides Family, as of April 30, 2006, was 27.24 percent. Because of the significant ownership interest the Benavides Family holds in common shares and because the Investment Shares held by others do not have voting rights, the Benavides Family has the power to elect a significant number of the outstanding directors and has a significant influence over the outcome of substantially all matters to be decided by a vote of shareholders. In addition, under the terms of the Amended and Restated Deposit Agreement dated May 3, 2002, as further amended and restated as of November 12, 2003, among us, The Bank of New York, as depositary, or the Depositary, and the owners and beneficial owners of ADSs, or the Amended and Restated Deposit Agreement, relating to our ADSs, if holders of ADSs do not provide the Depositary with timely instructions for the voting of Common Shares represented by such ADRs, the Depositary will be deemed to be instructed to give a person designated by us, which will likely be Alberto Benavides de la Quintana, a discretionary proxy to vote such shares, unless we inform the Depositary that we do not wish such proxy to be given.

Fewer and Less Well Defined Shareholders' Rights

Our shareholders have fewer and less well-defined rights under applicable Peruvian law than they might have as shareholders of a corporation incorporated in a jurisdiction of the United States or certain other countries.

Shares Eligible for Future Sale

Sales of a substantial number of our shares by Alberto Benavides de la Quintana and certain other members of the Benavides Family could materially and adversely affect prevailing market prices for the Common Shares and ADSs. There is no contractual restriction on the disposition of shares of our share capital by our shareholders, including the Benavides Family. Furthermore, under the *Ley General de Sociedades Peruana*, or Peruvian Companies Law, any restriction on the free sale of shares in a *sociedad anónima abierta* (open stock company) such as we are, is null and void.

Possible Inability of ADS Holders to Exercise Preemptive Rights

Holders of the ADSs are, under Peruvian law, entitled to exercise preemptive rights and accretion rights on the Common Shares underlying the ADSs in the event of any future capital increase by us unless (x) the increase is approved, expressly stating that the shareholders have no preemptive rights to subscribe and pay for the Shares to be issued in such increase, by holders of Common Shares, holding at least 40 percent of the Common Shares, at a properly called meeting with a proper quorum and (y) the increase is not designed to improve directly or indirectly the shareholding of any shareholder. However, United States holders of ADSs may not be able to exercise through the Depositary for the ADSs the preemptive rights and accretion rights for Common Shares underlying their ADSs unless a registration statement under the Securities Act of 1933, as amended, or the Securities Act, is effective with respect to such rights or an exemption from the registration requirement thereunder is available. Any such rights offering would have a dilutive effect upon shareholders who are unable or unwilling to exercise their rights. We intend to evaluate, at the time of any rights offering, the costs and potential liabilities associated with any registration statement as well as the benefits to it of enabling the holders of ADSs to exercise such rights and will then make a decision as to whether to file such a registration statement. Therefore, no assurance can be given that any such registration statement would be filed. To the extent that holders of ADSs are unable to exercise such rights because a registration statement has not been filed and no exemption from such registration statement under the Securities Act is available, the Depositary will, to the extent practicable, sell such holders' preemptive rights or accretion rights and distribute the net proceeds thereof, if any, to the holders of ADSs and such holders' equity interest in us would be diluted proportionately. The Depositary has discretion to make rights available to holders of ADSs or to dispose of such rights and to make any net proceeds available to such holders. If, by the terms of any rights offering or for any other reason, the Depositary is not able to make such rights or such net proceeds available to any holder of ADSs, the Depositary may allow the rights to lapse.

ITEM 4. Information on the Company

THE COMPANY

History and Development

Overview

We are Peru's largest publicly-traded precious metals company, and are engaged in the exploration, mining and processing of gold, silver and, to a lesser extent, other metals, in Peru. We currently operate the Julcani, Recuperada, Orcopampa and Uchucchacua mines and have controlling interests in three other mining companies which operate the Colquijirca, Antapite, Ishihuinca and Shila-Paula mines. Effective March 2001, we temporarily suspended operations and discontinued exploration efforts at the Recuperada mine. In April 2004, we elected to resume exploration efforts at the Esperanza vein of the Recuperada mine due to an increase in ore reserves as well as the rising price of metals and in February 2006 we initiated mining operations. In addition, as of January 1, 2005, the operating data from the Paula mine has been consolidated with the operating data from the Shila mine and after such date is referred to herein as the Shila-Paula mine. We also own an electric power transmission company and an engineering services consulting company and have minority interests in several other mining companies, including a significant ownership interest in Yanacocha, a Peruvian partnership that operates South America's largest gold mine, and Sociedad Minera Cerro Verde S.A.A., or Cerro Verde, a Peruvian company that operates a copper mine located in the south of Peru. In 2005, the Julcani, Uchucchacua, Orcopampa, Antapite, Colquijirca, Ishihuinca and Shila-Paula mines produced 388,042 ounces of gold, 16,429,816 ounces of silver and 69,550 short tons of metallic zinc. Yanacocha produced 3,333,088 ounces of gold and 4,342,292 ounces of silver and Cerro Verde produced 103,123 short tons of copper. Our equity share of production in 2005 was 1,814,861 ounces of gold, 15,377,704 ounces of silver, 28,154 short tons of metallic zinc and 15,220 short tons of copper, including 1,454,893 ounces of gold and 1,895,410 ounces of silver for Yanacocha and 15,066 short tons of copper for Cerro Verde. For the year ended December 31, 2005, our net sales were S/.936.5 million (US\$273.0 million), and our net income was S/.940.9 million (US\$274.3 million).

Compañía de Minas Buenaventura S.A.A., a *sociedad anónima abierta* (open stock company) under the laws of Peru, was originally established in 1953 as a *sociedad anónima* (company) under the laws of Peru, and currently operates under the laws of Peru. Our registered office is located at Carlos Villarán 790, Santa Catalina, Lima 13, Perú, telephone no. 5-11-419-2538. Our Internet Website address is <http://www.buenaventura.com>. The information on our website is not a part of, and is not incorporated into, this document.

History

During our first 25 years, our efforts focused on the exploration of silver mines. During this period, we built up our principal mines in Peru, commencing with the acquisition of the Julcani mine in 1953. We commenced exploration of the Orcopampa mine in 1962 and operations in 1965. We began exploring the Uchucchacua mine site in 1960 and, after operating a pilot project in the area in the early 1970s with successful results, built an ore processing plant at the mine site, which began operations in 1975.

Because of political uncertainties in Peru in the mid-1970s, we explored mining possibilities in other countries in South America, including Colombia, Ecuador, Venezuela, Bolivia and Argentina. Exploration began on a small scale at the Toachi mine near Quito, Ecuador, but this project was discontinued in 1981 due to border disputes between Peru and Ecuador. At that time, we also decided to discontinue our exploration outside Peru and to intensify efforts in Peru.

Following a sharp increase in silver prices, which peaked in 1980, we initiated a program to explore for gold and, to a lesser extent, other metals in Peru to reduce our dependence on silver, since we believed the high price of silver could not be sustained. Faced with declining silver prices throughout the 1980s, we expanded silver output to reduce cash flow while at the same time continuing our exploration efforts for other metals. Exploration of gold anomalies in the Yanacocha district began in 1983 and an expansion of the Orcopampa mine, which had operated since 1967 as a silver-producing mine, to enable us to explore newly-discovered gold veins began in 1984 and was concluded in 1999. In 2002, after an intense exploration program of the Orcopampa mine, gold production was commenced in the Chipmo area. New
