Internal control and risk factors

Disclosure controls

Working with management, including the Chief Executive and Finance Director, we have evaluated the effectiveness of the design and operation of our disclosure controls and procedures as at 31 March 2016. Our disclosure controls and procedures are designed to provide reasonable assurance of achieving their objectives. However, the effectiveness of any system of disclosure controls and procedures has limitations, including the possibility of human error and the circumvention or overriding of the controls and procedures.

Even effective disclosure controls and procedures provide only reasonable assurance of achieving their objectives. Based on the evaluation, the Chief Executive and Finance Director concluded that the disclosure controls and procedures are effective to provide reasonable assurance that information required to be disclosed in the reports that we file and submit under the Exchange Act is recorded, processed, summarised and reported as and when required and that such information is accumulated and communicated to our management, including the Chief Executive and Finance Director, as appropriate, to allow timely decisions regarding disclosure.

Internal control over financial reporting

Our management, including the Chief Executive and Finance Director, has carried out an evaluation of our internal control over financial reporting pursuant to the Disclosure Rules and Transparency Rules and Section 404 of the Sarbanes-Oxley Act 2002. As required by Section 404, management is responsible for establishing and maintaining an adequate system of internal control over financial reporting (as defined in Rules 13a-15(f) and 15d-15(f) under the Exchange Act).

Our internal control over financial reporting is designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Management evaluation of the effectiveness of the Company's internal control over financial reporting was based on the revised Internal Control-Integrated Framework (2013) issued by the Committee of Sponsoring Organizations of the Treadway Commission. Based on this evaluation, management concluded that our internal control over financial reporting was effective as at 31 March 2016.

PricewaterhouseCoopers LLP, which has audited our consolidated financial statements for the year ended 31 March 2016, has also audited the effectiveness of our internal control over financial reporting. Their attestation report can be found on page 93.

During the year, there were no changes in our internal control over financial reporting that have materially affected, or are reasonably likely to materially affect, it.

Risk factors

Management of our risks is an important part of our internal control environment, as we describe on pages 26 to 29. In addition to the principal risks listed we face a number of inherent risks that could have a material adverse effect on our business, financial condition, results of operations and reputation, as well as the value and liquidity of our securities.

Any investment decision regarding our securities and any forward-looking statements made by us should be considered in the light of these risk factors and the cautionary statement set out on the inside back cover. An overview of the key inherent risks we face is provided below.

Risk factors

Potentially harmful activities

Aspects of the work we do could potentially harm employees, contractors, members of the public or the environment.

Potentially hazardous activities that arise in connection with our business include the generation, transmission and distribution of electricity and the storage, transmission and distribution of gas.

Electricity and gas utilities also typically use and generate hazardous and potentially hazardous products and by-products. In addition, there may be other aspects of our operations that are not currently regarded or proved to have adverse effects but could become so, such as the effects of electric and magnetic fields.

A significant safety or environmental incident, or the failure of our safety processes or of our occupational health plans, as well as the breach of our regulatory or contractual obligations or our climate change targets, could materially adversely affect our results of operations and our reputation.

We commit significant resources and expenditure to process safety and to monitoring personal safety, occupational health and environmental performance, and to meeting our obligations under negotiated settlements.

We are subject to laws and regulations in the UK and US governing health and safety matters to protect the public and our employees and contractors, who could potentially be harmed by these activities as well as laws and regulations relating to pollution, the protection of the environment, and the use and disposal of hazardous substances and waste materials.

These expose us to costs and liabilities relating to our operations and properties, including those inherited from predecessor bodies, whether currently or formerly owned by us, and sites used for the disposal of our waste.

The cost of future environmental remediation obligations is often inherently difficult to estimate and uncertainties can include the extent of contamination, the appropriate corrective actions and our share of the liability. We are increasingly subject to regulation in relation to climate change and are affected by requirements to reduce our own carbon emissions as well as to enable reduction in energy use by our customers.

If more onerous requirements are imposed or our ability to recover these costs under regulatory frameworks changes, this could have a material adverse impact on our business, reputation, results of operations and financial position.

Internal control and risk factors continued

Infrastructure and IT systems

We may suffer a major network failure or interruption, or may not be able to carry out critical operations due to the failure of infrastructure, data or technology or a lack of supply.

Operational performance could be materially adversely affected by a failure to maintain the health of our assets or networks, inadequate forecasting of demand, inadequate record keeping or control of data or failure of information systems and supporting technology.

This in turn could cause us to fail to meet agreed standards of service, incentive and reliability targets, or be in breach of a licence, approval, regulatory requirement or contractual obligation. Even incidents that do not amount to a breach could result in adverse regulatory and financial consequences, as well as harming our reputation.

Where demand for electricity or gas exceeds supply and our balancing mechanisms are not able to mitigate this fully, a lack of supply to consumers may damage our reputation.

In addition to these risks, we may be affected by other potential events that are largely outside our control, such as the impact of weather (including as a result of climate change and major storms), unlawful or unintentional acts of third parties, insufficient or unreliable supply or force majeure.

Weather conditions can affect financial performance and severe weather that causes outages or damages infrastructure together with our actual or perceived response could materially adversely affect operational and potentially business performance and our reputation.

Malicious attack, sabotage or other intentional acts, including breaches of our cyber security, may also damage our assets (which include critical national infrastructure) or otherwise significantly affect corporate activities and, as a consequence, have a material adverse impact on our reputation, business, results of operations and financial condition.

Unauthorised access to private customer information may make us liable for a violation of data privacy regulations. Even where we establish business continuity controls and security against threats against our systems, these may not be sufficient.

Law and regulation

Changes in law or regulation or decisions by governmental bodies or regulators could materially adversely affect us.

Most of our businesses are utilities or networks subject to regulation by governments and other authorities. Changes in law or regulation or regulatory policy and precedent, including decisions of governmental bodies or regulators, in the countries or states in which we operate could materially adversely affect us.

If we fail to engage in the energy policy debate, we may not be able to influence future energy policy and deliver our strategy.

Decisions or rulings concerning, for example:

- (i) whether licences, approvals or agreements to operate or supply are granted, amended or renewed, whether consents for construction projects are granted in a timely manner or whether there has been any breach of the terms of a licence, approval or regulatory requirement; and
- (ii) timely recovery of incurred expenditure or obligations, the ability to pass through commodity costs, a decoupling of energy usage and revenue, and other decisions relating to the impact of general economic conditions on us, our markets and customers, implications of climate change and of advancing energy

technologies, whether aspects of our activities are contestable, the level of permitted revenues and dividend distributions for our businesses and in relation to proposed business development activities,

could have a material adverse impact on our results of operations, cash flows, the financial condition of our businesses and the ability to develop those businesses in the future.

Following the introduction of EMR, there has been an increased focus (from some of our stakeholders) on the potential conflicting duties of our transmission and system operator roles, which may damage our reputation.

The remediation plans in place or being implemented to address control weaknesses in our US business may not operate as expected, as a result of which we may be unable to provide timely regulatory reporting, which may include the provision of financial statements. This could result in the imposition of regulatory fines, penalties and other sanctions, which could impact our operations, our reputation and our relationship with our regulators and other stakeholders.

For further information see pages 176 to 182, which explain our regulatory environment in detail.

Business performance

Current and future business performance may not meet our expectations or those of our regulators and shareholders.

Earnings maintenance and growth from our regulated gas and electricity businesses will be affected by our ability to meet or exceed efficiency targets and service quality standards set by, or agreed with, our regulators.

If we do not meet these targets and standards, or if we do not implement the transformation projects we are carrying out as envisaged, including to our US enterprise resource planning systems and controls over financial reporting, or are not able to deliver our RIIO operating model and the US rate plans strategy successfully, we may not achieve the expected benefits, our business may be materially adversely affected and our performance, results of operations and reputation may be materially harmed and we may be in breach of regulatory or contractual obligations.

Growth and business development activity

Failure to respond to external market developments and execute our growth strategy may negatively affect our performance. Conversely, new businesses or activities that we undertake alone or with partners may not deliver target outcomes and may expose us to additional operational and financial risk.

Failure to grow our core business sufficiently and have viable options for new future business over the longer term or failure to respond to the threats and opportunities presented by emerging technology (including for the purposes of adapting our networks to meet the challenges of increasing distributed energy resources) could negatively affect the Group's credibility and reputation and jeopardise the achievement of intended financial returns.

Our business development activities and the delivery of our growth ambition, include acquisitions, disposals, joint ventures, partnering and organic investment opportunities such as development activities relating to changes to the energy mix and the integration of distributed energy resources and other advanced technologies. These are subject to a wide range of both external uncertainties (including the

availability of potential investment targets and attractive financing and the impact of competition for onshore transmission in both the UK and US) and internal uncertainties (including actual performance of our existing operating companies and our business planning model assumptions and ability to integrate acquired businesses effectively). As a result, we may suffer unanticipated costs and liabilities and other unanticipated effects.

We may also be liable for the past acts, omissions or liabilities of companies or businesses we have acquired, which may be unforeseen or greater than anticipated. In the case of joint ventures, we may have limited control over operations and our joint venture partners may have interests that diverge from our own.

The occurrence of any of these events could have a material adverse impact on our results of operations or financial condition, and could also impact our ability to enter into other transactions.

Cost escalation

Changes in foreign currency rates, interest rates or commodity prices could materially impact earnings or our financial condition. We have significant operations in the US and so are subject to the exchange rate risks normally associated with non UK operations, including the need to translate US assets and liabilities, and income

and expenses, into sterling, our primary reporting currency.

In addition, our results of operations and net debt position may be affected because a significant proportion of our borrowings, derivative financial instruments and commodity contracts are

affected by changes in interest rates, commodity price indices and exchange rates, in particular the dollar to sterling exchange rate.

Furthermore, our cash flow may be materially affected as a result of settling hedging arrangements entered into to manage our exchange rate, interest rate and commodity price exposure, or by cash collateral movements relating to derivative market values, which also depend on the sterling exchange rate into euro and other currencies.

Our results of operations could be affected by inflation or deflation. In our regulated UK networks, our allowed revenues are set in real terms and then adjusted for actual RPI inflation. There is a risk that inflationary impacts on our costs are higher than RPI inflation and are not fully compensated by this inflation adjustment to revenues. There is also a risk that year-on-year RPI inflation is negative with no corresponding decrease in costs or insufficient decrease to offset the impact on revenues.

Our income under our rate plans in the US is not typically linked to inflation. In periods of inflation in the US, our operating costs may increase by more than our revenues. In both the UK and US such increased costs may materially adversely affect the results of our operations.

We may be required to make significant contributions to fund pension and other post-retirement benefits.

We participate in a number of pension schemes that together cover substantially all our employees. In both the UK and US, the principal schemes are DB schemes where the scheme assets are held independently of our own financial resources.

In the US, we also have other post-retirement benefit schemes. Estimates of the amount and timing of future funding for the UK and US schemes are based on actuarial assumptions and other factors, including: the actual and projected market performance of the scheme assets; future long-term bond yields; average life expectancies; and relevant legal requirements.

Actual performance of scheme assets may be affected by volatility in debt and equity markets.

Changes in these assumptions or other factors may require us to make additional contributions to these pension schemes which, to the extent they are not recoverable under our price controls or state rate plans, could materially adversely affect the results of our operations and financial condition.

Internal control and risk factors continued

Financing and liquidity

An inability to access capital markets at commercially acceptable interest rates could affect how we maintain and grow our businesses. Our businesses are financed through cash generated from our ongoing operations, bank lending facilities and the capital markets, particularly the long-term debt capital markets.

Some of the debt we issue is rated by credit rating agencies and changes to these ratings may affect both our borrowing capacity and borrowing costs. In addition, restrictions imposed by regulators may also limit how we service the financial requirements of our current businesses or the financing of newly acquired or developing businesses.

Financial markets can be subject to periods of volatility and shortages of liquidity. If we were unable to access the capital markets or other sources of finance at competitive rates for a prolonged period, our cost of financing may increase, the discretionary and uncommitted elements of our proposed capital investment programme may need to be reconsidered and the manner in which we implement our strategy may need to be reassessed.

Such events could have a material adverse impact on our business, results of operations and prospects.

Some of our regulatory agreements impose lower limits for the long-term senior unsecured debt credit ratings that certain companies within the Group must hold or the amount of equity within their capital structures.

One of the principal limits requires National Grid plc to hold an investment grade long-term senior unsecured debt credit rating. In addition, some of our regulatory arrangements impose restrictions on the way we can operate.

These include regulatory requirements for us to maintain adequate financial resources within certain parts of our operating businesses and may restrict the ability of National Grid plc and some of our subsidiaries to engage in certain transactions, including paying dividends, lending cash and levying charges.

The inability to meet such requirements or the occurrence of any such restrictions may have a material adverse impact on our business and financial condition.

The remediation plans in place or being implemented to address control weaknesses in our US business may not operate as expected, as a result of which we may be unable to provide accurate financial information to our debt investors in a timely manner.

Our debt agreements and banking facilities contain covenants, including those relating to the periodic and timely provision of financial information by the issuing entity and financial covenants, such as restrictions on the level of subsidiary indebtedness.

Failure to comply with these covenants, or to obtain waivers of those requirements, could in some cases trigger a right, at the lender's discretion, to require repayment of some of our debt and may restrict our ability to draw upon our facilities or access the capital markets.

Customers and counterparties

Customers and counterparties may not perform their obligations. Our operations are exposed to the risk that customers, suppliers, banks and other financial institutions and others with whom we do business will not satisfy their obligations, which could materially adversely affect our financial position.

This risk is significant where our subsidiaries have concentrations of receivables from gas and electricity utilities and their affiliates, such as from our previous LIPA managed services agreement (MSA) and current PSEG-LI transition services agreement, as well as industrial customers and other purchasers, and may also arise where customers are unable to pay us as a result of increasing commodity prices or adverse economic conditions.

To the extent that counterparties are contracted with for physical commodities (gas and electricity) and they experience events that impact their own ability to deliver, we may suffer supply interruption as described in Infrastructure and IT systems on page 184.

There is also a risk to us where we invest excess cash or enter into derivatives and other financial contracts with banks or other financial institutions. Banks who provide us with credit facilities may also fail to perform under those contracts.

Employees and others

We may fail to attract, develop and retain employees with the competencies, including leadership and business capabilities, values and behaviours required to deliver our strategy and vision and ensure they are engaged to act in our best interests.

Our ability to implement our strategy depends on the capabilities and performance of our employees and leadership at all levels of the business. Our ability to implement our strategy and vision may be negatively affected by the loss of key personnel or an inability to attract, integrate, engage and retain appropriately qualified personnel, or if significant disputes arise with our employees.

As a result, there may be a material adverse effect on our business, financial condition, results of operations and prospects.

There is a risk that an employee or someone acting on our behalf may breach our internal controls or internal governance framework or may contravene applicable laws and regulations. This could have an impact on the results of our operations, our reputation and our relationship with our regulators and other stakeholders.

Shareholder information

Articles of Association

The following description is a summary of the material terms of our Articles and applicable English law. It is a summary only and is qualified in its entirety by reference to the Articles.

Summary

The Articles set out the Company's internal regulations. Copies are available on our website and upon request. Amendments to the Articles have to be approved by at least 75% of those voting at a general meeting of the Company. Subject to company law and the Articles, the Directors may exercise all the powers of the Company. They may delegate authorities to committees and day-to-day management and decision-making to individual Executive Directors. The committee structure is set out on page 49.

General

The Company is incorporated under the name National Grid plc and is registered in England and Wales with registered number 04031152. Under the Companies Act 2006, the Company's objects are unrestricted.

Directors

Under the Articles, a Director must disclose any personal interest in a matter and may not vote in respect of that matter, subject to certain limited exceptions. As permitted under the Companies Act 2006, the Articles allow non conflicted Directors of the Company to authorise a conflict or potential conflict for a particular matter. In doing so, the non conflicted Directors must act in a way they consider, in good faith, will be most likely to promote the success of the Company for the benefit of the shareholders as a whole.

The Directors (other than a Director acting in an executive capacity) are paid fees for their services. In total, these fees must not exceed £2,000,000 a year or any higher sum decided by an ordinary resolution at a general meeting of shareholders. In addition, special pay may be awarded to a Director who acts in an executive capacity, serves on a committee, performs services which the Directors consider to extend beyond the ordinary duties of a Director, devotes special attention to the business of National Grid, or goes or lives abroad on the Company's behalf. Directors may also receive reimbursement for expenses properly incurred, and may be awarded pensions and other benefits. The compensation awarded to the Executive Directors is determined by the Remuneration Committee. Further details of Directors' remuneration are set out in the Directors' Remuneration Report (see page 68 to 81).

The Directors may exercise all the powers of National Grid to borrow money. However, the aggregate principal amount of all the Group's borrowings outstanding at any time must not exceed £35 billion or any other amount approved by shareholders by an ordinary resolution at a general meeting.

Directors can be appointed or removed by the Board or shareholders in a general meeting. Directors must stand for election at the first AGM following their appointment to the Board. Each Director must retire at least every three years, although they will be eligible for reelection. In accordance with best practice introduced by the UK Corporate Governance Code, all Directors wishing to continue in office currently offer themselves for re-election annually. No person is disqualified from being a Director or is required to vacate that office by reason of attaining a maximum age.

A Director is not required to hold shares in National Grid in order to qualify as a Director.

Rights, preferences and restrictions

(i) Dividend rights

National Grid may not pay any dividend otherwise than out of profits available for distribution under the Companies Act 2006 and other applicable provisions of English law. In addition, as a public company, National Grid may only make a distribution if, at the time of the distribution, the amount of its net assets is not less than the aggregate of its called up share capital and undistributable reserves (as defined in the Companies Act 2006) and to the extent that the distribution does not reduce the amount of those assets to less than that aggregate. Ordinary shareholders and ADS holders receive dividends.

Subject to these points, shareholders may, by ordinary resolution, declare dividends in accordance with the respective rights of the shareholders, but not exceeding the amount recommended by the Board. The Board may pay interim dividends if it considers that National Grid's financial position justifies the payment. Any dividend or interest unclaimed for 12 years from the date when it was declared or became due for payment will be forfeited and revert to National Grid.

(ii) Voting rights

Subject to any rights or restrictions attached to any shares and to any other provisions of the Articles, at any general meeting on a show of hands, every shareholder who is present in person will have one vote and on a poll, every shareholder will have one vote for every share they hold. On a show of hands or poll, shareholders may cast votes either personally or by proxy. A proxy need not be a shareholder. Under the Articles, all substantive resolutions at a general meeting must be decided on a poll. Ordinary shareholders and ADS holders can vote at general meetings.

(iii) Liquidation rights

In a winding up, a liquidator may (in each case with the sanction of a special resolution passed by the shareholders and any other sanction required under English law): (a) divide among the shareholders the whole or any part of National Grid's assets (whether the assets are of the same kind or not); the liquidator may, for this purpose, value any assets and determine how the division should be carried out as between shareholders or different classes of shareholders, or (b) transfer any part of the assets to trustees on trust for the benefit of the shareholders as the liquidator determines. In neither case will a shareholder be compelled to accept assets upon which there is a liability.

(iv) Restrictions

There are no restrictions on the transfer or sale of ordinary shares. Some of the Company's employee share plans, details of which are contained in the Directors' Remuneration Report, include restrictions on the transfer of shares while the shares are subject to the plan. Where, under an employee share plan operated by the Company, participants are the beneficial owners of the shares but not the registered owner, the voting rights may be exercised by the registered owner at the direction of the participant. Treasury shares do not attract a vote or dividends.

Variation of rights

Subject to applicable provisions of English law, the rights attached to any class of shares of National Grid may be varied or cancelled. This must be with the written consent of the holders of three quarters in nominal value of the issued shares of that class, or with the sanction of a special resolution passed at a separate meeting of the holders of the shares of that class.

Shareholder information continued

General meetings

AGMs must be convened each year within six months of the Company's accounting reference date upon 21 clear days' advance written notice. Under the Articles, any other general meeting may be convened provided at least 14 clear days' written notice is given, subject to annual approval of shareholders. In certain limited circumstances, the Company can convene a general meeting by shorter notice. The notice must specify, among other things, the nature of the business to be transacted, the place, the date and the time of the meeting.

Rights of non residents

There are no restrictions under the Articles that would limit the rights of persons not resident in the UK to vote in relation to ordinary shares.

Disclosure of interests

Under the Companies Act 2006, National Grid may, by written notice, require a person whom it has reasonable cause to believe to be or to have been, in the last three years, interested in its shares to provide additional information relating to that interest. Under the Articles, failure to provide such information may result in a shareholder losing their rights to attend, vote or exercise any other right in relation to shareholders' meetings.

Under the UK Disclosure Rules and Transparency Rules, there is also an obligation on a person who acquires or ceases to have a notifiable interest in shares in National Grid to notify the Company of that fact. The disclosure threshold is 3% and disclosure is required each time the person's direct and indirect holdings reach, exceed or fall below each 1% threshold thereafter.

The UK City Code on Takeovers and Mergers imposes strict disclosure requirements with regard to dealings in the securities of an offeror or offeree company, and also on their respective associates, during the course of an offer period. Other regulators in the UK, US and elsewhere may have, or assert, notification or approval rights over acquisitions or transfers of shares.

Depositary payments to the Company

The Depositary reimburses the Company for certain expenses it incurs in relation to the ADS programme. The Depositary also pays the standard out-of-pocket maintenance costs for the ADSs, which consist of the expenses for the mailing of annual and interim financial reports, printing and distributing dividend cheques, electronic filing of $\ensuremath{\mathsf{US}}$ federal tax information, mailing required tax forms, stationery, postage, facsimile and telephone calls. It also reimburses the Company for certain investor relationship programmes or special investor relations promotional activities. There are limits on the amount of expenses for which the Depositary will reimburse the Company, but the amount of reimbursement is not necessarily tied to the amount of fees the Depositary collects from investors. For the period 1 April 2015 to 18 May 2016, the Company received a total of \$1,948,523.97 in reimbursements from the Depositary consisting of \$1,277,966.88 and \$670,557.09 received in October 2015 and February 2016 respectively. Fees that are charged on cash dividends will be apportioned between the Depositary and the Company, see below.

Any questions from ADS holders should be directed to The Bank of New York Mellon at the contact details on page 207.

Description of securities other than equity securities: depositary fees and charges

The Bank of New York Mellon, as the Depositary, collects fees, by deducting those fees from the amounts distributed or by selling a portion of distributable property, for:

- delivery and surrender of ADSs directly from investors depositing shares or surrendering ADSs for the purpose of withdrawal or from intermediaries acting for them; and
- making distributions to investors (including, it is expected, cash dividends).

withdrawing shares must pay:	For
\$5.00 per 100 ADSs (or portion of 100 ADSs)	Issuance of ADSs, including issuances resulting from a distribution of shares or rights or other property; cancellation of ADSs for the purpose of withdrawal, including if the Deposit Agreement terminates; and distribution of securities distributed to holders of deposited securities that are distributed by the Depositary to ADS holders.
Registration or transfer fees	Transfer and registration of shares on our share register to or from the name of the Depositary or its agent when they deposit or withdraw shares.
Expenses of the Depositary	Cable, telex and facsimile transmissions (when expressly provided in the Deposit Agreement); and converting foreign currency to dollars.
Taxes and other governmental charges the Depositary or the Custodian has to pay on any ADS or share underlying an ADS, for example, stock transfer taxes, stamp duty or withholding taxes	As necessary.

The Company's Deposit Agreement under which the ADSs are issued allows a fee of up to \$0.05 per ADS to be charged for any cash distribution made to ADS holders, including cash dividends. ADS holders who receive cash in relation to the 2015/16 final dividend will be charged a fee of \$0.02 per ADS by the Depositary prior to distribution of the cash dividend.

Documents on display

National Grid is subject to the filing requirements of the Exchange Act, as amended. In accordance with these requirements, we file reports and other information with the SEC. These materials, including this document, may be inspected during normal business hours at our registered office 1-3 Strand, London WC2N 5EH or at the SEC's Public Reference Room at 100 F Street, NE, Washington, DC 20549. For further information about the Public Reference Room, please call the SEC at 1-800-SEC-0330. Some of our filings are also available on the SEC's website at www.sec.gov.

Events after the reporting period

There have been no material events affecting the Company since the year end.

Exchange controls

There are currently no UK laws, decrees or regulations that restrict the export or import of capital, including, but not limited to, foreign exchange control restrictions, or that affect the remittance of dividends, interest or other payments to non UK resident holders of ordinary shares except as otherwise set out in Taxation on page 190 and except in respect of the governments of and/or certain citizens, residents or bodies of certain countries (described in applicable Bank of England Notices or European Union Council Regulations in force as at the date of this document).

Exchange rates

The following table shows the history of the exchange rates of one pound sterling to dollars for the periods indicated.

	Dollar equivalent of £1		
	High	Low	
April 2016	1.4650	1.4086	
March 2016	1.4514	1.3925	
February 2016	1.4592	1.3862	
January 2016	1.4689	1.4135	
December 2015	1.5211	1.4795	
		Average1	
2015/16		1.51	
2014/15		1.61	
2013/14		1.60	
2012/13		1.57	
2011/12		1.60	

 The average for each period is calculated by using the average of the exchange rates on the last day of each month during the period. See weighted average exchange rate on page 95.

Material interests in shares

As at 31 March 2016, National Grid had been notified of the following holdings in voting rights of 3% or more in the issued share capital of the Company:

	Number of ordinary shares	% of voting rights1
Black Rock, Inc.	220,432,122	5.88
Competrol International Investments Limited	149,414,285	3.98
The Capital Group Companies, Inc.	145,094,617	3.88

 This number is calculated in relation to the issued share capital at the time the holding was disclosed.

As at 18 May 2016, no further notifications have been received.

The rights attached to ordinary shares are detailed on page 187. All ordinary shares and all major shareholders have the same voting rights. The Company is not, to the best of its knowledge, directly or indirectly controlled.

Share capital

The share capital of the Company consists of ordinary shares of 11 $^{17}/_{43}$ pence nominal value each and ADRs, which represent five ordinary shares each.

Authority to purchase shares

Shareholder approval was given at the 2015 AGM to purchase up to 10% of the Company's share capital (being 374,138,605 ordinary shares). The Directors intend to seek shareholder approval to renew this authority at this year's AGM.

In some circumstances, the Company may find it advantageous to have the authority to purchase its own shares in the market, where the Directors believe this would be in the interests of shareholders generally. The Directors believe that it is an important part of the financial management of the Company to have the flexibility to repurchase issued shares in order to manage its capital base, including actively managing share issuances from the operation of the scrip dividend scheme. It is expected that repurchases to manage share issuances under the scrip dividend scheme will not exceed 2.5% of the issued share capital (excluding treasury shares) per annum.

When purchasing shares, the Company has, and will continue to, take into account market conditions prevailing at the time, other investment and financing opportunities and the overall financial position of the Company.

During the year the Company purchased ordinary shares in the capital of the Company as part of the management of the dilutive effect of share issuances under the scrip dividend scheme.

	Number of shares	Total nominal value	Percentage of called up share capital1
Shares held in Treasury purchased in prior years	152,945,477	£17,428,670.63	3.90 %
Shares purchased and held in Treasury during the year2,3	31,690,010	£3,611,187.19	0.81 %
Shares transferred from Treasury during the year (to employees under employee share plans)2	5,090,406	£580,069.52	0.13 %
Maximum number of shares held in Treasury during the year2	179,065,924	£20,405,186.69	4.56 %

- 1. Called up share capital of 3,924,038,086 ordinary shares as at the date of this Report.
- From 29 June 2015 to 31 March 2016.
 Shares purchased for a total cost of £267,109,568.

During the period from 1 April 2016 to 7 April 2016 the Company purchased 657,000 ordinary shares in the capital of the Company.

As at the date of this Report, the Company held 177,211,465 ordinary shares as treasury shares, representing 4.52% of the Company's called up share capital.

Shareholder information continued

Authority to allot shares

Shareholder approval was given at the 2015 AGM to allot shares of up to one third of the Company's share capital. The Directors are seeking this same level of authority this year. The Directors consider that the Company will have sufficient flexibility with this level of authority to respond to market developments. This authority is in line with investor guidelines.

The Directors currently have no intention of issuing new shares, or of granting rights to subscribe for or convert any security into shares, except in relation to, or in connection with, the operation and management of the Company's scrip dividend scheme and the exercise of options under the Company's share plans. No issue of shares will be made which would effectively alter control of the Company without the sanction of shareholders in general meeting.

The Company expects to actively manage the dilutive effect of share issuance arising from the operation of the scrip dividend scheme. In some circumstances, additional shares may be allotted to the market for this purpose under the authority provided by this resolution. Under these unlikely circumstances, it is expected that the associated allotment of new shares (or rights to subscribe for or convert any security into shares) will not exceed 1% of the issued share capital (excluding treasury shares) per year.

Dividend waivers

The trustees of the National Grid Employees Share Trust, which are independent of the Company, waived the right to dividends paid during the year, and have agreed to waive the right to future dividends, in relation to the ordinary shares and American Depositary Receipts (ADR) held by the trust.

Under the Company's ADR programme, the right to dividends in relation to the ordinary shares underlying the ADRs was waived during the year by the ADR Depositary, under an arrangement whereby the Company pays the monies to satisfy any dividends separately to the Depositary for distribution to ADR holders entitled to the dividend. This arrangement is expected to continue for future dividends.

Share price

National Grid ordinary shares are listed on the London Stock Exchange under the symbol NG and the ADSs are listed on the New York Stock Exchange under the symbol NGG.

Price history

The following table shows the highest and lowest intraday market prices for our ordinary shares and ADSs for the periods indicated:

		Ordinary share (pence)		os \$)
	High	Low	High	Low
2015/16	998.20	806.40	72.53	63.75
2014/15	965.00	806.22	77.21	62.25
2013/14	849.50	711.00	70.07	55.16
2012/13	770.00	627.00	58.33	49.55
2011/12	660.50	545.50	52.18	45.80

Shareholder analysis

The following table includes a brief analysis of shareholder numbers and shareholdings as at 31 March 2016.

Size of shareholding	Number of shareholders	% of shareholders	Number of shares	% of shares
1-50	164,955	17.79	4,739,232	0.12
51-100	248,832	26.84	17,628,238	0.45
101-500	400,098	43.15	84,389,639	2.15
501-1,000	56,663	6.11	39,596,174	1.01
1,001-10,000	53,455	5.76	132,042,157	3.37
10,001-50,000	2,120	0.23	38,087,028	0.97
50,001-100,000	205	0.02	14,532,280	0.37
100,001-500,000	464	0.05	113,514,429	2.89
500,001-1,000,000	140	0.02	101,923,402	2.60
1,000,001+	314	0.03	3,377,585,507	86.07
Total	927,246	100.00	3,924,038,086	100.00

Taxation

The discussion in this section provides information about certain US federal income tax and UK tax consequences for US Holders (defined below) of owning ADSs and ordinary shares. A US Holder is beneficial owner of ADSs or ordinary shares that:

- is for US federal income tax purposes (i) an individual citizen or resident of the United States, (ii) a corporation created or organised under the laws of the United States, any State thereof, (iii) an estate the income of which is subject to US federal income tax without regard to its source or (iv) a trust if a court within the United States is able to exercise primary supervision over the administration of the trust and one or more US persons have the authority to control all substantial decisions of the trust, or the trust has elected to be treated as a domestic trust for US federal income tax purposes;
- is not resident or ordinarily resident in the UK for UK tax purposes;
 and
- does not hold ADSs or ordinary shares in connection with the conduct
 of a business or the performance of services in the UK or otherwise
 in connection with a branch, agency or permanent establishment in the
 IIK

This discussion is not a comprehensive description of all the US federal income tax and UK tax considerations that may be relevant to any particular investor (including consequences under the US alternative minimum tax or net investment income tax) and does not address state, local, or other tax laws. National Grid has assumed that shareholders, including US Holders, are familiar with the tax rules applicable to investments in securities generally and with any special rules to which they may be subject. This discussion deals only with US Holders who hold ADSs or ordinary shares as capital assets. It does not address the tax treatment of investors who are subject to special rules, such as:

- financial institutions;
- insurance companies;
- dealers in securities or currencies;
- investors who elect mark-to-market treatment;
- entities treated as partnerships or other pass-through entities and their partners;
- individual retirement accounts and other tax-deferred accounts;
- tax-exempt organisations;
- investors who own (directly or indirectly) 10% or more of our voting stock;
- investors who hold ADSs or ordinary shares as a position in a straddle, hedging transaction or conversion transaction;
- persons that have ceased to be US citizens or lawful permanent residents of the US; and
- investors whose functional currency is not the US dollar.

The statements regarding US and UK tax laws and administrative practices set forth below are based on laws, treaties, judicial decisions and regulatory interpretations in effect on the date of this document. These laws and practices are subject to change without notice, potentially with retroactive effect. In addition, the statements set forth below are based on the representations of the Depositary and assume that each party to the Deposit Agreement will perform its obligations thereunder in accordance with its terms.

US Holders of ADSs generally will be treated as the owners of the ordinary shares represented by those ADSs for US federal income tax purposes. For the purposes of the Tax Convention, the Estate Tax Convention and UK tax considerations, this discussion assumes that a US Holder of ADSs will be treated as the owner of the ordinary shares represented by those ADSs. HMRC has stated that it will continue to apply its long-standing practice of treating a holder of ADSs as holding the beneficial interest in the ordinary shares represented by the ADSs; however, we note that this is an area of some uncertainty and may be subject to change.

US Holders should consult their own advisors regarding the tax consequences of buying, owning and disposing of ADSs or ordinary shares in light of their particular circumstances, including the effect of any state, local, or other tax laws.

Taxation of dividends

The UK does not currently impose a withholding tax on dividends paid to US Holders.

Cash distributions paid out of our current or accumulated earnings and profits (as determined for US federal income tax purposes) generally will be taxable to a US Holder as dividend income. Distributions in excess of current and accumulated earnings and profits will be treated as a non-taxable return of capital to the extent of a US Holder's basis in its ADSs or ordinary shares, as applicable, and thereafter as a capital gain. However, we do not maintain calculations of our earnings and profits in accordance with US federal income tax principles. US Holders should therefore assume that any distribution by us with respect to ADSs or ordinary shares will be reported as dividend income.

Dividends received by non-corporate US Holders with respect to ADSs or ordinary shares will generally be taxable at the reduced rate applicable to long-term capital gains provided (i) either (a) we are eligible for the benefits of the Tax Convention or (b) ADSs or ordinary shares are treated as 'readily tradable' on an established securities market in the United States and (ii) we are not, for our taxable year during which the dividend is paid or the prior year, a passive foreign investment company for US federal income tax purposes (a PFIC), and certain other requirements are met. We (1) expect that our shares will be treated as 'readily tradable' on an established securities market in the United States as a result of the trading of ADSs on the New York Stock Exchange and (2) believe we are eligible for the benefits of the

Based on our audited financial statements and the nature of our business activities, we believe that we were not treated as a PFIC for US federal income tax purposes with respect to our taxable year ending 31 March 2016. In addition, based on our current expectations regarding the value and nature of our assets, the sources and nature of our income, and the nature of our business activities, we do not anticipate becoming a PFIC in the foreseeable future.

Dividends received by corporate US Holders with respect to ADSs or ordinary shares will not be eligible for the dividends received deduction generally allowed to corporations.

Taxation of capital gains

US Holders will not be subject to UK taxation on any capital gain realised on the sale or other disposition of ADSs or ordinary shares.

Provided that we are not a PFIC for any taxable year during which a US Holder holds their ADSs or ordinary shares, upon a sale or other disposition of ADSs or ordinary shares, a US Holder generally will recognise capital gain or loss equal to the difference between the US dollar value of the amount realised on the sale or other disposition and the US Holder's adjusted tax basis in the ADSs or ordinary shares. Such capital gain or loss generally will be long-term capital gain or loss if the ADSs or ordinary shares were held for more than one year. For non-corporate US Holders, long-term capital gain is generally taxed at a lower rate than ordinary income. A US Holder's ability to deduct capital losses is subject to significant limitations.

UK stamp duty and stamp duty reserve tax (SDRT)

Transfers of ordinary shares - SDRT at the rate of 0.5% of the amount or value of the consideration will generally be payable on any agreement to transfer ordinary shares that is not completed using a duly stamped instrument of transfer (such as a stock transfer form).

Where an instrument of transfer is executed and duly stamped before the expiry of the six year period beginning with the date on which the agreement is made, the SDRT liability will be cancelled. If a claim is made within the specified period, any SDRT which has been paid will be refunded. SDRT is due whether or not the agreement or transfer is made or carried out in the UK and whether or not any party to that agreement or transfer is a UK resident.

Purchases of ordinary shares completed using a stock transfer form will generally result in a UK stamp duty liability at the rate of 0.5% (rounded up to the nearest £5) of the amount or value of the consideration. Paperless transfers under the CREST paperless settlement system will generally be liable to SDRT at the rate of 0.5%, and not stamp duty. SDRT is generally the liability of the purchaser and $\ensuremath{\mathsf{UK}}$ stamp duty is usually paid by the purchaser or transferee.

Transfers of ADSs - No UK stamp duty will be payable on the acquisition or transfer of existing ADSs or beneficial ownership of ADSs, provided that any instrument of transfer or written agreement to transfer is executed outside the UK and remains at all times outside the UK.

An agreement for the transfer of ADSs in the form of ADRs will not result in a SDRT liability. A charge to stamp duty or SDRT may arise on the transfer of ordinary shares to the Depositary or The Bank of New York Mellon as agent of the Depositary (the Custodian).

The rate of stamp duty or SDRT will generally be 1.5% of the value of the consideration or, in some circumstances, the value of the ordinary shares concerned. However, there is no 1.5% SDRT charge on the issue of ordinary shares (or, where it is integral to the raising of new capital, the transfer of ordinary shares) to the Depositary or the Custodian.

The Depositary will generally be liable for the stamp duty or SDRT. Under the terms of the Deposit Agreement, the Depositary will charge any tax payable by the Depositary or the Custodian (or their nominees) on the deposit of ordinary shares to the party to whom the ADSs are delivered against such deposits. If the stamp duty is not a multiple of £5, the duty will be rounded up to the nearest multiple of £5.

US information reporting and backup withholding tax

Dividend payments made to US Holders and proceeds paid from the sale, exchange, redemption or disposal of ADSs or ordinary shares to US Holders may be subject to information reporting to the US Internal Revenue Service (IRS). Such payments may be subject to backup withholding taxes if the US Holder fails to provide an accurate taxpayer identification number or certification of exempt status or fails to comply with applicable certification requirements.

US Holders should consult their tax advisors about these rules and any other reporting obligations that may apply to the ownership or disposition of ADSs or ordinary shares, including reporting requirements related to the holding of certain foreign financial assets.

UK inheritance tax

An individual who is domiciled in the US for the purposes of the Estate Tax Convention and who is not a UK national for the purposes of the Estate Tax Convention will generally not be subject to UK inheritance tax in respect of (i) the ADSs or ordinary shares on the individual's death or (ii) a gift of the ADSs or ordinary shares during the individual's lifetime. This is not the case where the ADSs or ordinary shares are part of the business property of the individual's permanent establishment in the UK or relate to a fixed base in the UK of an individual who performs independent personal services.

Special rules apply to ADSs or ordinary shares held in trust. In the exceptional case where the ADSs or shares are subject both to UK inheritance tax and to US federal gift or estate tax, the Estate Tax Convention generally provides for the tax paid in the UK to be credited against tax paid in the US.

Capital gains tax (CGT) for UK resident shareholders

You can find CGT information relating to National Grid shares for UK resident shareholders on our website under: Investors, Shareholder centre, More information and help. Share prices on specific dates are also available on our website.

192

Other disclosures

All-employee share plans

The Company has a number of all-employee share plans as described below, which operated during the year. These allow UK- or US-based employees to participate in either HMRC (UK) or IRS (US) approved plans and to become shareholders in National Grid.

Sharesave

Employees resident in the UK are eligible to participate in the Sharesave plan. Under this plan, participants may contribute between £5 and £500 in total each month, for a fixed period of three years, five years or both. Contributions are taken from net salary.

CTD

Employees resident in the UK are eligible to participate in the SIP. Contributions up to £150 are deducted from participants' gross salary and used to purchase ordinary shares in National Grid each month. The shares are placed in trust.

US Incentive Thrift Plans

Employees of National Grid's US companies are eligible to participate in the Thrift Plans, which are tax-advantaged savings plans (commonly referred to as 401(k) plans). They are DC pension plans that give participants the opportunity to invest up to applicable federal salary limits. The federal limits for calendar year 2015 are: for pre-tax contributions, a maximum of 50% of salary limited to \$18,000 for those under the age of 50 and \$24,000 for those age 50 and above; for post-tax contributions, up to 15% of salary. The total amount of employee contributions (pre-tax and post-tax) may not exceed 50% of compensation, and are further subject to the combined federal annual contribution limit of \$53,000. For calendar year 2016, participants may invest up to the applicable federal salary limits: for pre-tax contributions, a maximum of 50% of salary limited to \$18,000 for those under the age of 50 and \$24,000 for those age 50 and above; for post-tax contributions, up to 15% of salary. The total amount of employee contributions (pre-tax and post-tax) may not exceed 50% of compensation, and are further subject to the combined federal annual contribution limit of \$53,000.

ESPP

Employees of National Grid's US companies are eligible to participate in the ESPP (commonly referred to as a 423(b) plan). Eligible employees have the opportunity to purchase ADSs on a monthly basis at a 15% discounted price. Under the plan, employees may contribute up to 20% of base pay each year, up to a maximum annual contribution of \$18,888 to purchase ADSs in National Grid.

Change of control provisions

No compensation would be paid for loss of office of Directors on a change of control of the Company. As at 31 March 2016, the Company had undrawn borrowing facilities of £1.7 billion available to it with a number of banks, and a further £1.4 billion of drawn bank loans which, on a change of control of the Company following a takeover bid, may alter or terminate. All the Company's share plans contain provisions relating to a change of control. Outstanding awards and options would normally vest and become exercisable on a change of control, subject to the satisfaction of any performance conditions at that time. In the event of a change of control of the Company, a number of governmental and regulatory consents or approvals are likely to be required, arising from laws or regulations of the UK, US or the EU. Such consents or approvals may also be required for acquisitions of equity securities that do not amount to a change of control.

No other agreements that take effect, alter or terminate upon a change of control of the Company following a takeover bid are considered to be significant in terms of their potential impact on the business as a whole.

Code of Ethics

In accordance with US legal requirements, the Board has adopted a Code of Ethics for senior financial professionals. This code is available on our website (where any amendments or waivers will also be posted) under: About us, Corporate governance, Code of Ethics. There were no amendments to, or waivers of, our Code of Ethics during the year.

Conflicts of interest

In accordance with the Companies Act 2006, the Board has a policy and procedure in place for the disclosure and authorisation (if appropriate) of actual and potential conflicts of interest. The Board continues to monitor and note possible conflicts of interest that each Director may have. The Directors are regularly reminded of their continuing obligations in relation to conflicts, and are required annually to review and confirm their external interests. During the year ended 31 March 2016, no actual conflicts of interest were identified, which required approval by the Board. However, the Board was advised of two situations in relation to which potential conflicts of interest could arise, and authorised those potential conflicts in accordance with its powers as set out in the Articles.

Corporate governance practices: differences from New York Stock Exchange (NYSE) listing standards

The Company is listed on the NYSE and is therefore required to disclose differences in its corporate governance practices adopted as a UK listed company, compared with those of a US company.

The corporate governance practices of the Company are primarily based on the requirements of the Code but substantially conform to those required of US companies listed on the NYSE. The following is a summary of the significant ways in which the Company's corporate governance practices differ from those followed by US companies under Section 303A Corporate Governance Standards of the NYSE.

- The NYSE rules and the Code apply different tests for the independence of Board members.
- The NYSE rules require a separate nominating/corporate governance committee composed entirely of independent Directors. There is no requirement for a separate corporate governance committee in the UK. Under the Company's corporate governance policies, all Directors on the Board discuss and decide upon governance issues, and the Nominations Committee makes recommendations to the Board with regard to certain of the responsibilities of a corporate governance committee.
- The NYSE rules require listed companies to adopt and disclose corporate governance guidelines. While the Company reports compliance with the Code in each Annual Report and Accounts, the UK requirements do not require the Company to adopt and disclose separate corporate governance guidelines.
- The NYSE rules require a separate audit committee composed of at least three independent members. While the Company's Audit Committee exceeds the NYSE's minimum independent Non-executive Director membership requirements, it should be noted that the quorum for a meeting of the Audit Committee, of two independent Non-executive Directors, is less than the minimum membership requirements under the NYSE rules
- The NYSE rules require a compensation committee composed entirely of independent Directors, and prescribe criteria to evaluate the independence of the committee's members and its ability to engage external compensation advisors. While the Code prescribes different independence criteria, the Non-executive Directors on the Remuneration Committee have each been deemed independent by the Board under the NYSE rules. Although the evaluation criteria for appointment of external advisors differ under the Code, the Remuneration Committee is solely responsible for appointment, retention and termination of such advisors.

Other disclosures continued

Directors' indemnity

The Company has arranged, in accordance with the Companies Act 2006 and the Articles, qualifying third-party indemnities against financial exposure that Directors may incur in the course of their professional duties. Equivalent qualifying third-party indemnities were, and remain, in force for the benefit of those Directors who stood down from the Board in prior financial years for matters arising when they were Directors of the Company. Alongside these indemnities, the Company places Directors' and Officers' liability insurance cover for each Director.

Employees

We negotiate with recognised unions. It is our policy to maintain well developed communications and consultation programmes and there have been no material disruptions to our operations from labour disputes during the past five years. National Grid believes that it can conduct its relationships with trade unions and employees in a satisfactory manner.

Human Rights

Respect for human rights is incorporated into our employment practices and our values, which include respecting others and valuing diversity. 'Always Doing the Right Thing' is our guide to ethical business conduct - the way in which we conduct ourselves allows us to build trust with the people we work with. We earn this trust by doing things in the right way, building our reputation as an ethical company that our stakeholders want to do business with, and that our employees want to work for. Although we do not have specific policies relating to $\ensuremath{\mathsf{human}}$ rights, slavery and human trafficking, our procurement policies integrate sustainability into the way we do business throughout our supply chain, so that we create value, preserve natural resources and respect the interests of the communities we serve and from which we procure goods and services. Through our Global Supplier Code of Conduct (GSCoC), we expect our suppliers to keep to all laws relating to their business, as well as adhere to the principles of the United Nations Global Compact, the Ethical Trading Initiative Base Code and the UK Modern Slavery Act 2015. In 2015 the GSCoC was further updated to include the requirements of the Living Wage Foundation. To read more on the Company's commitment to the Living Wage please see page 45.

Not applicable

Page 190

Material contracts

Each of our Executive Directors has a service agreement and each Non-executive Director has a letter of appointment. No contract (other than contracts entered into in the ordinary course of business) has been entered into by National Grid within the two years immediately preceding the date of this Report which is, or may be, material; or which contains any provision under which any member of National Grid has any obligation or entitlement which is material to National Grid at the date of this Report.

Political donations and expenditure

At this year's AGM the Directors will seek authority from shareholders, on a precautionary basis, for the Company and its subsidiaries to make donations to registered political parties and other political organisations and/or incur political expenditure in the European Union (EU), in each case in amounts not exceeding £125,000 in aggregate. The definitions of these terms in the Companies Act 2006 are very wide and as a result this can cover bodies such as those concerned with policy review, law reform and the representation of the business community. It could include special interest groups, such as those involved with the environment, which the Company and its subsidiaries might wish to support, even though these activities are not designed to support or influence support for a particular party. The Company has no intention of changing its current practice of not making political donations or incurring political expenditure within the ordinary meaning of those words. This authority is therefore being sought to ensure that none of the Company's activities inadvertently infringe these rules.

National Grid made no donations in the EU during the year, including donations as defined for the purposes of the Political Parties, Elections and Referendums Act 2000. National Grid USA and its affiliated New York and federal political action committees (each, a PAC) made political donations in the US totalling \$67,550 (£45,952) during the year. National Grid USA's affiliated New York PAC was funded partly by contributions from National Grid USA and certain of its subsidiaries and partly by voluntary employee contributions. National Grid USA's affiliated federal PAC was funded wholly by voluntary employee contributions.

Property, plant and equipment

This information can be found under the heading note 11 property, plant and equipment on pages 122 and 123, note 19 Borrowings on pages 130 and 131, Strategic Report pages 10 to 13, where we operate on page 175 and principal operations on pages 31 to 43.

Research and development

Expenditure on research and development during the year was £29 million (2014/15: £23 million; 2013/14: £12 million). Innovation funding throughout 2015/16 has sustained investment across all three of our UK Regulated business areas: UK ET, UK GT and UK GD. Through collaboration across the industry, we have continued our drive to deliver benefits for our stakeholders, challenging the way we work and seeking new technologies to deliver these benefits. Due to the way in which we work with a large number of partners on new ideas, our disclosed research and development expenditure is lower than the overall contribution we make to the industry. We only disclose directly incurred expenditure, and not those amounts our partners incur working on projects with us.

The UK ET innovation investment continues to aim to advance our strategic ambitions to reduce the cost of providing a secure, reliable and sustainable electricity transmission system. We have installed a 400kV transformer with synthetic ester, an insulating fluid that presents a significantly lower fire risk than the mineral oil normally used; and we've started work towards live trials of a new insulating gas that could be an effective alternative to SF6.

Research has also progressed on understanding of and ability to predict and manage the impact of increased levels of distributed and renewable generation on the system. UK ET has also secured £12 million of Network Innovation Competition funding support for our £14 million investment in an innovation facility in northeast Wales.

The UK GT innovation portfolio has continued to grow, with a key focus on safety and risk reduction through projects exploring new techniques to conduct internal pipe inspection and improve asset integrity, alongside those to provide enhanced gas forecasting and the development of new smart asset maintenance techniques. In addition, UK GT won £4.8 million funding for Project 'CLOCC' (customer low-cost connections), which seeks to minimise the time and cost of connections to the national gas transmission system.

Innovation in UK GD continues to grow with a diversified portfolio focusing on six value areas which reflect both the RIIO outputs and the UK GD ambition. We continue to develop and refine robotic and pipelining technologies to reduce the impact of our pipe replacement activities on our customers and the environment. Our focus has shifted towards implementing the output of these innovations into the business and demonstrating the value of our innovation projects to our

Research, Development & Demonstration (RD&D) work in the US has focused on the advancement of products, processes, systems and work methods that may be new to National Grid. This is accomplished by working with internal departments to identify where strategic RD&D investment is needed and is likely to prove beneficial to National Grid. To achieve these goals, we work in collaboration with technical organisations, academia and vendors in the energy sector that align with our goals and objectives. This collaboration has also helped inform our strategic direction in response to jurisdictional requests for modernisation (Grid Modernization in Massachusetts and 'Reforming the Energy Vision' in New York).

In the year, we invested and participated in several significant pilot projects with the intent of obtaining operational knowledge and experience of technology driven system impacts. For example, we are pre-approved to construct up to 20 MW of photovoltaic (PV) facilities in Massachusetts as part of our 'Solar Phase II' programme. These PV sites are designed with advanced grid interactive control features, beyond what typical PV facilities are required to provide.

Operating and analysing the performance of these grid interactive controls will help prepare and future proof our system to enable a high penetration of the Distributed Energy Resources on the distribution system. We are also supporting several Department of Energy projects under the SunShot programme, aimed to further integration and proliferation of solar PV. As part of its ongoing Worcester Smart Energy Solutions pilot in Massachusetts, the Company is continuing to examine its learnings from the customer and grid technology as deployed. Lastly, the Company is also deploying Volt VAR Optimization and Conservation Voltage Reduction technology on several distribution circuits in Rhode Island, examining the impact of intelligent centralised distribution asset control.

US expenditure for gas research, development and deployment of new technologies during 2015/16 was \$2.6 million. This is largely funded through a special Regulatory Order and customer surcharge mechanism in New York State. Primary investments were in the areas of robotic inspection tools and enhancements for condition assessments of the most difficult to inspect pipelines. In addition, new tools and techniques are being developed to increase safety of the workforce, improve welding practices and advance the inspection of polyethylene pipe construction, joint quality and the tracking and traceability of materials used in the construction of our transmission and distribution assets.

To further advance the safe operation of our systems and to improve overall customer safety, methane detection equipment is being deployed and tested both as mobile solutions to identify leakage in the field and in residential buildings. After completing extensive bench testing, we are implementing a pilot study in the use of existing and new technology for methane sensors within residential properties.

Unresolved SEC staff comments

There are no unresolved SEC staff comments required to be reported.

Other unaudited financial information

Reconciliations of adjusted profit measures

Use of adjusted profit measures

In considering the financial performance of our businesses and segments, we analyse each of our primary financial measures of operating profit, profit before tax, profit for the year attributable to equity shareholders and EPS into two components.

The first of these components is referred to as an adjusted profit measure, also known as a business performance measure. This is the principal measure used by management to assess the performance of the underlying business.

Adjusted results exclude exceptional items and remeasurements. These items are reported collectively as the second component of the financial measures. Note 4 on page 111 explains in detail the items which are excluded from our adjusted profit measures.

Adjusted profit measures have limitations in their usefulness compared with the comparable total profit measures as they exclude important elements of our financial performance. However, we believe that by presenting our financial performance in two components it is easier to read and interpret financial performance between periods, as adjusted profit measures are more comparable having removed the distorting effect of the excluded items. Those items are more clearly understood if separately identified and analysed.

The presentation of these two components of financial performance is additional to, and not a substitute for, the comparable total profit measures presented.

Management uses adjusted profit measures as the basis for monitoring financial performance and in communicating financial performance to investors in external presentations and announcements of financial results.

Internal financial reports, budgets and forecasts are primarily prepared on the basis of adjusted profit measures, although planned exceptional items, such as significant restructurings, are also reflected in budgets and forecasts. We separately monitor and disclose the excluded items as a component of our overall financial performance.

Reconciliation of adjusted operating profit to total operating profit

Adjusted operating profit is presented on the face of the income statement under the heading operating profit before exceptional items and remeasurements.

Commentary on consolidated financial statements for the year ended 31 March 2015

In compliance with SEC rules, we present a summarised analysis of movements in the income statement, an analysis of movements in adjusted operating profit by operating segment and a summarised analysis of movements in the statement of financial position for the year ended 31 March 2015. This should be read in conjunction with the 31 March 2016 unaudited commentary included on pages 95, 99, 107 and 108.

Analysis of the income statement for the years ended 31 March 2015 and 31 March 2014

Revenue

Revenue for the year ended 31 March 2015 increased by £392 million to £15,201 million. This increase was driven by higher revenues in our UK ET business, reflecting increases in allowed Transmission Owner revenues, and higher core allowances and pass-through costs in UK GT. Revenues in our UK GD business were slightly lower as a result of changes in allowed revenues for replacement expenditure (repex). Our US Regulated business revenues were also lower, as a result of the end of the LIPA MSA last year, partially offset by revenue increases from existing rate plans, including capex trackers, together with additional income from gas customer growth and the impact of the strengthening US dollar.

Revenue for the year ended 31 March 2014 increased by £450 million to £14,809 million. This increase was driven by higher revenues in our UK ET and UK GD businesses, principally as a result of the new RIIO regulatory arrangements. Revenue in our US Regulated business was also higher, reflecting higher pass-through costs such as gas and electricity commodity costs, partially offset by the end of Niagara Mohawk deferral revenue recoveries at March 2013 and the impact of the weaker dollar.

Operating costs

Operating costs for the year ended 31 March 2015 of £11,421 million were £347 million higher than the prior year. This increase in costs included a £154 million year on year impact of changes in exceptional items and remeasurements, which is discussed below. Excluding exceptional items and remeasurements, operating costs were £193 million higher, principally due to: increases in controllable costs, including the impact of inflation and additional costs incurred in the US to improve data quality and bring regulatory filings up to date; higher US bad debt costs following last year's exceptionally cold winter; and higher depreciation and amortisation as a result of continued investment programmes. These cost increases were partly offset by a reduction in spend on US financial systems implementation and stabilisation upgrades, with the project completing in the first half

Operating profit for the year ended 31 March 2015 included an £83 million loss (2013/14: £16 million gain) on remeasurement of commodity contracts. The year ended 31 March 2014 also included a net £55 million gain on exceptional items, including a net gain on the LIPA MSA transition in the US of £254 million; restructuring costs of £136 million, primarily in the UK as we reorganised certain parts of our business to deliver under the new RIIO price controls; and a £79 million provision for the demolition of UK gas holders that are no longer required.

Operating costs for the year ended 31 March 2014 of £11,074 million were £464 million higher than the prior year. This increase in costs was predominantly due to increases in pass-through costs in our UK and US regulated business, together with higher depreciation and amortisation as a result of continued investment and increases in our controllable costs.

Net finance costs

For the year ended 31 March 2015, net finance costs before exceptional items and remeasurements were £75 million lower than 2013/14 at £1,033 million, mainly as a result of lower average gross debt through the year, lower RPI in the UK and refinancing debt at lower rates.

For the year ended 31 March 2014, net finance costs before exceptional items and remeasurements were £16 million lower than 2012/13 at £1,108 million, mainly due to the impact of the weaker dollar.

Finance costs for the year ended 31 March 2015 included exceptional debt redemption costs of £131 million and a loss of £34 million on financial remeasurements (2013/14: gain of £93 million), relating to net losses on derivative financial instruments.

Tax

The tax charge on profit before exceptional items and remeasurements for the year ended 31 March 2015 was £114 million higher than 2013/14. This was mainly due to higher profits before tax and the non recurrence of one-off items that benefited the prior year.

The 2013/14 tax charge on profit before exceptional items and remeasurements was £38 million lower than 2012/13 at £581 million. This was mainly due to a 1% decrease in the UK statutory corporation tax rate in the year and a change in the UK/US profit mix where higher UK profits were taxed at the lower UK tax rate. Our tax charge was also affected by changes in tax provisions in respect of prior years.

Exceptional tax for 2014/15 of £78 million primarily represents tax credits on the exceptional items and remeasurements described above.

Exceptional tax for 2013/14 included an exceptional deferred tax credit of £398 million arising from a reduction in the UK corporation tax rate from 23% to 21% applicable from 1 April 2014 and a further reduction to 20% from 1 April 2015.

Adjusted earnings and EPS

As a result of the variances described above, adjusted earnings for the year ended 31 March 2015 were £2,189 million. For the year ended 31 March 2014, adjusted earnings were £2,015 million.

The above earnings performance translated into adjusted EPS growth in 2014/15 of 4.5p (8%) and 2.7p (5%) in 2013/14.

In accordance with IAS 33, all EPS and adjusted EPS amounts for comparative periods have been restated for shares issued via scrip dividends and the bonus element of the 2010 rights issue.

Other unaudited financial information continued

Analysis of the adjusted operating profit by segment for the year ended 31 March 2015

UK Electricity Transmission

For the year ended 31 March 2015, revenue in the UK ET segment was £367 million higher at £3,754 million, and adjusted operating profit increased by £150 million to £1,237 million.

Net regulated income after pass-through costs was £230 million higher, principally reflecting increases in allowed Transmission Owner revenues this year and a £43 million benefit relating to legal settlements. This was partially offset by under-recoveries of allowed revenue in the year of £89 million compared with under-recoveries of £60 million in the prior year. Regulated controllable costs were £14 million higher due to inflation, organisational change costs and additional tower maintenance costs. Depreciation and amortisation was £33 million higher reflecting the continued capital investment programme (investment in the year was £1,074 million). Other costs were £4 million higher than prior year.

UK Gas Transmission

Revenue in the UK GT segment increased by £81 million in 2014/15 to £1,022 million and adjusted operating profit increased by £20 million to £437 million.

Net regulated income after pass-through costs was £42 million higher due to earned gas permit and constraints management incentives. In addition, under-recoveries of allowed revenue in the year of £18 million were £3 million favourable to last year's under-recoveries of £21 million. Partially offsetting the revenue gains, regulated controllable costs were £8 million higher, mainly as a result of additional system operator costs relating to EU work and some organisation change costs. Other operating costs were also £17 million higher, including a £13 million provision for decommissioning the Avonmouth LNG plant. Capital investment remained around the same level as last year at £184 million.

UK Gas Distribution

UK GD revenue decreased by £31 million in 2014/15 to £1,867 million, and adjusted operating profit decreased by £78 million to £826 million.

Net regulated income after pass-through costs was £11 million lower, reflecting changes in allowed revenues for replacement expenditure (repex). Timing differences reduced net revenues by a further £16 million, with £13 million over-recoveries in 2014/15, compared with a £29 million over-recovery in the prior year. Regulated controllable costs were £22 million higher primarily due to inflation and some organisation change costs. Depreciation and amortisation was £15 million higher reflecting the continued capital investment programme (investment in the year was £498 million). Other costs were £14 million higher, reflecting a provision for additional asset protection costs.

US Regulated

Revenue in our US Regulated business was £54 million lower in 2014/15 at £7,986 million, while adjusted operating profit increased by £39 million to £1,164 million.

The stronger dollar increased operating profit in the year by £30 million. Excluding the impact of foreign exchange, net regulated income increased by £81 million, reflecting increased revenue from existing rate plans, including capex trackers, together with additional income from gas customer growth, partially offset by the impact of the end of LIPA management services activities (MSA) in December 2013. In addition, over-recoveries of allowed revenues in the year of £30 million were £20 million favourable to last year's over-recoveries of £10 million. Regulated controllable costs increased by £17 million excluding the impact of foreign exchange, as a result of increased gas leak and compliance work and additional costs incurred to improve data quality and bring regulatory filings up to date, partly offset by the cessation of costs associated with the LIPA MSA activities. Bad debt costs were £62 million higher excluding the impact of foreign exchange, following last year's exceptionally cold winter.

There were no major storms affecting our operations in the years ended 31 March 2014 and 2015.

Our capital investment programme continued in the US, with a further £1,501 million invested in 2014/15, including gas leak reduction programmes and electricity capacity and reinforcement work.

Other activities

Revenue in Other activities increased by £26 million to £762 million in the year ended 31 March 2015. Adjusted operating profit was £68 million higher at £199 million.

Operating profit in the French interconnector was £18 million higher as a result of strong auction revenues this year. In the US, corporate and other activities losses were £63 million lower, mainly as a result of our finance system upgrade completing in the first half of this year. Capital investment in our Other activities was £33 million higher at £213 million.

Analysis of the statement of financial position for the year ended 31 March 2015

Goodwill and other intangible assets

Goodwill and intangibles increased by £684 million to £5,947 million as at 31 March 2015. This increase primarily relates to foreign exchange movements of £602 million and software additions of £207 million, partially offset by software amortisation of £121 million.

Property, plant and equipment

Property, plant and equipment increased by £3,544 million to £40,723 million as at 31 March 2015. This was principally due to capital expenditure of £3,263 million on the renewal and extension of our regulated networks and foreign exchange movements of £1,703 million, offset by depreciation of £1,361 million in the year.

Investments and other non-current assets

Investments in joint ventures and associates, financial and other investments and other non-current assets increased by £6 million to £728 million. This was primarily due to a decrease in investments in joint ventures of £33 million, which includes dividends received of £79 million, partially offset by our share of post-tax results for the year of £46 million, more than offset by an increase in available-for-sale investments of £46 million.

Inventories and current intangible assets, and trade and other receivables

Inventories and current intangible assets, and trade and other receivables increased by £53 million to £3,176 million as at 31 March 2015. This was due to an increase in inventories and current intangible assets of £72 million, offset by a net decrease in trade and other receivables of £19 million. The £19 million decrease consists of an increase in foreign exchange of £211 million due to the stronger US dollar against sterling and a decrease in the underlying balances of £229 million, reflecting collection of large prior year balances, including LIPA MSA and Superstorm Sandy re-insurance receivables.

Trade and other payables

Trade and other payables increased by £261 million to £3,292 million, primarily due to foreign exchange movements of £161 million and an increase in VAT liability following a change in regulations on wholesale gas and electricity trading.

Current tax balances

Current tax balances decreased by £33 million to £124 million as at 31 March 2015. This was due to the tax payments made in 2014/15 being only partially offset by a smaller current year tax charge.

Deferred tax balances

Deferred tax balances increased by £215 million to £4,297 million as at 31 March 2015. This was primarily due to the impact of the £299 million deferred tax credit on actuarial losses (a £172 million tax charge in 2013/14) being offset by the impact of the reduction in the UK statutory tax rate, foreign exchange movements of £203 million and the reduction in prior year charges.

Provisions and other non-current liabilities

Provisions (both current and non-current) and other non-current liabilities increased by £168 million to £3,654 million as at 31 March 2015. Total provisions increased by £90 million in the year. The underlying movements include additions of £105 million relating to an increase to the provision for the estimated environmental restoration and remediation costs for a number of sites and other provision increases of £57 million, together with foreign exchange movements of £133 million, offset by utilisation of £209 million in relation to all classes of provisions.

Net debt

Net debt is the aggregate of cash and cash equivalents, current financial and other investments, borrowings, and derivative financial assets and liabilities.

Net pension and other post-retirement obligations

A summary of the total UK and US assets and liabilities and the overall net IAS 19 (revised) accounting deficit is shown below:

	UK	US	Total
Net plan liability	£m	£m	£m
As at 1 April 2014	(753)	(1,658)	(2,411)
Exchange movements	=	(236)	(236)
Current service cost	(70)	(116)	(186)
Net interest cost	(27)	(74)	(101)
Curtailments and other	(34)	(27)	(61)
Actuarial gains/(losses)			
- on plan assets	1,929	225	2,154
- on plan liabilities	(1,975)	(950)	(2,925)
Employer contributions	258	250	508
As at 31 March 2015	(672)	(2,586)	(3,258)
Represented by:			
Plan assets	19,453	6,955	26,408
Plan liabilities	(20,125)	(9,541)	(29,666)
	(672)	(2,586)	(3,258)

The principal movements in net obligations during the year included net actuarial losses of £771 million and employer contributions of £508 million. Net actuarial losses included actuarial losses on plan liabilities of £2,746 million arising as a consequence of increases in the UK real discount rate and the nominal discount rate in the US. This was partially offset by actuarial gains of £2,154 million arising on plan assets.

Off balance sheet items

There were no significant off balance sheet items other than the contractual obligations shown in note 30(b) to the consolidated financial statements, and the commitments and contingencies discussed in note 27.

Through the ordinary course of our operations, we are party to various litigation, claims and investigations. We do not expect the ultimate resolution of any of these proceedings to have a material adverse effect on our results of operations, cash flows or financial position.

Summary consolidated financial information

Financial summary (unaudited)

The financial summary set out below has been derived from the audited consolidated financial statements of National Grid for the five financial years ended 31 March 2016. It should be read in conjunction with the consolidated financial statements and related notes, together with the Strategic Report. The information presented below for the years ended 31 March 2012, 2013, 2014, 2015 and 2016 has been prepared under IFRS issued by the IASB and as adopted by the ${\rm EU^1}.$

For the years ended 31 March 2015 and 31 March 2016, there have been no significant changes in accounting standards, interpretations or policies that have a material financial impact on the selected financial data. For the year ended 31 March 2014, the adoption of IAS 19 (revised) 'Employee benefits' resulted in a significant change in pensions and employee benefits accounting. The numbers included in the selected financial data above for the years 31 March 2012 and 2013 were restated to show the impact of IAS 19 (revised).

National Grid Annual Report and Accounts 2015/16

Summary consolidated financial information

201

Further information regarding financial KPIs and other performance measures

As part of our financial review on pages 22–25, various financial KPIs and performance measures are identified. Further details as to how these are calculated are provided below.

Group return on equity

The Group RoE calculation provides a measure of the performance of the whole Group compared with the amounts invested by the Group in assets attributable to equity shareholders.

 $\begin{tabular}{ll} \textbf{Calculation:} & Regulatory financial performance including a long-run assumption of 3.0% RPI inflation, less adjusted interest and adjusted taxation divided by equity investment in assets. \\ \end{tabular}$

- Adjusted interest removes interest on pensions, capitalised interest and release of provisions.
- Adjusted taxation adjusts the Group taxation charge for differences between IFRS profit before tax and regulated financial performance less adjusted interest.
- Equity investment in assets is calculated as the total opening UK regulatory asset value, the total opening US rate base plus goodwill plus opening net book value of Other activities and our share of joint ventures and associates; minus opening net debt as reported under TEPS

UK regulated return on equity

UK operational return is a measure of how a business is performing operationally against the assumptions used by the regulator. These returns are calculated using the assumption that the businesses are financed in line with the regulatory adjudicated capital structure, at the cost of debt assumed by the regulator and that RPI inflation is equal to a long-run assumption of 3.0%.

Calculation: Base allowed RoE plus or minus the following items:

- Additional allowed revenues/profits earned in the year from incentive schemes, less associated corporation tax charge;
- Totex outperformance multiplied by the company sharing factor set by the regulator; and
- Revenues (net of associated depreciation and base allowed asset return) allowed in the year associated with incentive performance earned under previous price controls but not yet fully recovered, less associated corporation tax charge (excluding logging up or pensions recovery).

Divided by average equity RAV in line with regulatory assumed capital structure.

US regulated return on equity

US regulated RoE is a measure of how a business is performing operationally against the assumptions used by the regulator. This US operational return measure is calculated using the assumption that the businesses are financed in line with the regulatory adjudicated capital structure. This is a post-tax US GAAP metric as calculated annually (calendar year to 31 December).

Calculation: Regulated net income divided by equity rate base.

- Regulated net income calculated as US GAAP operating profit less interest on the adjudicated debt portion of the rate base (calculated at the actual rate on long term debt, adjusted where the proportion of long term debt in the capital structure is materially different from the assumed regulatory proportion) less tax at the adjudicated rate.
- Regulated net income is adjusted for earned savings as appropriate and for certain material specified items.
- Equity rate base is the average rate base for the calendar year as reported to the Group's regulators or, where a reported rate base is not available, an estimate based on rate base calculations used in previous rate filings multiplied by the adjudicated equity portion in the regulatory capital structure.

Definitions and glossary of terms

Our aim is to use plain English in this Annual Report and Accounts. However, where necessary, we do use a number of technical terms and/or abbreviations and we summarise the principal ones below, together with an explanation of their meanings. The descriptions below are not formal legal definitions.

American Depositary Shares (ADSs)

Securities of National Grid listed on the New York Stock Exchange, each of which represents five ordinary shares. They are evidenced by American Depositary Receipts or ADRs.

Annual General Meeting (AGM)

Meeting of shareholders of the Company held each year to consider ordinary and special business as provided in the Notice of AGM.

Board

The Board of Directors of the Company (for more information see pages

Basis point (bps) is a unit that is equal to 1/100th of 1% and is typically used to denote the movement in a percentage based metric such as interest rates or RoE. A 0.1% change in a percentage represents 10 basis points.

BritNed

BritNed Development Limited.

called up share capital

Shares (common stock) that have been issued and have been fully paid

The amount at which an asset or a liability is recorded in the Group's statement of financial position and the Company's balance sheet.

the Company, the Group, National Grid, we, our or us We use the terms 'the Company', 'the Group', 'National Grid', 'we', 'our' or 'us' to refer to either National Grid plc itself or to National Grid plc and/or all or certain of its subsidiaries, depending on context.

Connect21

The Company's US strategy to build and operate a better energy distribution network for the 21st century digital economy, helping to move to a decarbonised future.

consolidated financial statements

Financial statements that include the results and financial position of the Company and its subsidiaries together as if they were a single

contingent liabilities

Possible obligations or potential liabilities arising from past events for which no provision has been recorded, but for which disclosure in the financial statements is made.

Decatherm, being an amount of energy equal to 1 million British thermal units (BTUs), equivalent to approximately 293 kWh.

Defined benefit, relating to our UK or US (as the context requires) final salary pension schemes.

DC

Defined contribution, relating to our UK or US (as the context requires) pension schemes to which National Grid, as an employer, pays contributions based on a percentage of employees' salaries.

The Department of Energy & Climate Change, the UK Government ministry responsible for energy and climate change.

For most assets and liabilities, deferred tax is the amount of tax that will be payable or receivable in respect of that asset or liability in future tax returns as a result of a difference between the carrying value for accounting purposes in the statement of financial position or balance sheet and the value for tax purposes of the same asset or liability.

delivery body

Under the Energy Act 2013, and secondary legislation which came into force in August 2014, National Grid's electricity system operator function became the EMR Delivery Body. In this role National Grid provides independent evidence and analysis to the UK Government to inform its decisions on the key rules and parameters to achieve the Government's policy objectives under EMR. National Grid also administers the capacity mechanism, including running the annual capacity auctions, manages the allocation of contracts for difference to low carbon generators and reports to the Government annually on performance against the Government's delivery plan.

demand side response (DSR)

Arrangements between the Company and certain customers, through which those customers agree to increase or reduce demand in response to a signal where the Company requires it.

derivative

A financial instrument or other contract where the value is linked to an underlying index, such as exchange rates, interest rates or commodity prices. In most cases, contracts for the sale or purchase of commodities that are used to supply customers or for our own needs are excluded from this definition.

Deposit Agreement

Deposit Agreement means the agreement entered into between National Grid Transco plc (now National Grid plc), the Depositary and the registered holders of ADRs, pursuant to which ADSs have been issued, dated as of 21 November 1995 and amended and restated as of 1 August 2005, and any related agreement.

Depositary

Depositary means The Bank of New York Mellon acting as depositary.

Directors/Executive Directors/Non-executive Directors

The Directors/Executive Directors and Non-executive Directors of the Company whose names are set out on pages 47 and 48 of this document.

dollars or \$

Except as otherwise noted all references to dollars or \$ in this Annual Report and Accounts relate to the US currency.

Definitions and glossary of terms continued

earnings per share (EPS)

Profit for the year attributable to equity shareholders of the parent allocated to each ordinary share.

Electricity Market Reform (EMR)

An energy policy initiative, introduced by the Energy Act 2013, designed to provide greater financial certainty to investors in both low carbon and conventional generation in order to meet environmental targets and maintain security of supply, and to do so at the lowest cost to consumers.

employee engagement

A key performance indicator, based on the percentage of favourable responses to certain indicator questions repeated in each employee survey, which provides a measure of how employees think, feel and act in relation to National Grid. Research shows that a highly engaged workforce leads to increased productivity and employee retention, therefore we use employee engagement as a measure of organisational health in relation to business performance.

Estate Tax Convention

The Estate Tax Convention is the convention between the US and the UK for the avoidance of double taxation with respect to estate and gift

The European Union, being the economic and political union of 28 member states located in Europe.

Exchange Act

The US Securities Exchange Act 1934, as amended.

FERC

The US Federal Energy Regulatory Commission.

A lease where the asset is treated as if it was owned for the period of the lease and the obligation to pay future rentals is treated as if they were borrowings. Also known as a capital lease.

financial year

For National Grid this is an accounting year ending on 31 March. Also known as a fiscal year.

A UK Financial Reporting Standard as issued by the UK Financial Reporting Council (FRC). These apply to the Company's individual

financial statements on pages 168 to 173, which are prepared in accordance with FRS 101.

Grain LNG

National Grid Grain LNG Limited

Great Britain

England, Wales and Scotland.

Group return on equity (Group RoE)

The Group return on equity calculation provides a measure of the performance of the whole Group compared with the amounts invested by the Group in assets attributable to equity shareholders. The Group return on equity measure is calculated using the Group capital employed in accordance with the definition used in the RoCE measures, adjusted $\ensuremath{\mathsf{I}}$ for Group net debt and goodwill.

Gigawatt, being an amount of power equal to 1 billion watts (10^9 watts).

Gigawatt hours, being an amount of energy equivalent to delivering 1 billion watts of power for a period of one hour.

HMRC

HM Revenue & Customs. The UK tax authority.

HVDC

High voltage, direct current electric power transmission which uses direct current for the bulk transmission of electrical power, in contrast with the more common alternating current systems.

IAS or IFRS

An International Accounting Standard or International Financial Reporting Standard, as issued by the International Accounting Standards Board (IASB). IFRS is also used as the term to describe international generally accepted accounting principles as a whole.

individual financial statements

Financial statements of a company on its own, not including its subsidiaries or joint ventures.

joint venture

A company or other entity which is controlled jointly with other parties.

ĸ

Kilovolt, being an amount of electric force equal to 1,000 volts.

Kilowatt, being an amount of power equal to 1,000 watts.

Kilowatt-month, being an amount of energy equivalient to delivering 1kW of power for a period of one month.

LIPA The Long Island Power Authority.

Liquefied natural gas, being natural gas that has been condensed into a liquid form, typically at temperatures at or below -161°C (-258°F).

lost time injury (LTI)

An incident arising out of National Grid's operations which leads to an injury where the employee or contractor normally has time off the following day or shift following the incident. It relates to one specific (acute) identifiable incident which arises as a result of National Grid's premises, plant or activities, which was reported to the supervisor at the time and was subject to appropriate

lost time injury frequency rate (IFR)

The number of lost time injuries per 100,000 hours worked in a 12 month period.

MADPU

The Massachusetts Department of Public Utilities.

The managed services agreement, under which the Company maintained and operated the electricity transmission and distribution system on Long Island owned by LIPA, which was transitioned to a third party with effect from 31 December 2013.

Megawatt, being an amount of power equal to 1 million watts.

Additional Information

National Grid Metering (NGM)

National Grid Metering Limited, National Grid's UK regulated metering husiness.

New England

The term refers to a region within the northeastern US that includes the states of Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island and Vermont. National Grid's New England operations are primarily in the states of Massachusetts and Rhode Island.

The northeastern region of the US, comprising the states of Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island and Vermont.

NYPSC

The New York Public Service Commission.

Ofgem

The UK Office of Gas and Electricity Markets, part of the UK Gas and Electricity Markets Authority (GEMA), which regulates the energy markets in the UK.

Other post-employment benefits.

ordinary shares

Voting shares entitling the holder to part ownership of a company. Also known as common stock. National Grid's ordinary shares have a nominal value of 11 $\frac{17}{43}$ pence.

price control

. The mechanism by which Ofgem sets restrictions on the amounts of revenue we are allowed to collect from customers in our UK businesses. The allowed revenues are intended to cover efficiently incurred operational expenditure, capital expenditure and financing costs, including a return on equity invested.

The 15-year power supply agreement with LIPA which came into effect on 28 May 2013, under which the Company supplies electricity to communities and businesses across Long Island.

rate base

The base investment on which the utility is authorised to earn a cash return. It includes the original cost of facilities, minus depreciation, an allowance for working capital and other accounts.

The term given to the mechanism by which a US utility regulator sets terms and conditions for utility service including, in particular, tariffs and rate schedules. The term can mean a multi-year plan that is approved for a specified period, or an order approving tariffs and rate schedules that remain in effect until changed as a result of future regulatory proceedings. Such proceedings can be commenced through a filing by the utility or on the regulator's own initiative.

regulated controllable operating costs

Total operating costs under IFRS less depreciation and certain regulatory costs where, under our regulatory agreements, mechanisms are in place to recover such costs in current or future periods.

regulatory asset value (RAV)

The value ascribed by Ofgem to the capital employed in the relevant licensed business. It is an estimate of the initial market value of the regulated asset base at privatisation, plus subsequent allowed additions at historical cost, less the deduction of annual regulatory depreciation. Deductions are also made to reflect the value realised from the disposal of certain assets that formed part of the regulatory asset base. It is also indexed to the RPI to allow for the effects of inflation.

return on capital employed (RoCE)

The return on capital employed metric is designed to give an alternative comparison between the UK and US businesses showing the overall return on capital provided by both debt and equity. The calculation reflects regulatory treatments of costs.

return on equity (RoE)

A performance metric measuring returns from the investment of shareholders' funds. It is a financial ratio of a measure of earnings divided by an equity base.

revenue decoupling

Revenue decoupling is the term given to the elimination of the dependency of a utility's revenue on the volume of gas or electricity transported. The purpose of decoupling is to eliminate the disincentive a utility otherwise has to encourage energy efficiency programmes.

RTTO

The revised regulatory framework issued by Ofgem which was implemented in the eight-year price controls which started on 1 April 2013.

The Rhode Island Public Utilities Commission.

The UK retail price index as published by the Office for National Statistics.

Scope 1 greenhouse gas emissions

Scope 1 emissions are direct greenhouse gas emissions that occur from $% \left(1\right) =\left(1\right) \left(1$ sources that are owned or controlled by the Company, for example, emissions from combustion in owned or controlled boilers, furnaces, vehicles, etc.

Scope 2 greenhouse gas emissions

Scope 2 emissions are greenhouse gas emissions from the generation of $% \left\{ 1\right\} =\left\{ 1$ purchased electricity consumed by the Company. Purchased electricity is $% \left(1\right) =\left(1\right) \left(1\right) \left($ defined as electricity that is purchased or otherwise brought into the organisational boundary of the Company. Scope 2 emissions physically occur at the facility where electricity is generated.

Scope 3 greenhouse gas emissions

Scope 3 emissions are indirect greenhouse gas emissions as a consequence of the operations of the Company, but are not owned or controlled by the Company, such as emissions from third-party logistics providers, waste management suppliers, travel suppliers, employee commuting, and combustion of sold gas by customers.

The US Securities and Exchange Commission, the financial regulator for companies with registered securities in the US, including National Grid and certain of its subsidiaries.

The Safety, Environment and Health Committee of the Board whose role is explained on page 60.

Sulphur hexafluoride, an inorganic, colourless, odourless and nonflammable greenhouse gas. SF_6 is used in the electrical industry as a gaseous dielectric medium for high voltage circuit breakers, switchgear and other electrical equipment. The Kyoto protocol estimated that the global warming potential over 100 years of SF₆ is 23,900 times more potent than that of CO_2 .

The difference between the amount shares are issued for and the nominal value of those shares.

standard cubic metre

A quantity of gas which at 15°C and atmospheric pressure (1.013 bar) occupies the volume of 1m3.

stranded cost recoveries

The recovery of historical generation-related costs in the US, related to generation assets that are no longer owned by us.

Science, technology, engineering and mathematics; the Company is currently looking to recruit people with skills in these subjects.

A company or other entity that is controlled by National Grid.

swaption

A swaption gives the buyer, in exchange for an option premium, the right, but not the obligation, to enter into an interest rate swap at some specified date in the future. The terms of the swap are specified on the trade date of the swaption.

taxes borne

Those taxes that represent a cost to the Company and which are reflected in our results.

Those taxes that are generated by our operations but which do not affect our results; we generate the commercial activity giving rise to these taxes and then collect and administer them on behalf of HMRC.

Tax Convention

Tax Convention means the income tax convention between the US and the IIK

A unit of mass equal to 1.000 kilogrammes, equivalent to approximately 2,205 pounds.

tonnes carbon dioxide equivalent (CO2e)

A measure of greenhouse gas emissions in terms of the equivalent amount of carbon dioxide.

treasury shares

Shares that have been repurchased but not cancelled. These shares can then be allotted to meet obligations under the Company's employee share

tonne

Terawatt hours, being an amount of energy equivalent to delivering 1 billion watts of power for a period of 1,000 hours.

UK

The United Kingdom, comprising England, Wales, Scotland and Northern Ireland.

UK Corporate Governance Code (the Code)

Updated guidance, issued by the Financial Reporting Council in September 2014, on how companies should be governed, applicable to UK listed companies, including National Grid.

UK GAAP

Generally accepted accounting principles in the UK. These differ from IFRS and from US GAAP.

UK regulated return on equity (UK RoE)

UK regulated return on equity is a measure of how a business is performing operationally against the assumptions used by Ofgem. These returns are calculated using the assumption that the businesses are financed in line with the regulatory adjudicated capital structure, at the assumed cost of debt and that UK taxation paid is at the level assumed by Ofgem.

The United States of America, its territories and possessions, any state of the United States and the District of Columbia.

Generally accepted accounting principles in the US. These differ from IFRS and from UK GAAP.

US regulated return on equity (US RoE)

US regulated return on equity is a measure of how a business is performing operationally against the assumptions used by the relevant regulator. This US operational return measure is calculated using the assumption that the businesses are financed in line with the regulatory adjudicated capital structure. This is a post-tax US GAAP metric as calculated annually (on a calendar year to 31 December).

US state regulators (state utility commissions)In the US, public utilities' retail transactions are regulated by state utility commissions, including the New York Public Service Commission (NYPSC), the Massachusetts Department of Public Utilities (MADPU) and the Rhode Island Public Utilities Commission (RIPUC).

v

value added

Value added is a measure to capture the value created through investment attributable to equity holders, being the change in total regulated and non-regulated assets including goodwill (both at constant currency) plus the cash dividend paid in the year plus share repurchase costs less the growth in net debt (at constant currency). This is then presented on an absolute and a per share basis.

Value growth is the growth in the value of our regulated and nonregulated assets including goodwill plus dividend plus share repurchase costs less net debt, as a percentage.

Dividends

The Directors are recommending a final dividend of 28.34 pence per ordinary share (\$2.0445 per ADS) to be paid on 10 August 2016 to shareholders on the register as at 3 June 2016. Further details in respect of dividend payments can be found on page 24. If you live outside the UK, you may be able to request that your dividend payments be converted into your local currency.

Under the Deposit Agreement, a fee of up to 0.05 per ADS can be charged for any cash distribution made to ADS holders, including cash dividends. ADS holders who receive cash in relation to the 2015/16 final dividend will be charged a fee of \$0.02 per ADS by the Depositary prior to the distribution of the cash dividend.

Have your dividends paid directly into your bank or building society account:

- Your dividend reaches your account on the payment day
- It is more secure cheques do sometimes get lost in the post
- No more trips to the bank

Elect to receive your dividends as additional shares:

- Join our scrip dividend scheme
- No stamp duty or commission to pay

Flectronic communications

To receive an email notifying you as soon as new shareholder information is available to view online, including your electronic tax voucher, sign up for electronic communications. Simply go to the National Grid share portal www.nationalgridshareholders.com and once you have registered, click on the 'manage your account' link and follow the on screen instructions to change your communication preference.

Manage your shareholding online via the National Grid share portal:

- Have your dividends paid direct to your bank account instead of receiving cheques
- Choose to receive your dividends in shares, via our scrip dividend scheme
- Register your AGM vote
- Get copies of your dividend confirmations and view your dividend payment history
- Update your address details

Registered office

National Grid plc was incorporated on 11 July 2000. The Company is registered in England and Wales No. 4031152, with its registered office at 1-3 Strand, London WC2N 5EH.

Capita Share Dealing Services offer our European Economic Area resident shareholders a range of quick and easy share dealing services by post, online or telephone from 10p per share (plus stamp duty as applicable). Dealing at live prices is available online or by telephone, different fees apply.

Visit www.capitadeal.com/nationalgrid or call Capita Share Dealing free on 0800 022 3374 for details and terms and conditions. This is not a recommendation to take any action. High street banks may also offer share dealing services. If you have any doubt as to what action you should take, please contact an authorised financial advisor.

ShareGift: If you only have a small number of shares which would cost more for you to sell than they are worth, you may wish to consider donating them to the charity.

ShareGift is a registered charity (no. 1052686) which specialises in accepting such shares as donations. For more information visit www.sharegift.org.uk or contact Capita Asset Services.

Cautionary statement

This document comprises the Annual Report and Accounts for the year ending 31 March 2016 for National Grid and its subsidiaries.

It contains the Directors' Report and Financial Statements, together with the independent auditors' report thereon, as required by the Companies Act 2006. The Directors' Report, comprising pages 08 to 81 and 174 to 202, has been drawn up in accordance with the requirements of English law, and liability in respect thereof is also governed by English law. In particular, the liability of the Directors for these reports is solely to National Grid.

This document contains certain statements that are neither reported financial results nor other historical information. These statements are forward-looking statements within the meaning of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended. These statements include information with respect to our financial condition, our results of operations and businesses, strategy, plans and objectives. Words such as 'anticipates', 'expects', 'should', 'intends', 'plans', 'believes', 'outlook', 'seeks', 'estimates', 'targets', 'may', 'will', 'continue', 'project' and similar expressions, as well as statements in the future tense, identify forward-looking statements. These forward-looking statements are not guarantees of our future performance and are subject to assumptions, risks and uncertainties that could cause actual future results to differ materially from those expressed in or implied by such forward-looking statements. Many of these assumptions, risks and $\,$ uncertainties relate to factors that are beyond our ability to control or estimate precisely, such as changes in laws or regulations, announcements from and decisions by governmental bodies or regulators (including the timeliness of consents for construction projects); the timing of construction and delivery by third parties of new generation projects requiring connection; breaches of, or changes in, environmental, climate change and health and safety laws or regulations, including breaches or other incidents arising from the potentially harmful nature of our activities; network failure or interruption, the inability to carry out critical non network operations and damage to infrastructure, due to adverse weather conditions including the impact of major storms as well as the results of climate change, due to counterparties being unable to deliver physical commodities, or due to the failure of or unauthorised access to or deliberate breaches of our IT systems and supporting technology; performance against regulatory targets and standards and against our peers with the aim of delivering stakeholder expectations regarding costs and efficiency savings, including those related to investment programmes and internal transformation and remediation plans; and customers and counterparties (including financial institutions) failing to perform their obligations to the Company. Other factors that could cause actual results to differ materially

from those described in this document include fluctuations in exchange rates, interest rates and commodity price indices; restrictions and conditions (including filing requirements) in our borrowing and debt arrangements, funding costs and access to financing; regulatory requirements for us to maintain financial resources in certain parts of our business and restrictions on some subsidiaries' transactions such as paying dividends, lending or levying charges; inflation or deflation; the delayed timing of recoveries and payments in our regulated businesses and whether aspects of our activities are contestable; the funding requirements and performance of our pension schemes and other post-retirement benefit schemes; the failure to attract, train or retain employees with the necessary competencies, including leadership skills, and any significant disputes arising with our employees or the breach of laws or regulations by our employees; the failure to respond to market developments, including competition for onshore transmission, the threats and opportunities presented by emerging technology, development activities relating to changes to the energy mix and the integration of distributed energy resources and the need to grow our business to deliver our strategy, as well as incorrect or unforeseen assumptions or conclusions (including unanticipated costs and liabilities) relating to business development activity, including assumptions in connection with joint ventures.

For further details regarding these and other assumptions, risks and uncertainties that may affect National Grid, please read the Strategic Report and the Risk factors on pages 183 to 186 of this document. In addition, new factors emerge from time to time and we cannot assess the potential impact of any such factor on our activities or the extent to which any factor, or combination of factors, may cause actual future results to differ materially from those contained in any forward-looking statement. Except as may be required by law or regulation, the Company undertakes no obligation to update any of its forward-looking statements, which speak only as of the date of this document.

Further Information

Exchange Rates

The following table sets forth the history of the exchange rates of one pound sterling to US dollars for the periods indicated and as at the latest practicable date, 3 June 2015.

	<u>High</u>	Low
June 2016*	1.4517	1.4414
May 2016	1.4714	1.4351

^{*} For the period to 3 June 2016.

Share ownership

At 3 June 2016, the latest practicable date, none of the directors had an individual beneficial interest amounting to greater than 1% of the Company's shares.

Material interests in shares

The following summarizes the significant changes in the percentage ownership held by our major shareholders during the past three years:

Capital Group Companies, Inc. held 10.02% of our outstanding share capital as at 12 June 2012 Their shareholding increased to 10.91% of our outstanding share capital as at 31 March 2013, 11.02% as at 5 April 2013, 11.03% as at 31 March 2014 and then such holdings decreased to 4.981% as at 31 March 2015 and then to 3.881% as at 20 April 2015. As noted on page 189 of the 2015/2016 Annual Report and Accounts, we have been notified that Capital Group Companies, Inc. held 3.88% of our outstanding share capital as at 31 March 2015 and such holdings remains unchanged as at 3 June 2016.

Black Rock, Inc. has held 5.21% of our outstanding share capital as at 5 June 2014 and 5 June 2015. As noted on page 189 of the 2015/2016 Annual Report and Accounts, we have been notified that Black Rock, Inc. held 5.88% of our outstanding share capital as at 31 March 2016 and such holdings decreased as at 26 May 2016 to 3.92% which percentage remains unchanged as at 3 June 2016

Since 31 March 2016, we have not been notified of any other subsequent significant change in the percentage of shares held by the shareholders, listed on page 189 of the 2015/2016 Annual Report and Accounts

Material interest in American Depositary Shares

As at 3 June 2016, we had 14,857 registered holders of our American Depositary Shares (ADSs) representing ownership of 10.9% of our issued and outstanding share capital, excluding ordinary shares held in treasury. As at 3 June 2016, based on information available to us, we believe that approximately 10.9% of our issued and outstanding share capital (whether in the form of shares or ADSs), excluding shares held in treasury, was held beneficially in the United States.

Price history

The following table sets forth the highest and lowest intraday market prices for our ordinary shares and ADSs for the periods indicated.

	Ordinary	Ordinary Share			
	(Pen	(Pence)		ADS (\$)	
	High	Low	High	Low	
June 2016*	1011.50	959.60	72.14	70.09	
May 2016	1015.50	953.01	74.67	71.48	

^{*} For the period to 3 June 2016, the latest practicable date.
